

LECTURE 12

Zeeshan Mahmood Butt
Assistant Professor of Statistics
Govt. College, Gujranwala

Research Report

- A research report is a typed document.
- It deals with the research that we undertake on the topic as well as our interpretation of this available information.
- It is the last & the most crucial step in the research process as it is through the report that the findings of the study and their implications are communicated to the readers.

As Burns writes,

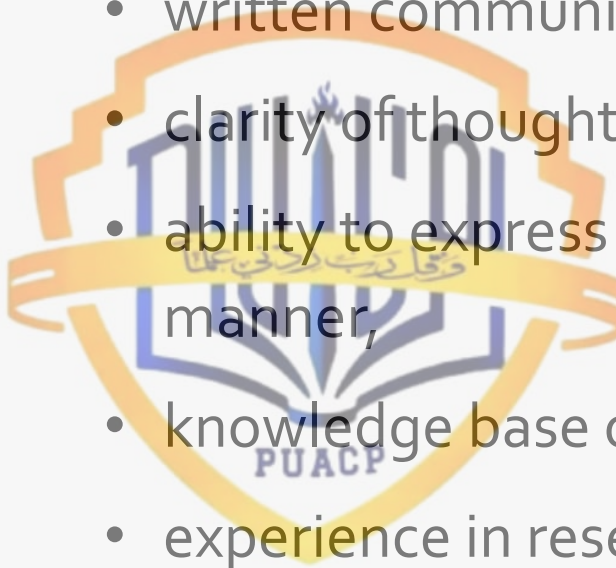

- 'extremely valuable and interesting practical work may be spoiled at the last minute by a student who is not able to communicate the results easily' (1997: 229).

Important points for writing a Research Report

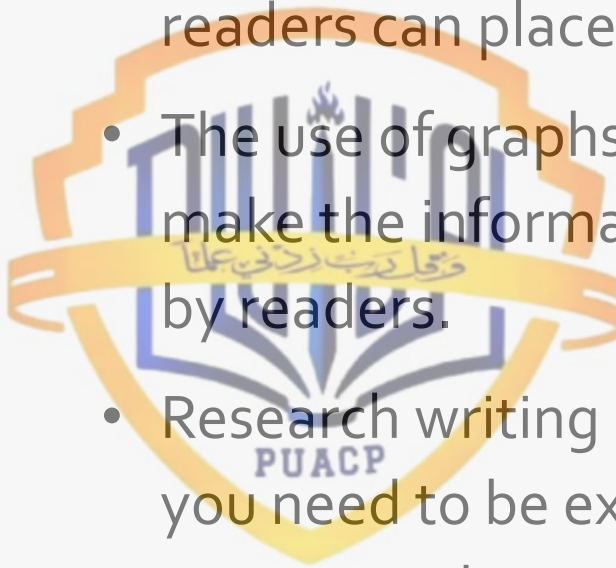

The quality of the report depends upon such things as:

- understanding of research methodology
- written communication skills
- clarity of thought,
- ability to express thoughts in a logical and sequential manner,
- knowledge base of the subject area
- experience in research writing
- use of statistical procedures will reinforce the validity of your conclusions

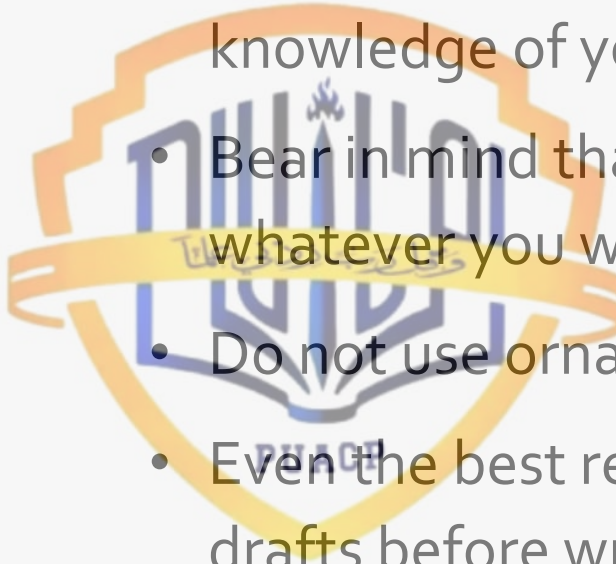

Important points for writing a Research Report

- The use of statistical procedures will reinforce the validity of conclusions & arguments and indicate the strength of an association so readers can place confidence in your findings.
- The use of graphs to present the findings make the information more easily understood by readers.
- Research writing is controlled in the sense that you need to be extremely careful about what you write, the words you choose, the way ideas are expressed, and the validity and verifiability of the bases for the conclusions you draw.

