Date _____

Environmental Pollution

"It can be defined as any undesirable change in physical, chemical or biological characteristics of any component of the environment i.e. air, water, soil which can cause harmful effects on various forms of life or property."

- It can be created naturally or artificially.
- It results from human activities such as :
 - Industrial production
 - Transportation
 - Agriculture
 - Waste disposal

Pollution

"When harmful substances contaminate the environment, it is called as pollution."

Date _____

➡ Pollution refers to the very bad condition of environment in terms of quality & quantity.

Pollutants

"Any substance causing nuisance, harmful effects or uneasiness to the organism, then that particular substance may be called as pollutant."

Types of Pollutant:

There are two types of pollutants:

- Primary pollutants
- Secondary pollutants

Primary pollutants:

"Those pollutants which are emitted directly from the source and persist in the form they were added to environment."

Date _____

Example:

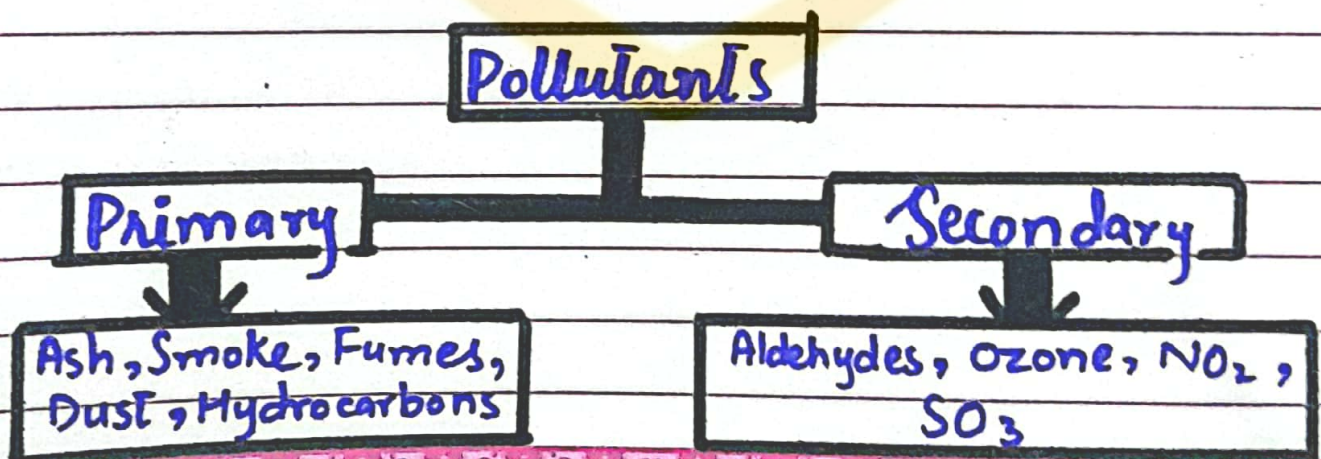

• Ash • Smoke • Fumes • Hydrocarbons • Dust

Secondary pollutants:

"Those pollutants which are formed by the primary pollutants by chemical interaction with some constituent available in atmosphere."

Example:

• Aldehydes • Ozone • Nitrogen dioxide
• Sulphur trioxide

Date _____

Important Pollutants:

- Deposited matter : smoke, dust etc.
- Gases : SO_2 , CO , H_2S etc.
- Chemical compounds
- Metals : Lead, Zinc, Iron etc.
- Fertilizer : Urea, Ammonium Sulphate etc.
- Noise
- Sewage etc.

Causes of Pollution:

- Human Activity
- Population explosion
- Industries
- Automobiles
- Smoke
- Pesticides
- Fertilizers
- Sewage etc.

Date _____

Global Importance

- Environmental Pollution is a global issue that can have many negative impacts on the health of humans & environment.
- It poses significant risks to public health, ecosystems & economic development.

Health:

- Pollution is the leading environmental cause of diseases and premature death, causing more than 9 million deaths each year.
- According to WHO, air pollution alone causes around 7 million premature deaths annually.
- Exposure to lead and other chemicals can cause cardiovascular diseases.

