

Specialization in one Game

1- Complete introduction of one game, it's rule and regulations

Hockey

Hockey is a family of sports that involve using a curved stick to hit a ball or puck towards a goal and prevent the opposing team from doing the same . a game played on an ice rink by two opposing teams of six skaters each who try to knock a flat round puck into the opponents' goal with angled sticks. There are three main types of hockey:

Field Hockey: Played on a grass or artificial turf field with a ball. Teams consist of 11 players each. Field hockey is a global sport and is included in the Summer Olympics.

Ice Hockey: Played on an ice rink with a vulcanized rubber puck. Players wear ice skates and fast-paced action with physical contact is a hallmark of the game. Six players from each team are typically on the ice at a time. Ice hockey is a major sport in North America, Europe, and parts of Asia, and is featured in the Winter Olympics.

Roller Hockey: Played on a smooth surface with a hard plastic puck. Players wear roller skates and the game shares similarities with both field hockey and ice hockey. Roller hockey is popular in many parts of the world, particularly in areas with limited access to ice rinks.

Origins and History:

The origins of hockey can be traced back centuries, with evidence of games resembling hockey being played in ancient Egypt, Greece, and Rome. The modern forms of hockey we know today started to develop in the 18th and 19th centuries in Europe, particularly in England.

The first Hockey Association was formed in the UK in 1876 and drew up the first formal set of rules. The original association survived for just six years but, in 1886, it was revived by nine founding member clubs.

Hockey and the Olympics

The inaugural Olympic Hockey Competition for men was held in London in 1908 with England, Ireland, Scotland and Wales competing separately. With the addition of Germany and France, the competition ran with six teams.

After having made its first appearance at the London Games, hockey was subsequently dropped from the 1912 Stockholm Games after host nations were granted control over 'optional sports'. It reappeared in 1920 in Antwerp after pressure from Belgian hockey advocates before being omitted again in Paris in 1924.

The formation of the International Hockey Federation in 1924 was not soon enough for the Paris Olympics but it did grant hockey re-entry in Amsterdam in 1928. Hockey has been on the programme ever since, with women's hockey included for the first time in Moscow in 1980.

Hockey and the FIH

Motivated by hockey's omission from the 1924 Paris Games, the Fédération Internationale de Hockey sur Gazon (FIH) was founded by Paul Léautey. M. Léautey, who would later become the

first president of the FIH, called together seven National Federations to form the sport's international governing body.

These founding members, which represented both men's and women's hockey in their countries, were Austria, Belgium, Czechoslovakia, France, Hungary, Spain and Switzerland. Popularised in the late 19th century, the women's game developed quickly in many countries. In 1927, the International Federation of Women's Hockey Associations (IFWHA) was formed. After celebrating their respective Golden Jubilees - the FIH in 1974 and the IFWHA in 1980 - the two organisations came together in 1982 to form the current FIH.

By 1964, there were already 50 countries affiliated with the FIH, as well as three Continental Associations - Africa, Pan America and Asia - and in 1974, there were 71 members. Today, the International Hockey Federation consists of five Continental Associations, 137 National Associations and is still growing.

Key Equipment:

Stick: The stick is the primary tool for players to control the ball/puck. The shape and curvature of the stick vary depending on the type of hockey.

Ball/Puck: Field hockey uses a small, hard ball, while ice hockey uses a vulcanized rubber puck and roller hockey uses a hard plastic puck.

Protective Gear: Players wear protective gear specific to the type of hockey. In ice hockey, extensive padding and helmets are essential due to the fast-paced nature and physical contact of the sport.

Rule and regulations

Hockey rules and regulations can vary slightly depending on the type of hockey (field, ice, roller), but here's a breakdown of the key points for each:

General Rules (Apply to all types of Hockey):

Objective: Score more goals than the opposing team by hitting the ball/puck with your stick and directing it into their net.

Playing Field: Field hockey is played on grass or artificial turf, ice hockey on an ice rink, and roller hockey on a smooth, solid surface.

