

COMPUTER SOFTWARE AND ITS TYPES

Name: Amina Munir, Hira Mustafa, Warda Tanweer, Ramsha Naeem,
Fatima Bibi, Laiba Hassan, Laiba Arif, Faryal Shabir

Roll no: 20018, 20001, 20003, 20034, 20025, 20029, 20006, 20024

Subject: COMP-111

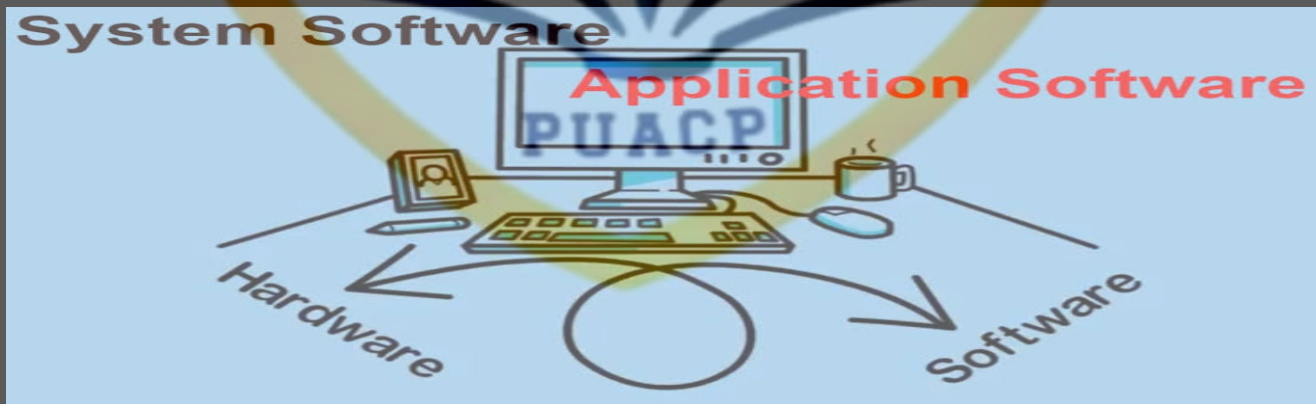

Class: BS English(1st semester)

Submitted to: Ma'am Majida Khanum

Dated: 15th /March /2021

SOFTWARE:

- **Software** is a set of instructions that tell a computer what to do. A computer works according to the given instructions in the software.
- It is logical part of computer.
- It cannot be touched.
- It is stored on Hard disk.
- On requirement software can be copied from the disk into main memory.