DATE:-

Types of Pollution

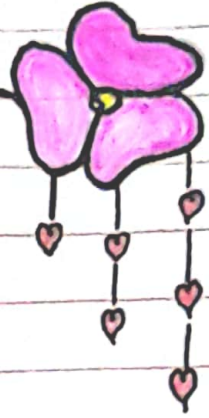

Air Pollution

Water Pollution

Noise Pollution

Land Pollution

Roll No 18

Types of Pollution:-

The main types of pollution are given below:

- Air Pollution
- Water Pollution
- Noise Pollution
- Land Pollution
- Radioactive Pollution
- Soil Pollution

1- Air Pollution:

The befouling of air by anything produced by humans which is or may be harmful to human life and other living organisms is called "air pollution".

Causes :

Major sources of Air pollution are given below.

- Industries
- Automobiles and Domestic fuels
- Dust
- Smoke
- Carbon black
- Aerosols

Effects :

Air Pollution effects??

- * Human health
- * Animals
- * Plants
- * Global warming
- * Acid Rain
- * Various respiratory illnesses

Prevention

Yes, we can Prevent or Avoid Pollution As Follows:

- Use Natural Gas like LPG
- Do not Brest Cookers
- Use less amount of fuel for Vehicles.
- Avoid using and use electric stoves (bio gas)

2= Water Pollution

"The befauling of water by anything produced by humans which is or may be harmful to living organisms is called water Pollution."

Causes

Major causes of water pollution are given below:

- Caused by organic and inorganic industrial wastes and effluents discharged into river
- Sewage or wastewater
- Agriculture runoff
- Domestic waste.

Effects:

Effects of water pollution are given below:

- Diseases like Cholera
- Malaria
- Typhoid
- Aquatic life gets destroyed

Prevention:

The main Preventions of water Pollution are given below:

- Caused by organic and inorganic industrial wastes and effluents discharged into river
- Sewage or wastewater
- Agriculture runoff
- Domestic waste.

Effects:

