Very Good

Univariate analysis:

Analyses of data on the base of single variable is called univariable analysis.

$X = X_1, X_2, X_3, ----, X_n$

Bivariate analysis:

Investigating relationship's between two variables is called bivariatble analysis.

Plott the data on the graph paper. Pattern suggest the relationship between variables.

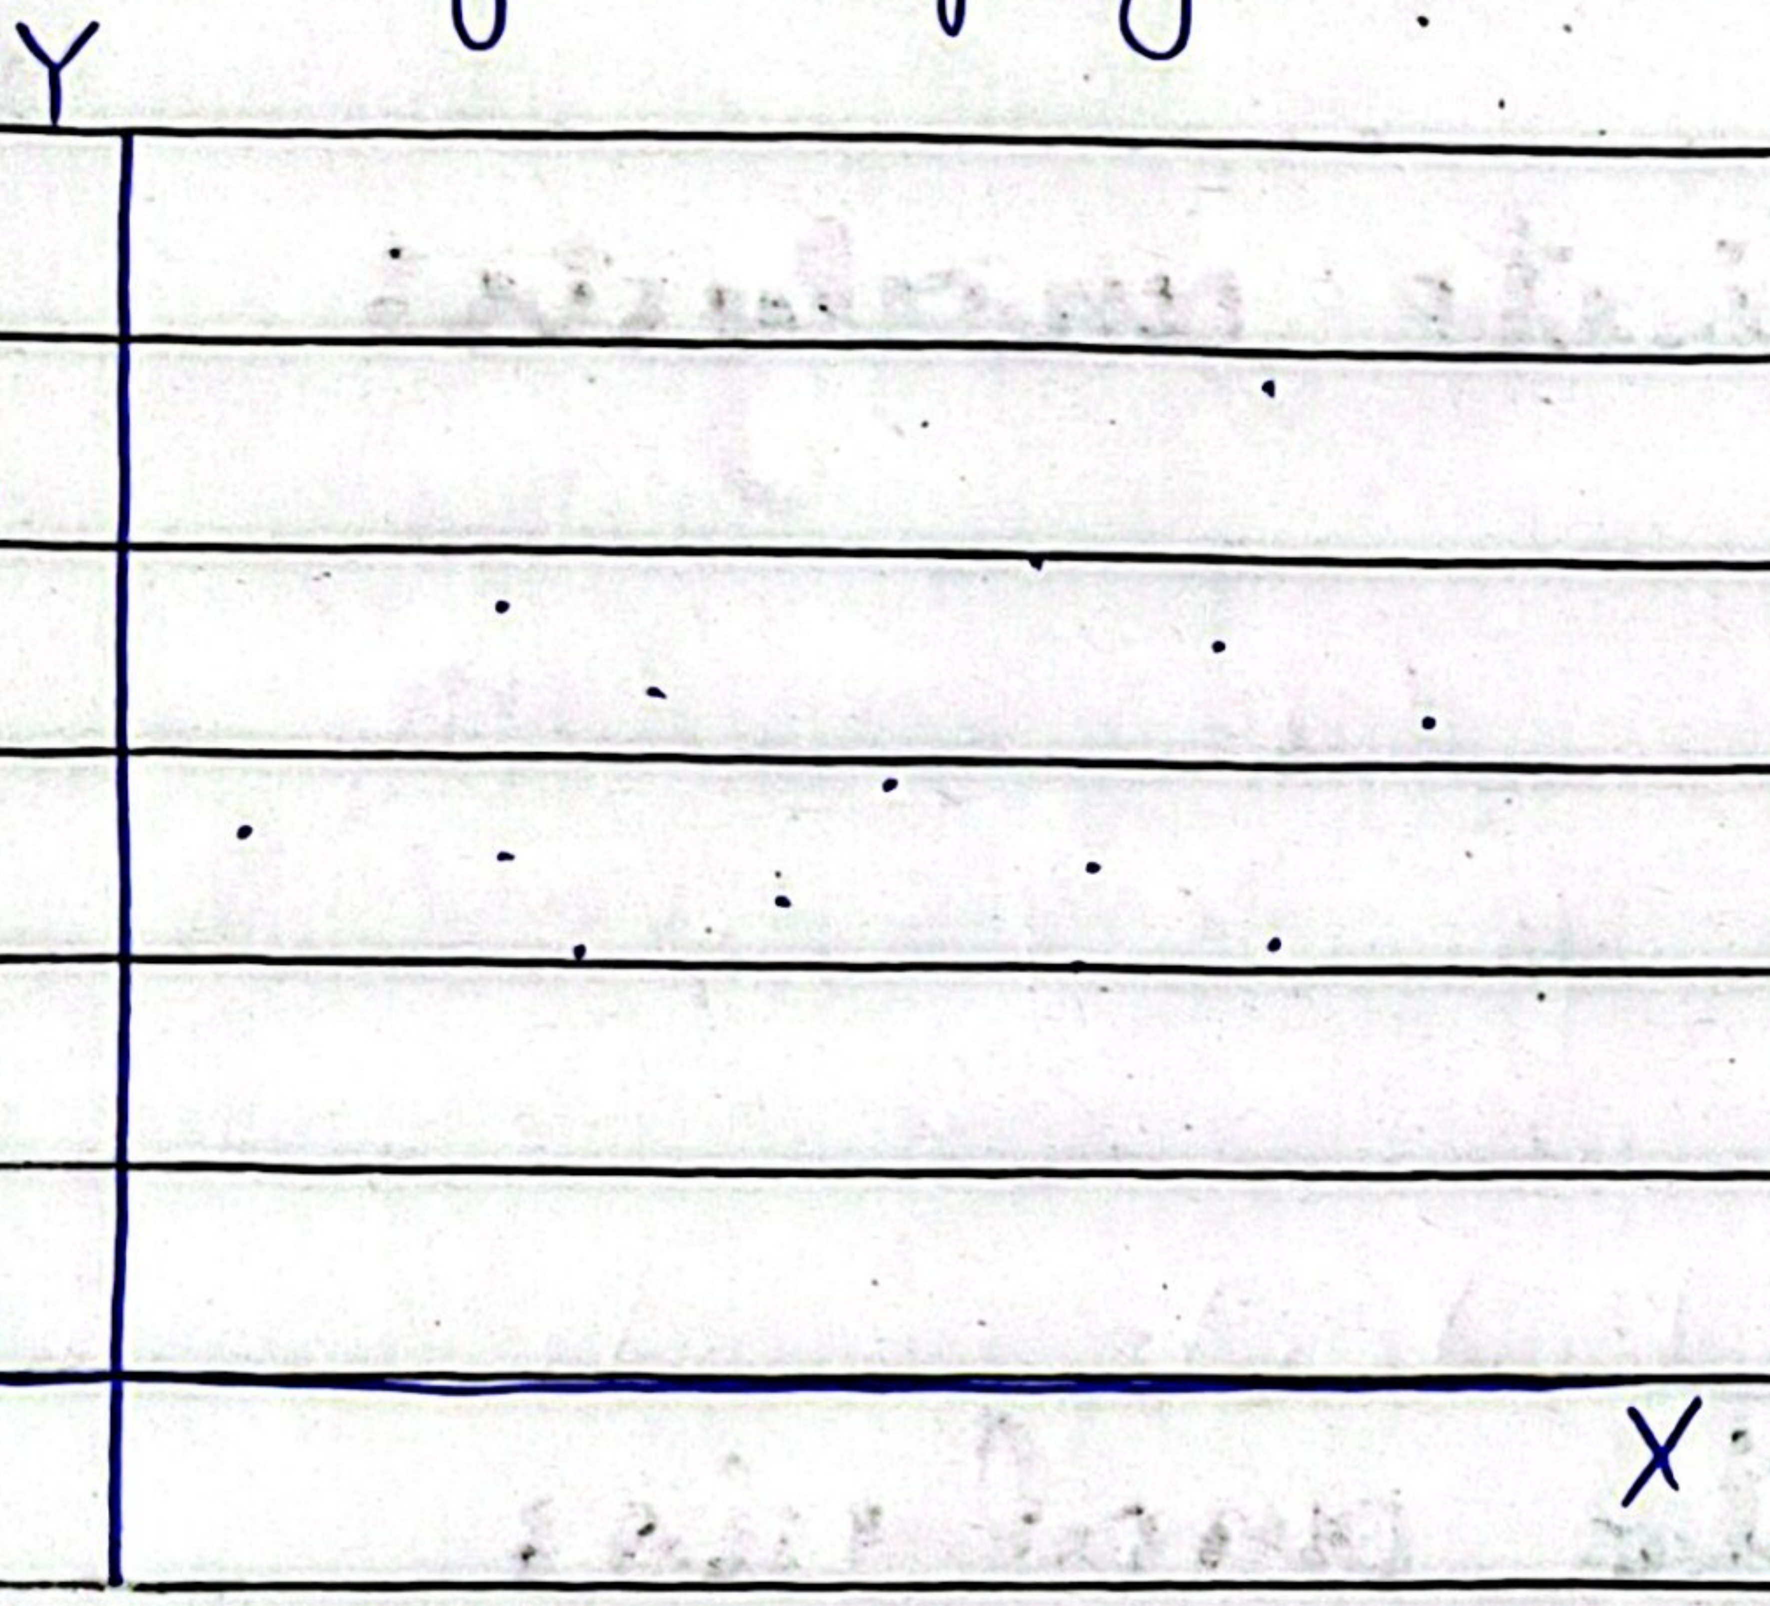
Pairs = $(x_1 y_1), (X_2, Y_2), (X_3, Y_3), --(X_n Y_n)$.

