Types of Survey

Types of Surveys

Surveys are classified in various ways which depends on subject matter of the survey. Few of them are as follow

Attitudinal Survey

Social Activities Survey

Demographic Survey

General Survey

Specific Survey

Sample Survey

Regular & Ad Hoc Survey

Opinion Survey

Interpretative Survey

Attitudinal Survey

- This is a kind of survey used in business and marketing research to know the opinions and attitude.
- This kind of survey provide essential and conclusive data for decision making.

Social Activities Surveys

- It is mostly used in social science where we are concerned with the information about the public activities
 - e.g. their spending, male female income variation etc.
- This survey focus on the respondents that how they behave, how they spent their free time.

Demographic Survey

- Population census in Pakistan conducted every ten years is the kind of demographic survey.
- This provide us data about age, sex, marital status, fertility, mortality etc.

General Surveys

- It is collected for general information about a sample taken from large size population.
 - e.g. in population census, information about incomes of different families.

Specific Surveys

- Specific surveys are conducted to study specific problems to verify the information, which had been collected in the past.
- The usefulness of this survey is restricted to the scope of study.
- Business firms use specific surveys for making decision about information and solving problems encountered by them.

Regular & Ad Hoc Surveys

- Government agencies, economists and planners conduct such surveys to monitor and review the regional and national economy.
- This helps government institutions to update their records to study and analyze the trends and changes that might occur.
- This survey is only conducted when required.

Sample Survey

- Sample surveys are used in Pakistan and even worldwide.
- It covers the representative characteristics of the population.

Opinion Survey

- Opinion survey always has the clause of expressing respondent's personal point of view.
- He is given an opportunity to report his judgment on a particular issue.
- Researchers normally confuses between facts and opinions while interpreting data for decision making.

Interpretative survey

- In this survey respondent acts as a interpreter as well as a reporter. For example the respondent answers the question “why do you smoke?”
- This survey technique is very useful to know the interpretation of different persons about various kind of situations.
- Here interpretation vary on the base of individual's education, age, gender, background and experience.
- Actual difficulty is to make appropriate questionnaire which may provide interpretation of less educated respondents.

Thanks