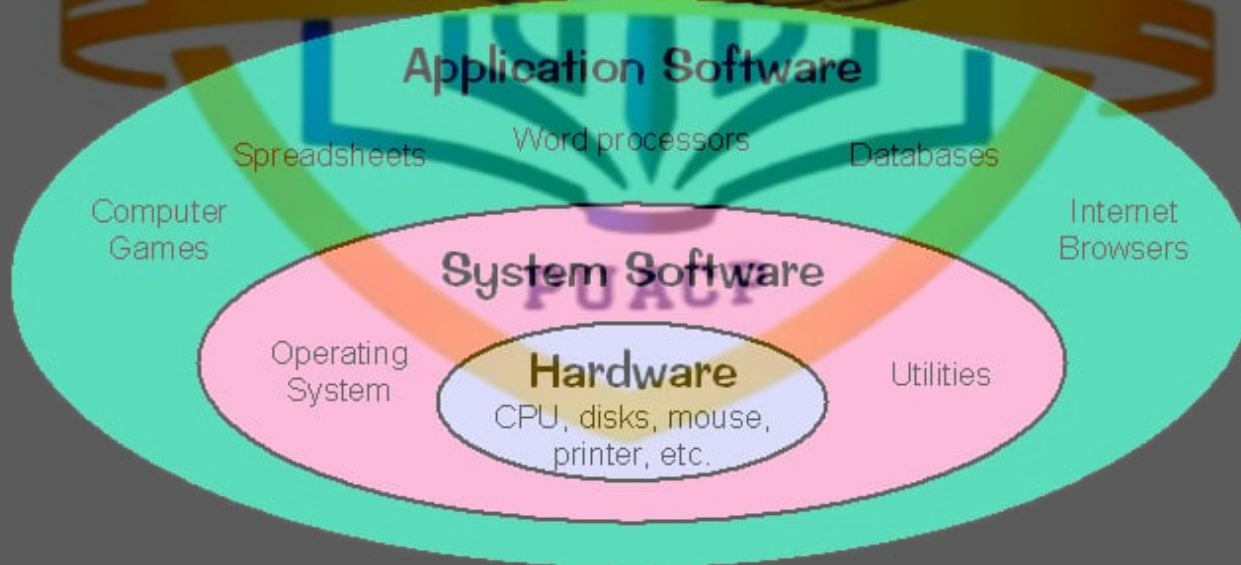

TYPES OF SOFTWARE

- There are two main types of software:

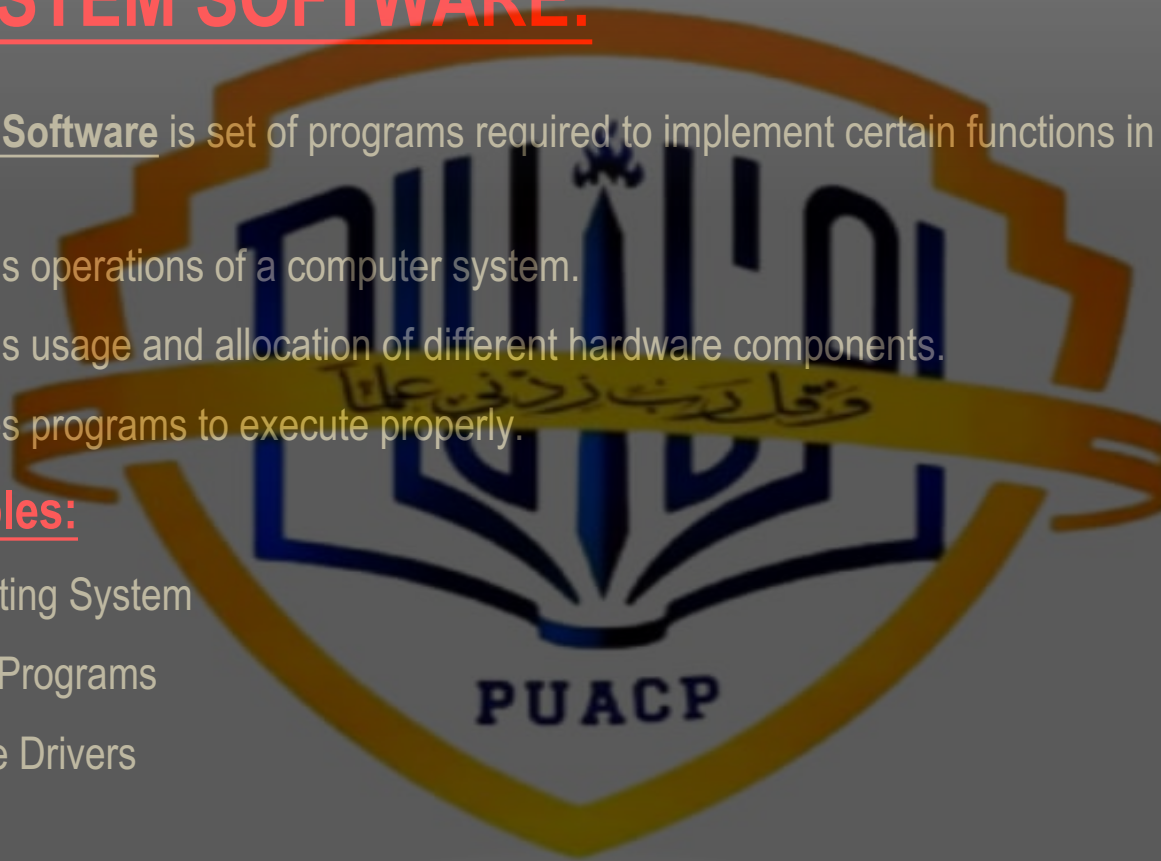

I. System Software

II. Application Software

I. SYSTEM SOFTWARE:

- System Software is set of programs required to implement certain functions in a computer system.
- It controls operations of a computer system.
- It controls usage and allocation of different hardware components.
- It enables programs to execute properly.
- Examples:
 - I. Operating System
 - II. Utility Programs
 - III. Device Drivers

II. APPLICATION SOFTWARE:

- Application Software is a program needed to perform various applications on the computer by user.
- It helps computer user to solve specific problems.
- It uses the operating system to function.