Set of "n" ordered pairs.

DAY: DATE:

Scatter / Plot Diagram:

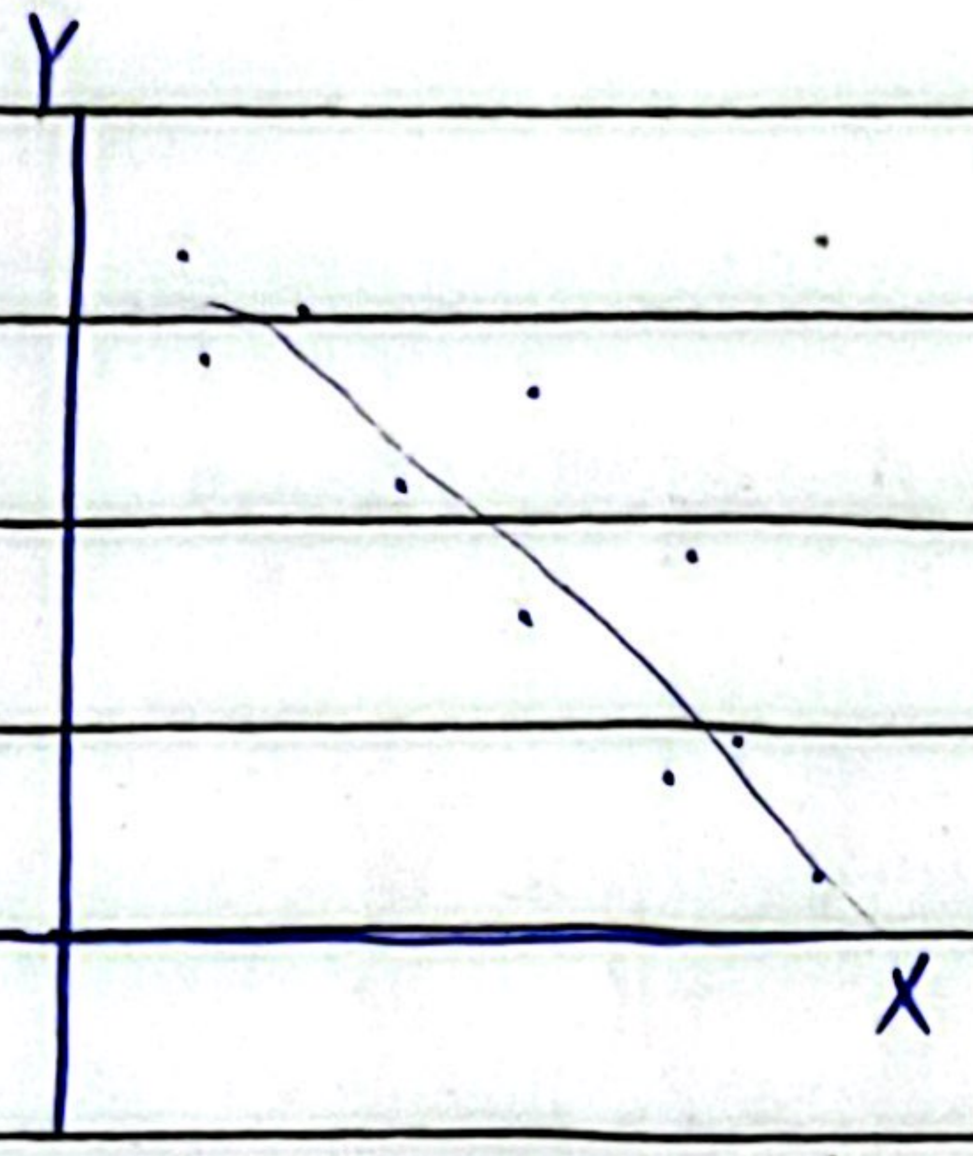
Graphical representation of "n" ordered pairs is called scatter polot or diagram. Pairs got displayed in the form of dot.