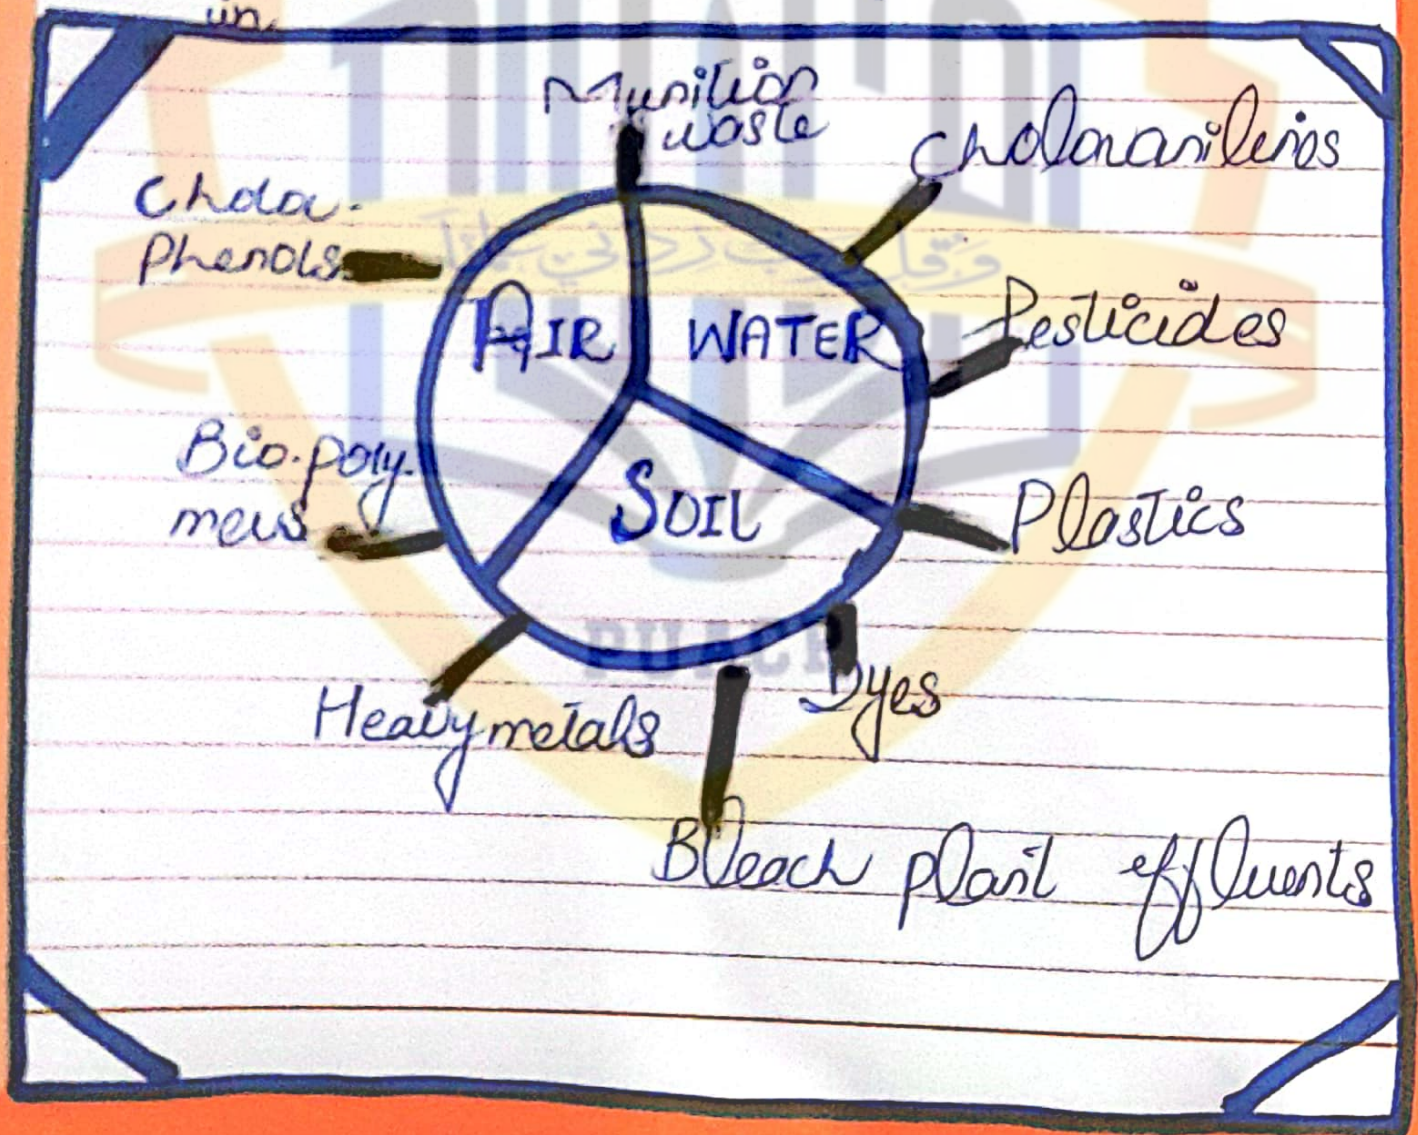

Effects of water pollution are given below:

- Diseases like Cholera
- Malaria
- Typhoid
- Aquatic life gets destroyed

Prevention:

The main Preventions of water Pollution are given below.

- Dams and embankments must be created.
- Rivers must not be contaminated.
- In rivers dead bodies shouldn't thrown.
- Rivers should not be used for washing clothes or bathing animals in.

DATE:-

Roll No 99

3- Noise Pollution:

"The befauling of environ-
ment by anything produced by
humans which is or may be
harmful to human life and
other living organisms through
unwanted or excessive sounds."

Causes

The main causes of
noise pollution are given below:

- Traffic Noise
- Aircraft Noise
- Noise from industries
- Noise from construction and civil engineering works.

