

IT Project Management

- * software project management is type of project management that focuses specially creating or updating software products.
- * Project management involves coordinating people, vendors, and resources.
- * Project management requires excellent communication skills, a strong will to protect project scope, and leaderships skills.
- * Project Manager: The person who lead the project team to achieve project objectives.
- * Project: A temporary endeavor to create a unique product, service or result.
- * Temporary indicates definite beginning and ending.
- * Temporary does n't mean short duration.

Project Constraints

* A constraint is anything that restrict project manager's options.

* The constraints are requirements, confines, or prison walls.

constraints include:

- Resource constraints, such as a team member assigned to too many concurrent tasks.
- Tight deadlines
- Budgetary limitations
- Govt regulations
- Limitation of software.
- Scope limitation
- Hardware restriction
- anything that restrict your options.