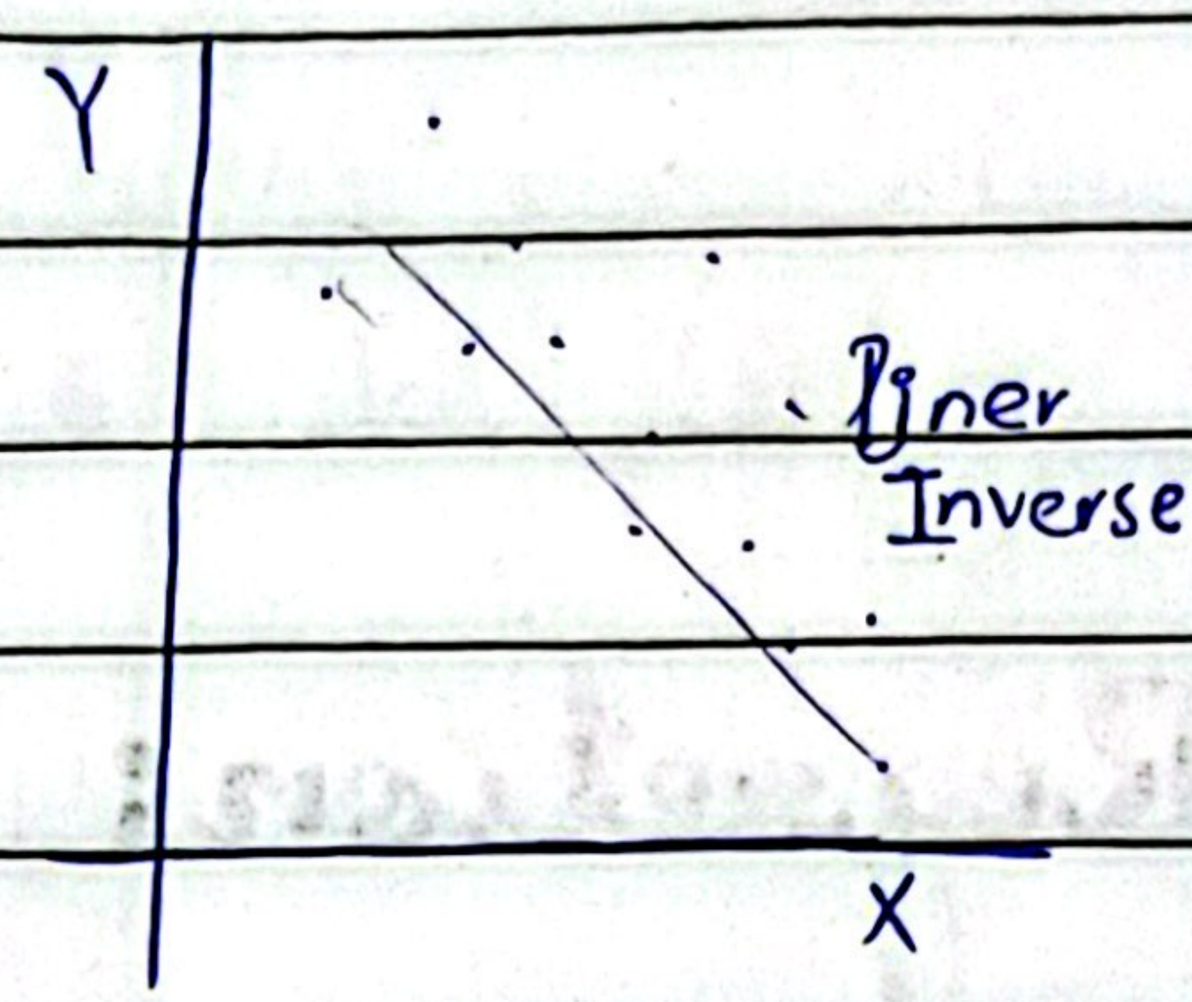


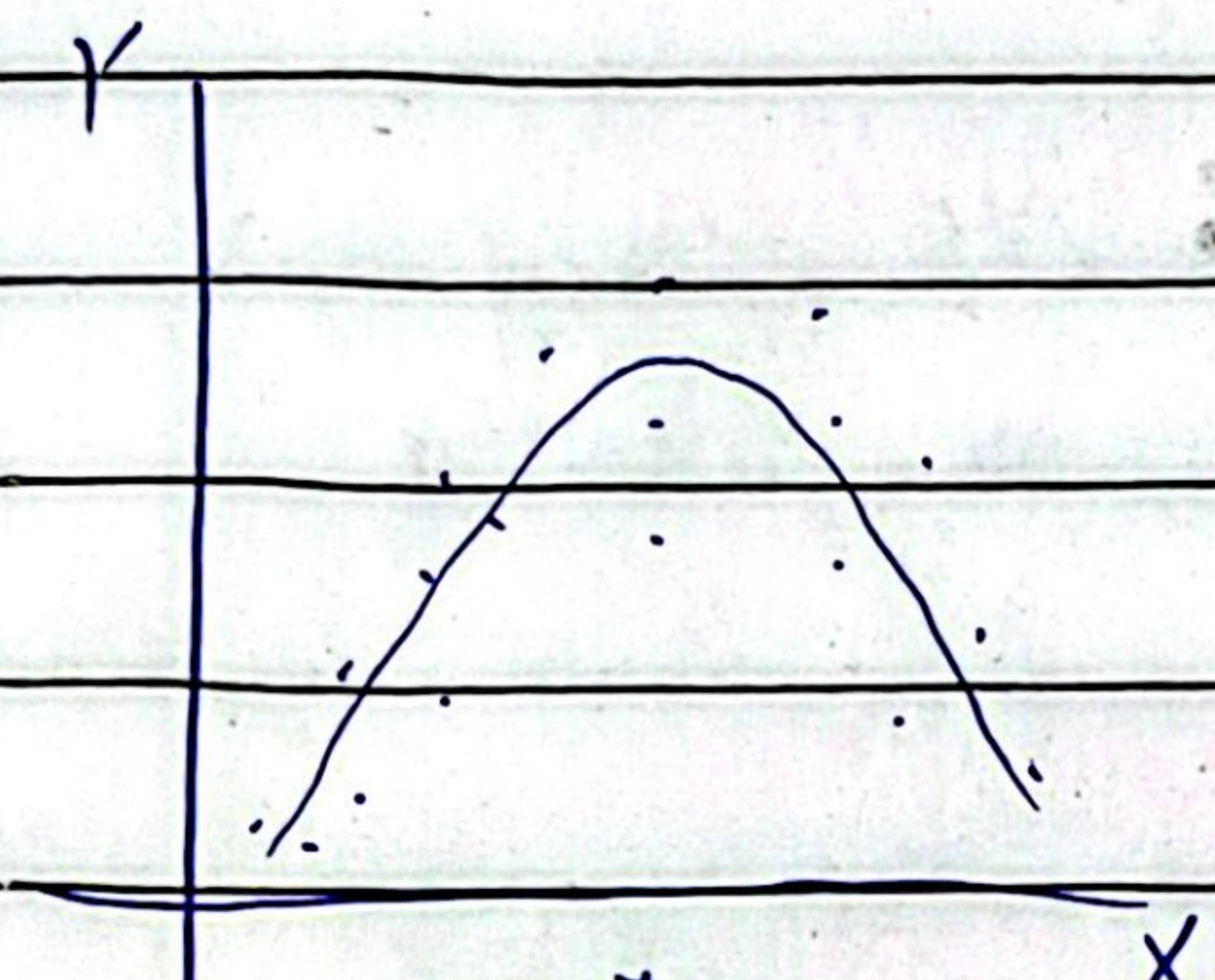
Dot applied up on the point of intersection.