Equipment: Players use sticks to control the ball/puck. The specific type of stick varies by hockey type. Players cannot use their hands on the ball/puck (except goalkeepers in a designated area).

Number of Players: Field hockey typically has 11 players per team on the field at a time, while ice and roller hockey have 6 players each on the ice/court at a time.

Fouls and Penalties: Various penalties are awarded for infractions like hitting other players with the stick, obstruction, or dangerous play. Penalties can range from a free hit/shot for the opposing team to sending a player off the field for a temporary period.

The Ball: A small, hard ball made of cork or plastic.

Foot Rules: Players cannot intentionally stop or control the ball with their feet or legs.

Dangerous Play: Hitting the ball dangerously high towards the opposition is a foul.

Corner Penalty: Awarded when a defending player commits a foul inside their own 25-yard circle.

Rule and regulations

The basic field hockey rules

1-Hockey players can only hit the ball with the flat side of their stick.

2-Hockey players (other than the goalkeeper) are not allowed to use their feet, or any other parts of the body, to control the ball at any time.

3-A goal can only be scored either from a field goal, a penalty corner, or from a penalty stroke. A field goal is a goal scored from open play, and can only be scored from inside the 'striking circle', in front of the opponent's goal. If the hockey ball is hit from outside the circle and goes into the goal, it does not count as a goal.

4-Hockey players may not trip, push, charge, interfere with, or physically handle an opponent in any way. Hockey is a non-contact sport and all fouls result in a free hit or a 'penalty corner' for the non-offending team depending on where the infringement took place and the severity of the foul.

Types of foul in field hockey

A number of different types of foul may be punished in a game of hockey. Some of the basic ones to watch out for include.

Obstruction. This is awarded against a hockey player who uses their body or stick to prevent an opponent from reaching the ball.

Third-party obstruction. This is awarded when a hockey player positions themselves between the ball and an opponent, allowing a team-mate an unobstructed play on the ball.

Advancing. This is awarded against a player who shoves, pushes, or advances the ball in any way, using any part of their body.

Backsticks. This is awarded against a player who strikes the ball with the rounded back of the hockey stick.

Hockey stick interference. This is awarded against a player who uses their stick to hit an opponent's stick, either intentionally or unintentionally.

Undercutting. This is awarded against a player who lifts the ball in a dangerous manner.

Sticks. This is awarded against a player who raises their stick dangerously near another player.

Types of punishment in field hockey

Fouls in a hockey match can be punished in three main ways. These are as follows:

Free hit. This is a free play awarded on any offenses that occurs outside of the scoring circle. It usually takes place at the location of the violation. All opposing players must stand at least 5 yards (4.6m) from where the hit is to be taken.

Penalty corner. This is awarded to the attacking team when the defense either commits a foul inside the striking circle or intentionally hits the ball out-of-bounds over the end line. A penalty corner is taken by an attacking player at a spot on the end-line 10 yards (9.2m) away from the nearest goal post. All other attackers must stand outside the striking circle, while five defenders, including the goalkeeper, stand behind the end line until contact is made with the ball. Once the

ball has been put in play, all players can rush into the circle to either defend or shoot the ball at the goal.

Penalty stroke. This is awarded to the attacking side when an offense is committed by the defending side which is deemed to have prevented an almost certain goal. A penalty is taken 7 yards (6.4m) from goal, with the player having only the goalkeeper to beat.

Field hockey umpires

There are two umpires on the hockey field, who are usually responsible for each half of the pitch. A player who breaches the rules, either by rough or dangerous play, misconduct, or an intentional offenses, can be shown a card — either green, yellow or red.

Green. This is an official warning given to the hockey player to not break the rules.

Yellow. This results in a hockey player being sent off the pitch for 5 minutes, following an offense.