DATE:-

Effects

Effects of noise pollution are given below:

- Hearing loss
- High Blood Pressure
- Stress
- Sleep Disturbance
- Colour Blindness

Preventions

The main Preventions of noise pollution are given below:

- The sound horn symbol is to be in School Roads.
- Use of ear protection devices.
- Isolation or use of baffles.
- Airports must be away from residential areas.

DATE:-

4. Land Pollution:

"The befouling of land by anything produced by humans which is or may be harmful to human life and other organisms is called land pollution."

Causes:

We can classify major sources in the following categories:

- Household Garbage
- Urbanization and Concentration of Population.
- Municipal Solid Waste.
- Industrial Waste and Hazardous Waste.
- Deforestation.

DATE: _____

Effects:

The main effects of land Pollution are given below:

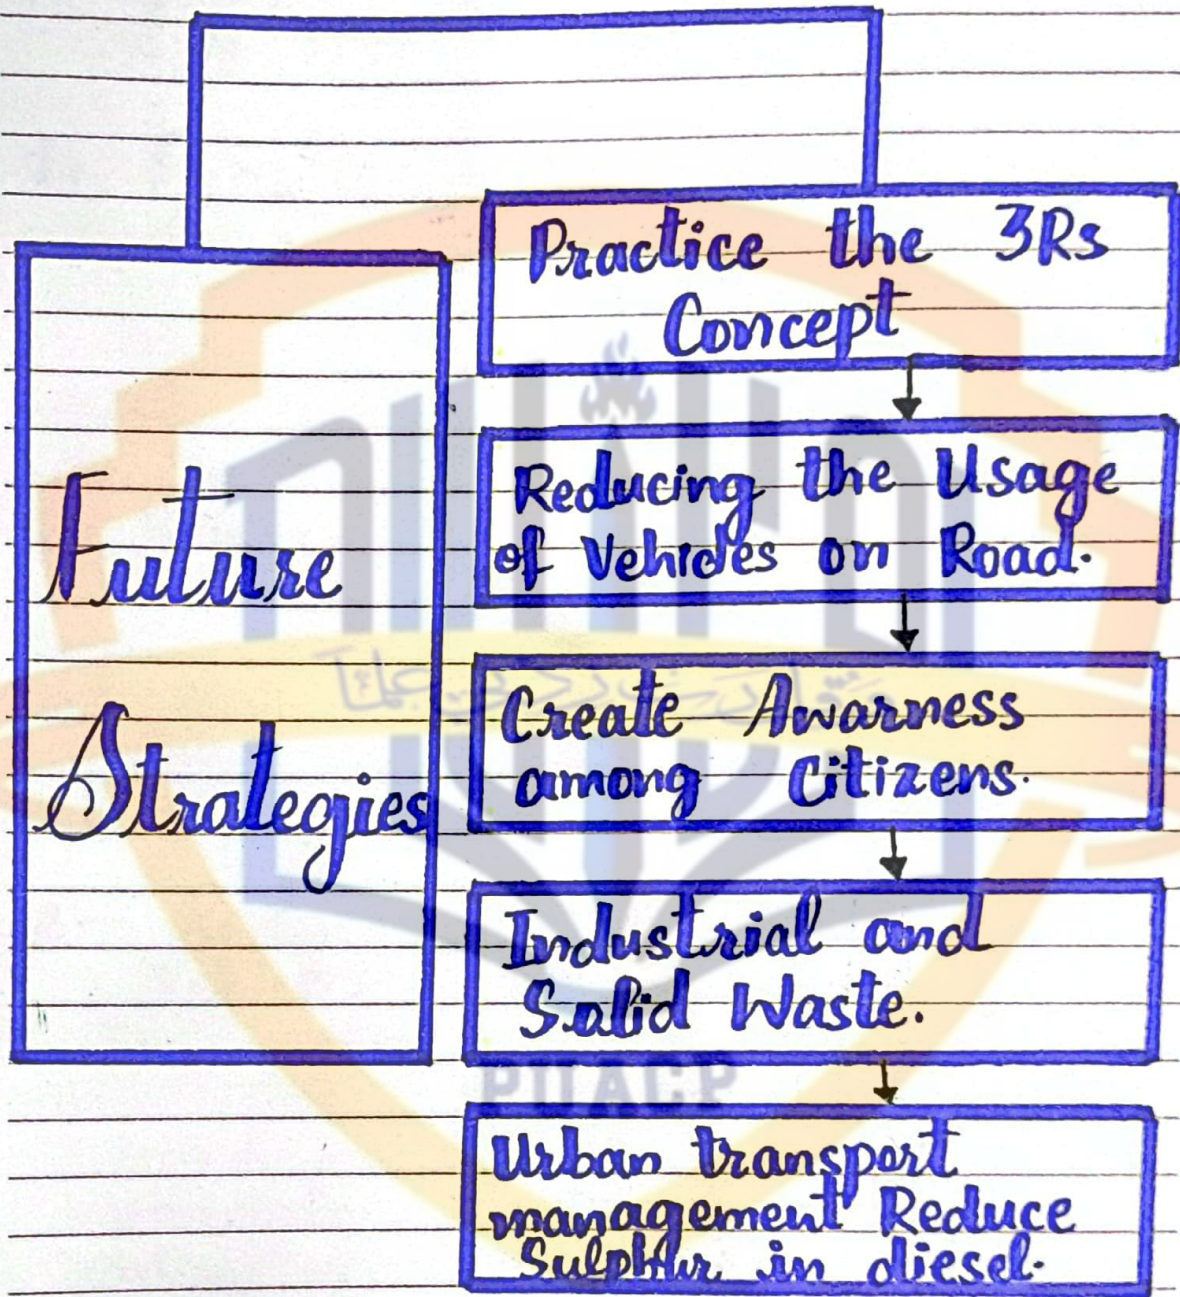

- Land cannot use to built houses
- Man cannot be farming
- Ground water will gets affected
- Death of animals that inhabit land

Preventions:

The main preventions of land pollution are given below:

- * Trees should be planted everywhere.
- * Prevention of erosion and sitting
- * Good agricultural practices
- * Avoid using more fertilizers and Pesticides.

Date:

ZOHRAIB NOTES

Date:

Future Strategies:-

1- Practice The 3Rs Concept:-

① Reduce:-

Use of air-Conditioners as it will release harmful gases, for ozone depletion chlorofluorocarbons which will result in reducing air-pollution.

② Reuse:-

Reusable items like plastic bags, bottles, boxes etc.

③ Recycle:-

Recycleable items such as glass, cans and newspapers.

2- Reducing the Usage of Vehicles on Road:-

The more the usage of vehicles, the more the harmful gases released into the air such as hydrocarbons, nitrogen oxides, carbon monoxides and Sulphur-dioxides. Walk, cycle, car-pooling, usage of public transport.