Is drawn by taking independent variable only X-axis and dependent variables on the Y-axis. Representing the pairs by dot's, points on the graph paper.

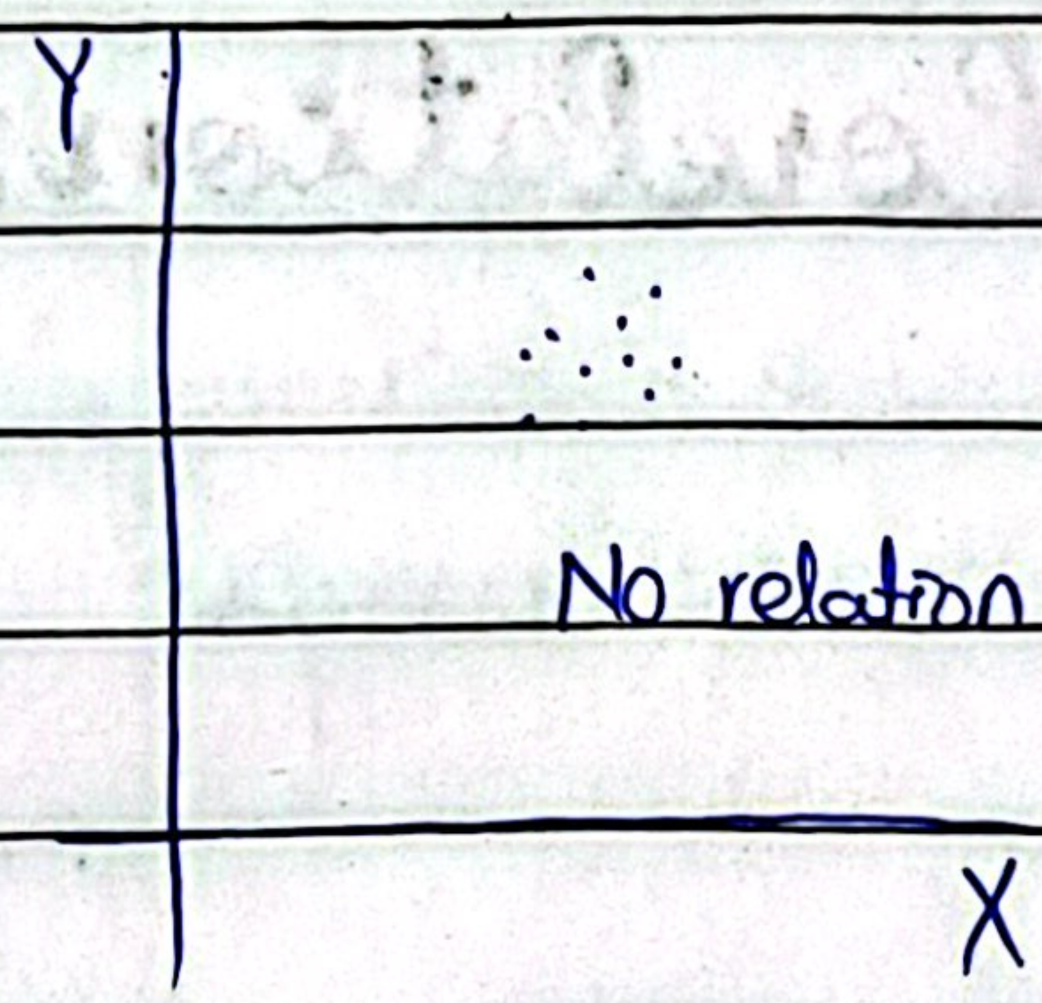
DAY: ______ DATE: ______

