SAVING A DOCUMENT

Steps on how to save a document

1. Move the mouse pointer to the 'office button'
 2. Click the Microsoft Office button
 3. Move the mouse pointer to 'Save As' and click it
 4. A 'Save As' dialog will appear showing the folder 'Save In' dialog will appear showing the folder of your choice.
 5. Move and click on the 'Save As' button, after you have finish giving the file a name. what did you observe after saving your work with a file name.
- The title bar will change from document 1 – Microsoft Word to the filename that you use to save that file.

1. Saving a file for the first time

When you save a new file (a document, spreadsheet etc.) for the first time, **SAVE** and **SAVE AS** do exactly the same thing.

So choose either option.

The keyboard shortcut to save a file is **Ctrl + S**.

2. Saving a file for the second time onwards

If you make changes to a file that has already been saved, then **SAVE** and **SAVE AS** do different things.

- **SAVE** will save the updates you have made to the same file name.
- **SAVE AS** let's you save a second copy of the file, so you'll then have two files – the original file (old) and the latest file (new).

Most times, **SAVE** is the easiest option because then you only have one file to worry about.

You want fast ways to move in your longer Word documents:

- Go to the **end** of a document: **[Ctrl]+[End]**
- Go to the **beginning** of a document: **[Ctrl]+[Home]**
- Go to the **bottom** of a screen: **[Ctrl]+[Page Down]**
- Go to the **top** of a screen: **[Ctrl]+[Page Up]**

MS Word Edit Menu

The **Edit** menu in MS Word contains various options that can help you make changes to your document quickly and easily. Here's a rundown of some of the most commonly used options in the Edit menu:

1. **Cut, Copy, and Paste:** These options allow you to move and duplicate text within your document or across different documents.
2. **Undo and Redo:** These options allow you to undo or redo the most recent changes to your document. It can be helpful if you make a mistake or want to revert to a previous version of your document.
3. **Find and Replace:** These options allow you to search for specific text or formatting within your document and replace it with something else.
4. **Select All:** This option allows you to select all the text in your document simultaneously. It can be helpful to apply formatting or changes to your entire document.

Borders and shading

Borders and shading are used in Word Documents when we want some text/paragraph to grab the attention of the viewers, making it the First Impression. In **MS Word** we can apply

the *Borders* and *Shading* to the written text, paragraph, etc. to make them look good and appealing like they pop out of the page.

Applying Borders

The **border** as the name suggests provides an outer/inner lining on the selected text/paragraph. A Border is a good alternative to the Fonts Styles such as *Bold*, *Italics*, and *Underline* and grabs much attention quickly without hardcore techniques.

In *MS Word* there are multiple types of borders which are as follows:

- **Bottom Border**– Border at the bottom of the Paragraph.
- **Top Border**– Border at the top of the Paragraph.
- **Left Border**– Border on the left side of the Paragraph.
- **Right Border**– Border on the right side of the Paragraph.
- **No Border**– Removes all the borders.
- **All Borders**– Border on all sides of the Paragraph.
- **Outside Borders**– Border outside the Paragraph.
- **Inside Borders**– Border inside the Paragraph.
- **Inside Horizontal Border**– Horizontal borders on both sides inside the Paragraph.
- **Inside Vertical Border**– Vertical borders on both sides inside the Paragraph.

Steps to Apply:

Step 1: Select the text/Paragraph to apply Border.

Step 2: Now, go to the **Borders** tab in the **Paragraph** menu under the **Home** bar.

Step 3: Select the border of your choice.

Applying Shades

Another way of grabbing the attention of the viewers more likely is by using the **Shading** feature in the Word Document. It is similar to highlighting the text/Paragraph. In **MS Word** there are multiple colors available in the **Shading** tab, which you can apply to your text or paragraph like: *red*, *blue*, *black*, etc.

Steps to Apply:

Step 1: Select the text to apply the Shading.

Step 2: Now, go to the **Shading** tab in the **Paragraph** menu under the **Home** bar.

Step 3: Select the Shading Color of your choice.

However, we can apply both at the same time (Border and Shading), thus making our paragraph more appealing.