- Examples (categories):

- I. Customized Software
- II. Package Software

Difference Between

System software and Application Software

Application
software

Vs.

System
software

DIFFERENCE B/W SYSTEM AND APPLICATION SOFTWARE

System Software	Application Software
General-purpose software	Specific purpose software
Manage computer resources	Solve particular problems
Executes all time in computer	Executes as when required
Essential for computer to work	Non- essential for computer to work
It interacts with hardware directly	It interacts with hardware indirectly through system software
Number of system software is less than application software	Number of application software is much more than system software

SYSTEM SOFTWARE

I. OPERATING SYSTEM

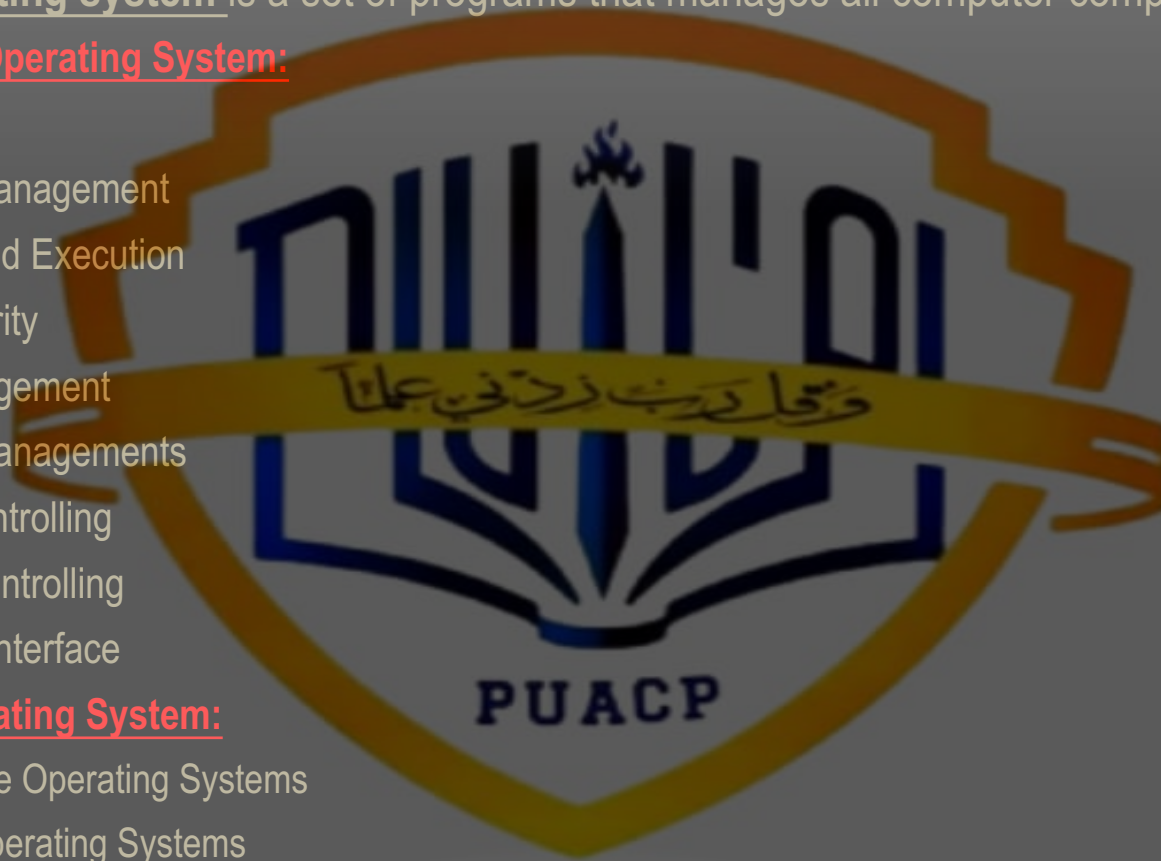

- An operating system is a set of programs that manages all computer components.