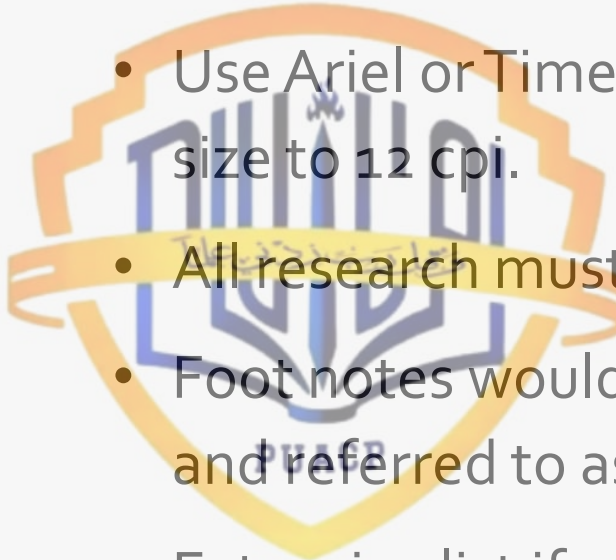

Important points for writing a Research Report

- Research writing must be absolutely accurate, clear, free of ambiguity, logical and concise.
- It should not be based upon assumptions about knowledge of your readers about the study.
- Bear in mind that you must be able to defend whatever you write should anyone challenge it.
- Do not use ornamental and superficial language.
- Even the best researchers make a number of drafts before writing up their final one, so be prepared to undertake this task.

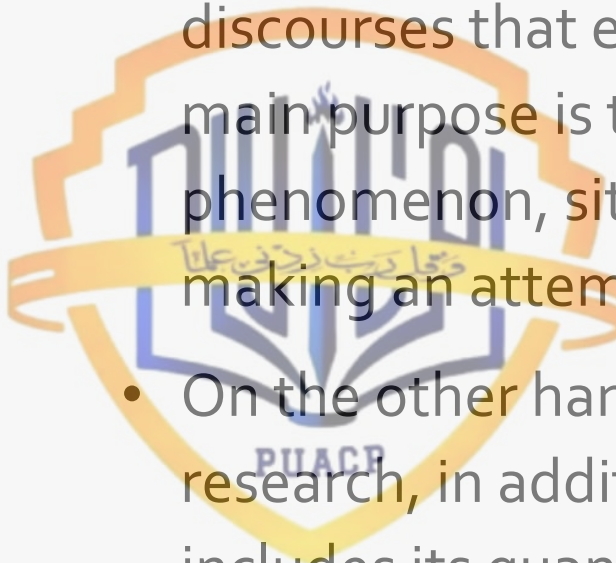

Important points for writing a Research Report

- In research report appropriate margins must be used.
- The text should be justified.
- Use Ariel or Times New Roman font and keep the size to 12 cpi.
- All research must be doubled space.
- Foot notes would be included in the body of the text and referred to as "Citations".
- Extensive list if any, should be included in and annexure rather than the actual report.
- Appropriate rules of grammar, sentence, structure, transitions between paragraphs must be strictly followed.

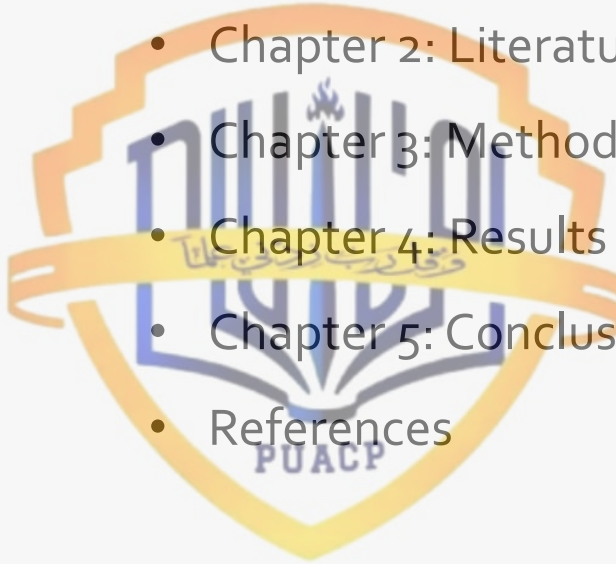

Qualitative & quantitative research reports

- in qualitative research the findings are mostly communicated in descriptive or narrative format written around the major themes, events or discourses that emerge from your findings. The main purpose is to describe the variation in a phenomenon, situation, event or episode without making an attempt to quantify the variation.
- On the other hand, the writing in quantitative research, in addition to being descriptive, also includes its quantification. Depending upon the purpose of the study, statistical measures and tests can also become a part of the research writing to support the findings.

Format of writing research report

- Title
- Abstract
- Chapter 1: Introduction
- Chapter 2: Literature Review
- Chapter 3: Methodology
- Chapter 4: Results
- Chapter 5: Conclusion and Recommendation
- References