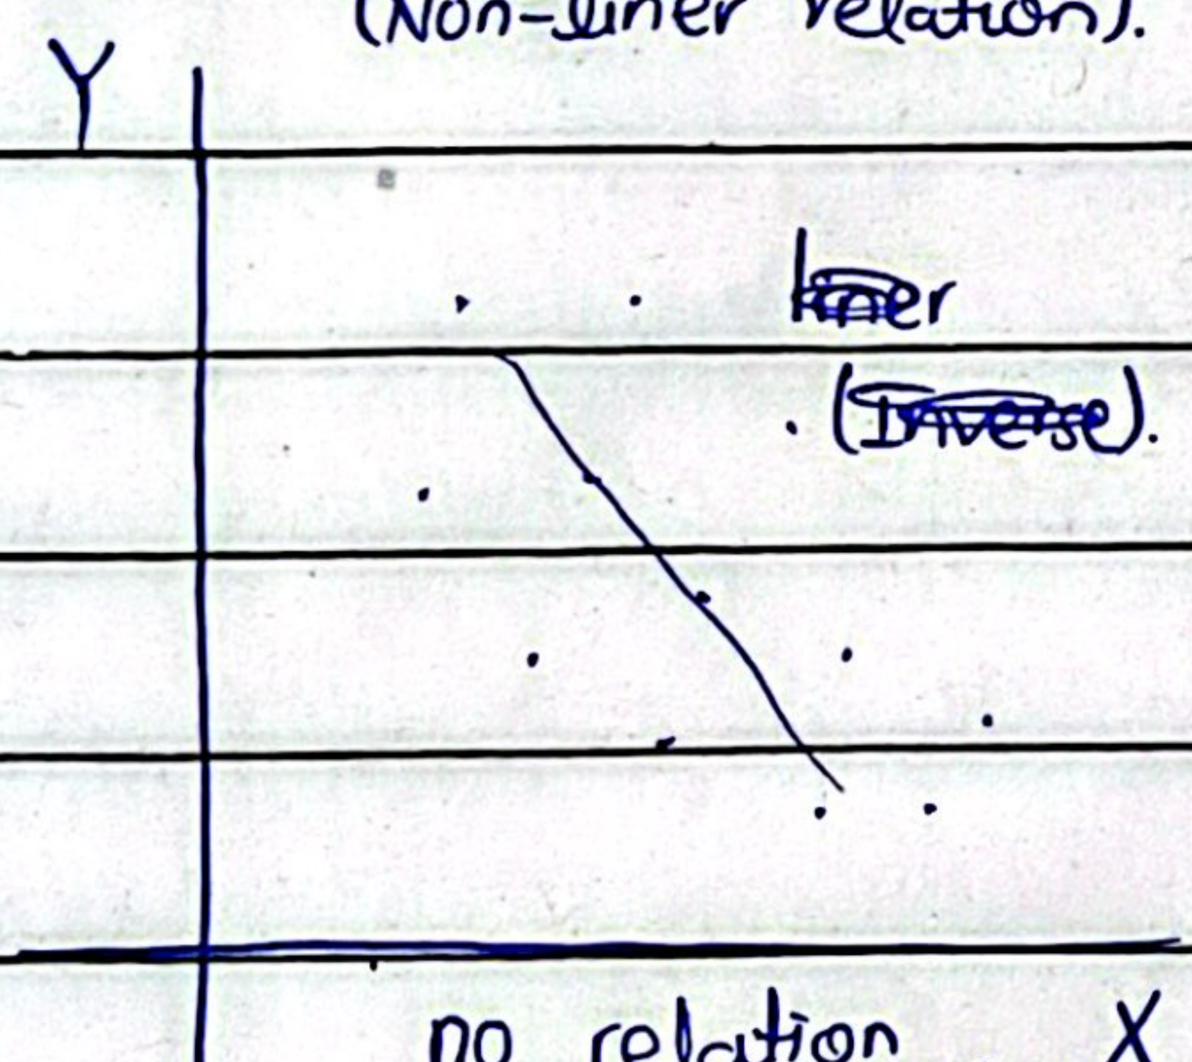




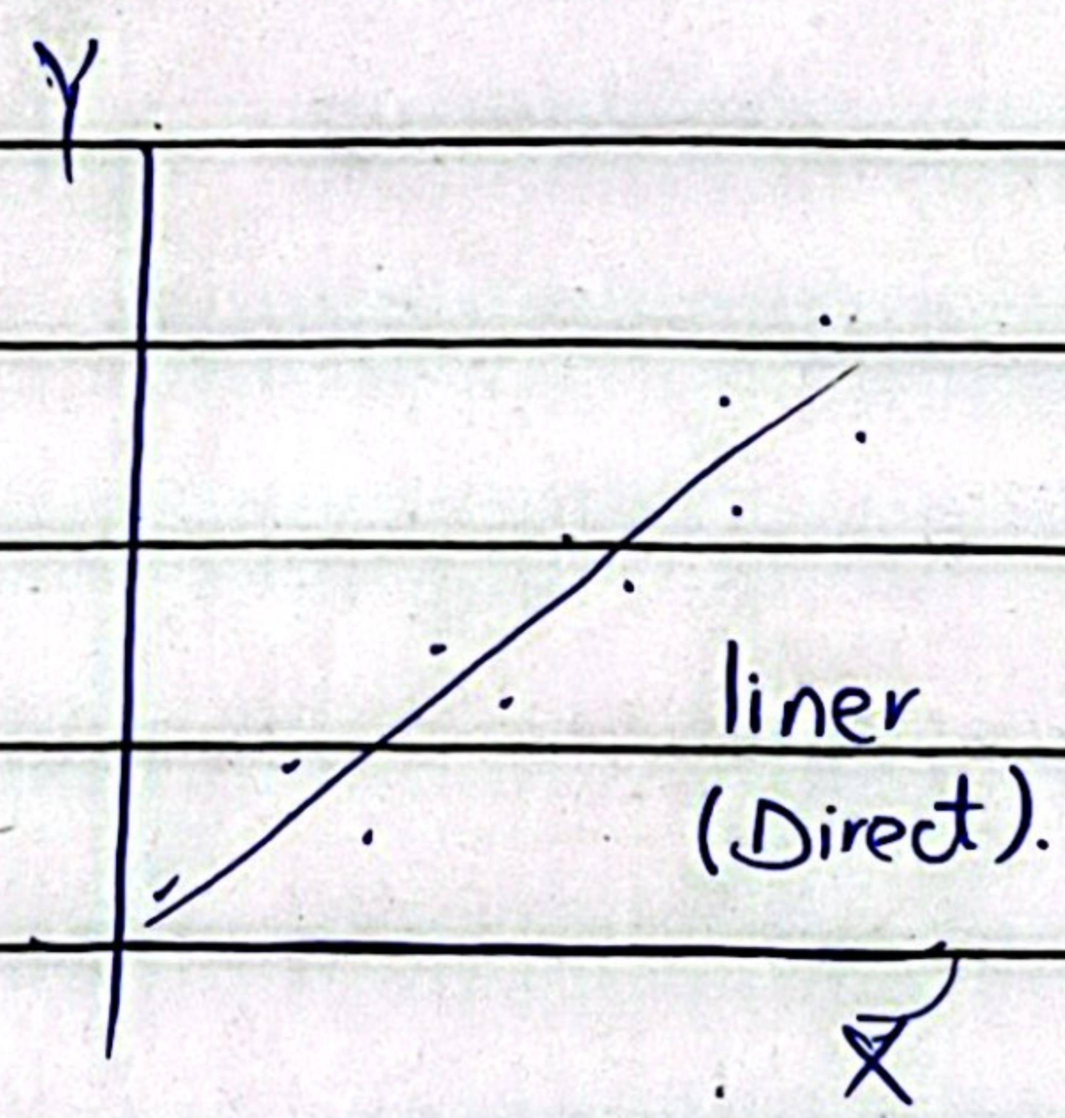


curvature
(Non-liner relation).





no relation
got establish.



⇨ Perfect Relation

⇨ Imperfect Relation

Regretion
- Liner Regretion
- Non Liner Regretion.

DAY: ______ DATE: ______

We have to find out the strength of the relationship

Regretion: Which type of relation is there.

Corelation: We study up the strength of the relationship.