Functions of Operating System:

- Booting
- Memory Management
- Loading and Execution
- Data Security
- Disk Management
- Process Managements
- Device Controlling
- Printing Controlling
- Providing Interface

Types of Operating System:

- Stand-Alone Operating Systems
- Network Operating Systems
- Embedded Operating Systems

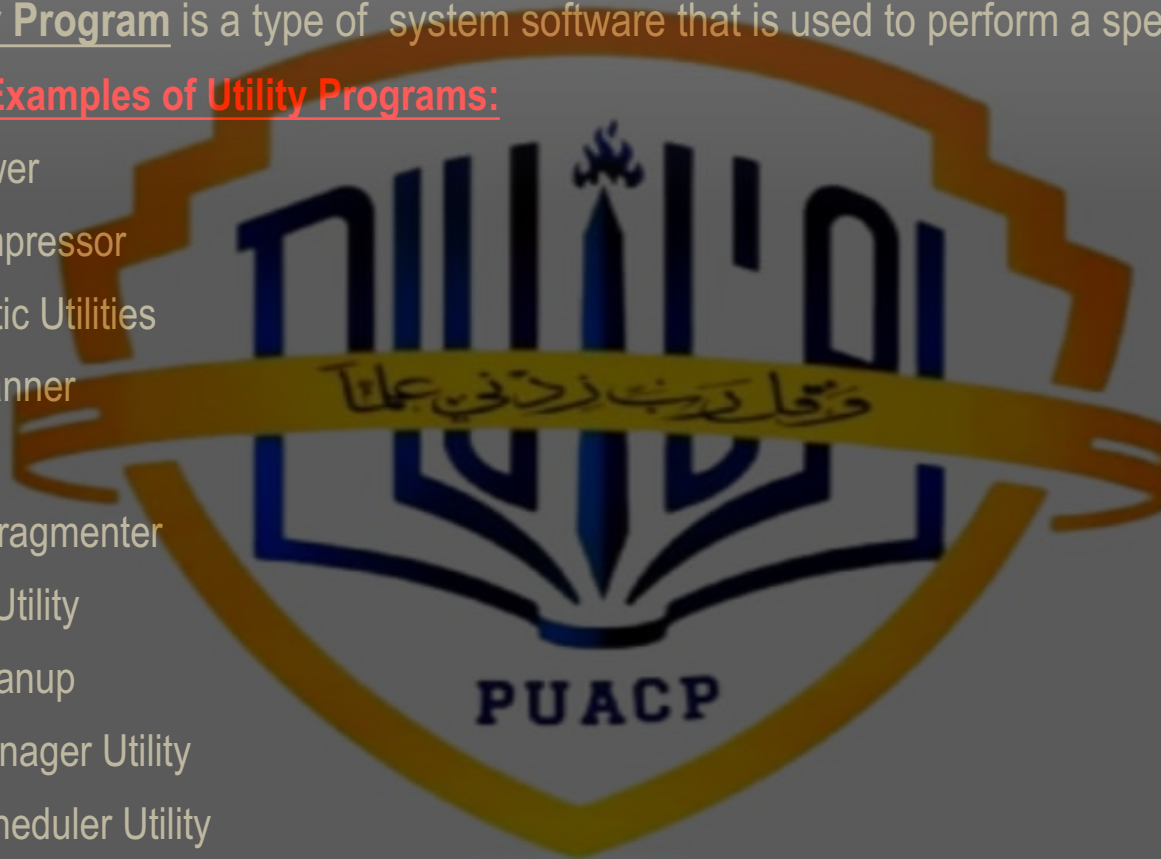

II. UTILITY PROGRAMS

- A Utility Program is a type of system software that is used to perform a specific task.