Red. A red card results in an early shower and is given for more serious offense.

b- Organizations of Hockey , Hockey Field ,arena preparation , repreship of Hockey game

Fédération Internationale de Hockey (FIH): The International Hockey Federation, commonly known by the acronym FIH, is the international governing body of field hockey and indoor field hockey. It is responsible for the sport's major international tournaments, including the Hockey World Cup, FIH Hockey World League, and FIH Hockey Pro League. The FIH is headquartered in Lausanne, Switzerland, and has 140 member nations as of 2023.

Hockey field

A hockey field is the playing surface for the sport of field hockey. It's a rectangular field made of either natural grass or, more commonly today, artificial turf.

Here are the key dimensions of a field hockey field as set by the International Hockey Federation (FIH):

Length: 91.4 meters (100 yards)

Width: 55.0 meters (60 yards)

The field is also marked with various lines and zones that dictate gameplay. Here's a breakdown of the important markings:

Goal Lines: The shorter sides of the field where the goals are located.

Sidelines: The longer sides of the field.

Backline: The line behind each goal.

23-metre Line (or 25-yard line): A line drawn 23 meters (25 yards) from each backline. This line is significant for some penalty situations.

Center Line: A line dividing the field in half.

Striking Circle (or D): A semi-circular area measuring 14.63 meters (16 yards) from the backline within which attackers are allowed more freedom to use their bodies to take shots on goal.

Penalty Spot: A spot located 6.4 meters (7 yards) directly in front of the center of each goal where penalty strokes (similar to penalty shots in soccer) are taken.

Arena preparation

Arena preparation for hockey involves a multi-step process to ensure the ice surface is perfect for the game and the overall environment is ready for players, fans, and the broadcast. Here's a breakdown of the key stages:

Ice Making:

Base Preparation: The concrete floor of the arena is cleaned and prepped. A network of pipes underneath the concrete circulates a chilled coolant, typically a glycol solution.

Water Addition: Hot water is initially added to create a bond between the concrete and the first ice layer.

Ice Building: Subsequent layers of water are sprayed and frozen gradually, building up the ice thickness to around 2 inches (5 centimeters). This process can take several days.

Resurfacing: During games, a resurfacer machine shaves off the top layer of ice, smoothing imperfections and collecting ice chips to create a clean, consistent playing surface.

Markings and Painting:

Once the ice reaches the desired thickness, it's painted white to create a clean base for the game markings.

Specific lines and markings are then painted onto the ice according to official hockey regulations. These include the blue lines separating the zones, the red goal lines, the center line, faceoff circles, and the crease around the goal.

Goal installation: Hockey nets are securely mounted in each goal crease.

Plexiglass and netting checks: The plexiglass boards surrounding the rink and the netting above them are inspected and ensured to be secure.

Player benches and penalty boxes: These areas are prepped and ensured to be ready for use.

Temperature control: The arena temperature is maintained at a specific level (around 14°F or -10°C) to keep the ice surface optimal. **Lighting:** The ice surface is illuminated with bright lights for optimal play and broadcast quality.

Locker rooms: These are prepared for the teams with equipment, towels, and other necessities.

Sound system and scoreboards: These are tested and ensured to be operational for announcements, music, and displaying the game score.

Timeframe: The entire arena preparation process, including ice making, can take several days to a week depending on the specific arena and its existing ice infrastructure.

Event conversion: Arenas that host multiple sports or events might need to adjust the ice surface and markings accordingly. For example, a basketball court might be laid over the ice for a basketball game.

Hockey official

Hockey officials are the individuals responsible for enforcing the rules, maintaining order, and ensuring fair play during a hockey game. There are three main types of officials in hockey:

Referees:

There is typically one head referee and one or two linesmen on the ice for each game. Referees oversee the entire game, blow the whistle to stop play for infractions or goals, and call penalties for violations of the rules.

They ensure player safety by monitoring dangerous play and potential fights.

Referees communicate with players, coaches, and other officials throughout the game.

Linesmen:

Linesmen primarily focus on the areas around the blue lines (center ice and the goal lines) and the neutral zone.