ZOHAIIB NOTES

Date:

3- Create awareness among citizens:-

Awareness campaigns e.g "Go Green", "Earth Hour"; education - The residents of Country should also try and do their part and put in at least one day of litter picking up.

4- Industrial And Solid waste management:-

The government should take appropriate measures to monitor emission limits reducing pollution control the industries might be given both technical and financial support for introducing mitigation measures, promoting green technologies using less pollution technologies and recycling the waste.

5- Urban Transport Management:-

Should strengthen vehicle emission standards, Complete the emission inventory and conduct an

ZOHAIK NOTES

Date:

investigation, on the emission-control measures Auto-rickshaw must be restricted - Government must replace old vehicles, two-stroke engine vehicles, improve traffic conditions and promote an efficient alternative public transportation Services.

6- Reduce Sulphur in diesel:-

Necessary steps should be taken to remove sulphur content from diesel through (HDS) hydro-de-sulphurization process catalytic converters should be installed in every vehicle.

Date:

Summary:-

①

Environmental pollution is causing a lot of distress not only to humans but also animals, driving many animal species to endangered and even extinction.

②

Everything on our planet is interconnected and while the nature supplies us with valuable environmental services without which we cannot exist, we all depend on each other's actions and the way we treat natural resources.

③

We are hugely overspending our current budget of natural resources at the existing rate of its exploitation, there is no way for the environment to recover and continue "performing well" in the future.