Usage and Examples of Utility Programs:

- File Viewer
- File Compressor
- Diagnostic Utilities
- Disk Scanner
- Antivirus
- Disk Defragmenter
- Backup Utility
- Disk Cleanup
- Task Manager Utility
- Task Scheduler Utility
- Personal Firewall
- Spyware Removal

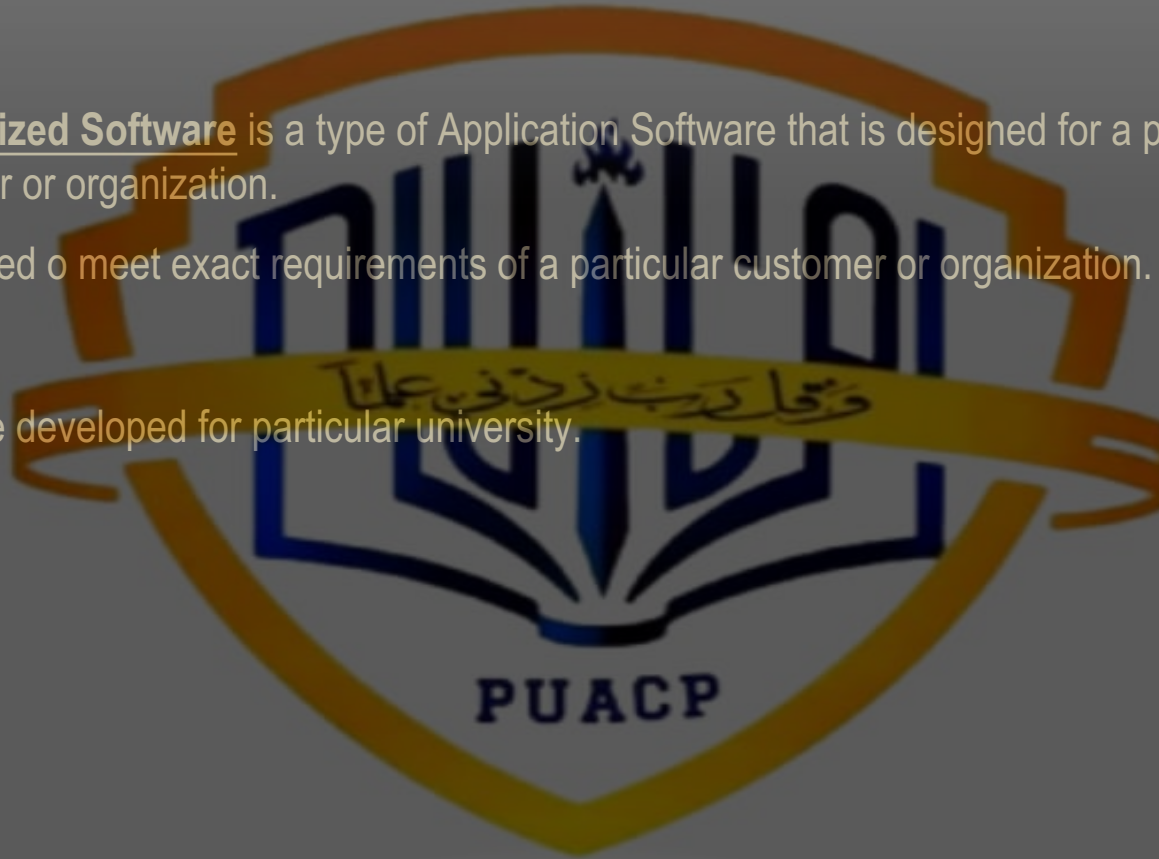

APPLICATION SOFTWARE

I. CUSTOMIZED SOFTWARE

- Customized Software is a type of Application Software that is designed for a particular customer or organization.
- Developed to meet exact requirements of a particular customer or organization.

Example:

- Software developed for particular university.

II. PACKAGE SOFTWARE

- Package Software is a type of application software that is developed for the sale to the general public.
- Also known as off- the- shelf software.

Example:

- Word Processing: used to produce letters, applications, and other documents. i.e. MS Word
- Spreadsheets: used for calculations. i.e. MS Excel
- Databases: organized collection of related data that is stored in an effective and compact manner. i.e. MS Access, Oracle
- Graphics: used to produce advertisement posters. i.e. CorelDraw, Photoshop
- Communication: used to communicate with different people using internet.
i.e. MSN Messenger, Outlook Express, Internet Explorer