They are responsible for calling offside violations, icing infractions, and faceoff procedures.

Linesmen also monitor play along the boards and behind the net for infractions.

They communicate with the referees and signal calls visually using hand gestures.

Video Review Officials (Optional):

Not all leagues utilize video review, but in leagues that do, video review officials are stationed in a separate room with access to video replays.

Referees can call for a video review to confirm or overturn calls on the ice, such as close calls on goals, offside violations, or checking penalties.

Video review officials analyze the replay and communicate their decision to the referees on the ice.

c- coaching of all components of hockey

Coaching of all components of hockey involves training players in various skills and tactics to improve their overall performance on the ice. This includes teaching players how to skate, pass, shoot, and defend effectively, as well as developing their understanding of team strategies and positioning.

Some key components of coaching hockey include:

1. Skating: Improving players' speed, agility, and balance on the ice through drills and exercises.

2. Passing: Teaching players how to make accurate and efficient passes to teammates, as well as how to receive and control passes.

3. Shooting: Developing players' shooting technique and accuracy, including wrist shots, slap shots, and backhand shots.

4. Defense: Training players in proper positioning, defensive techniques, and communication with teammates to prevent goals and transition to offense.

5. Team tactics: Teaching players how to work together as a cohesive unit, including strategies for offensive and defensive play, power plays, penalty kills, and face-offs.

6. Physical conditioning: Implementing fitness and strength training programs to improve players' endurance, speed, and physicality on the ice.

7. Mental training: Helping players develop mental toughness, focus, and confidence to perform under pressure and overcome challenges.

Overall, coaching all components of hockey requires a well-rounded approach that addresses skill development, tactical understanding, physical fitness, and mental preparation to help players reach their full potential on the ice.

1v- Practical related to preparation of organizing, playing , coaching, managing and selected games hockey

Preparation for organizing, playing, coaching, and managing hockey involves a combination of practical steps to ensure success both on and off the ice. Here are some practical suggestions related to each aspect:

1. Organizing:

- Establish a clear schedule for practices, games, and team events.
- Arrange for ice time and facilities for practices and games.
- Coordinate with league officials, referees, and other teams for game scheduling.
- Secure necessary equipment, jerseys, and supplies for the team.
- Communicate effectively with players, parents, and team staff about important information and updates.
- Plan team-building activities and community involvement events to foster a positive team culture.
- Create a budget and fundraising plan to cover costs and expenses related to the team.

2. Playing:

- Ensure all players have the necessary equipment, including skates, sticks, helmets, and protective gear.
- Implement a warm-up routine prior to practices and games to prevent injuries.
- Develop and implement strategies for offensive and defensive play based on the team's strengths and opponents' weaknesses.
- Encourage teamwork, communication, and sportsmanship on and off the ice.
- Provide feedback and constructive criticism to players to help them improve their skills and performance.
- Monitor player health and well-being, including proper hydration, rest, and recovery.

3. Coaching:

- Develop practice plans that focus on skill development, strategy implementation, and team bonding.
- Provide individualized coaching and feedback to players to help them reach their full potential.

- Study opponents and devise game plans to counter their strengths and exploit their weaknesses.
- Communicate effectively with players, assistant coaches, and team staff to ensure a cohesive approach.
- Attend coaching clinics, seminars, and workshops to stay updated on the latest trends and techniques in hockey coaching.
- Build relationships with players based on trust, respect, and open communication.

4. Managing:

- Keep detailed records of player information, game results, and team finances.
- Coordinate travel arrangements for away games and tournaments.
- Handle administrative tasks such as registration, insurance, and league compliance.
- Communicate with parents and guardians regarding team schedules, expectations, and any issues that may arise.
- Work closely with team officials and league representatives to address any concerns or disputes.
- Foster a positive and inclusive team environment that promotes growth and success for all players.

By following these practical steps related to preparation for organizing, playing, coaching, and managing hockey, you can help create a successful and harmonious hockey program for players, coaches, and staff alike.
