

Title: Impact of Social Media on Student Academic Performance

Abstract: This study examines the relationship between social media usage and academic performance among college students. Using a survey of 300 participants, the findings indicate a negative correlation between excessive social media use and GPA. Recommendations include time management workshops and awareness campaigns.

Table of Contents:

1. Introduction
2. Literature Review
3. Methodology
4. Results
5. Discussion
6. Conclusion
7. References
8. Appendices

Introduction:

- **Background:** The rise of social media has revolutionized communication but also raised concerns about its impact on productivity and education.
- **Objective:** To analyze how social media usage influences the academic performance of students.

Methodology:

- **Design:** Quantitative study using a cross-sectional survey.
- **Data Collection:** A structured questionnaire distributed online.
- **Sample Size:** 300 undergraduate students.

Results:

- 70% of participants reported spending more than 3 hours daily on social media.
- A negative correlation ($r=-0.45$) was found between social media usage and GPA.

Discussion:

- Findings align with previous studies highlighting time mismanagement as a key factor.
- Implications suggest the need for awareness programs about balancing academic and social activities.

Conclusion:

Social media significantly impacts student performance, warranting interventions like time management training.
