

## **CHAPTER TWO**

### **1. THEORY OF COMMUNICATION**

Communication theory was proposed by S. F. Scudder in the year 1980. It states that all living beings existing on the planet communicate although the way of communication is different. Plants communicate their need to be taken care of and watered immediately through visible changes in the colour of the leaves, and the falling of leaves and flowers. Animals communicate by sounds, several movements to indicate that they are hungry or unwell or need medical attention.

A mother would never understand that her child is hungry unless and until the child cries. Crying is again a form through which the child communicates that he is hungry and needs food. The same applies when he is injured, where he uses crying again as a tool to communicate his pain and need of urgent medical attention.

Thus the universal law of communication theory says that all living beings whether they are plants, animals, human beings communicate through sound, speech, visible changes, body movements, gestures or in the best possible way to make the others aware of their thoughts, feelings, problems, happiness or any other information.

If a child scores less marks in examinations, parents would not speak to the child for some time - again an effort to communicate that the parents are angry over the child's performance and he needs to buck up for his further examinations. Try to irritate a stray dog, he will surely bark on you - again an animal's way to communicate that he is angry and should not be irritated further.

Like human beings, animals also communicate among themselves through gestures and body movements. Monkeys always carry their babies with them wherever they go, again a way through which the mother tries to communicate that their babies are safe and the mother is there to take good care of them. During the mating season of animals, communication through gestures plays a very important role in bringing them close, the same way a peacock dances to attract its partner.

Another model of communication says that communication is simply the process of transferring information from the sender to the recipient where the recipient decodes the information and acts accordingly. Large number of people also support this model of communication.

### **COMMUNICATION THEORY FRAMEWORK**

Let us examine communication and communication theory through the following viewpoints:

**Mechanistic** - The mechanistic view point says that communication is simply the transmission of information from the first party to the second party. The first party being the sender and the second party being the receiver.

### **Psychological**

According to the psychological view point, communication is simply not the flow of information from the sender to the receiver but actually the thoughts, feelings of the sender which he tries to share with the recipients. It also includes the reactions, feelings of the receiver after he decodes the information.

### **Social**

The social view point considers communication as a result of interaction between the sender and the receiver. It simply says that communication is directly dependent on the content of the speech. “How one communicates” is the basis of the social view point.

### **Systemic**

The systemic view point says that communication is actually a new and a different message which is created when various individuals interpret it in their own way and then reinterpret it and draw their own conclusion.

### **Critical**

The critical view point says that communication is simply a way with the help of which an individual expresses his power and authority among other individuals.

To summarize the communication theory proposes that to survive, every living entity, needs to communicate with others and also among themselves. Communication is a dire need of survival.

## **2. THE COMMUNICATION CYCLE**

Communication is an essential part of everyday life. There are a number of communication methods available to us – from simple chats with colleagues, to presentations and speeches, to text messaging and videoconferencing – and the range is growing daily. However, the underlying structure of the communication cycle remains the same, no matter what medium is being used. This article describes the component parts of the communication cycle and the theory behind it.

At its most basic level, communication is an interactive process for sending and receiving messages (either verbally or non-verbally). Ideally, the message sent would be identical to the message received; however this is rarely the case because messages will involve thoughts, emotions, impressions, needs, wants, and/or facts. Effective communication obliges the message-sender to design their message and send it in such a way that is appropriate to their audience, reducing the disparity between the message sent and the message that is actually received. When people communicate, human nature dictates that they assume they are doing so effectively. If

anything goes wrong with the interpretation of the message, it is assumed that the responsibility for this rests with the recipient. This is because people tend to decide what they want to say and how they want to say it, without considering their audience properly. Effective communicators, however, will pay a great deal of attention to each stage of the communication cycle, so that their message is suitably tailored to its recipient.

## Elements of Communication Cycle

The communication cycle consists of five elements

### 1. Sender

The sender is the individual who wishes to communicate a message. To send effective messages, it is important to have:

- A knowledge of the audience for that particular message. Failure to understand the audience will result in delivering messages that can be misunderstood.
- A clear idea of the purpose of the message, i.e. what they wish the receiver to do with the information contained in the message.

### 2. Message

The message is the information the sender wishes the audience to receive and understand. The message is encoded by the sender, i.e. the sender chooses the words and medium that suit the message they wish to convey. Written, oral and nonverbal communications are all affected by individual communication styles such as the sender's tone, the way they present the message, what information is contained in the communication and what has been omitted.

### 3. Transmission and Noise

The transmission of the message is the actual process of sending it. This could be done via various verbal and written communication channels; for example email, letters, text, reports, face-to-face,

telephone and videoconferencing. It is important to transmit the message clearly and at an appropriate time, considering any distractions that could make communication difficult.

Noise is one such distraction. This is anything that could interfere with the transmission of the message. This can include physical noise such as buzzing on a telephone line or a mobile phone reception breaking up, to more personal noise such as an individual's accent, personal experience, feelings, culture, level of education, etc. which can all interfere with how the message is perceived.

#### **4. Receiver**

The receiver tries to interpret the message by decoding the words and symbols used. However, the receiver will also take into account their own previous experience, emotions, ideas and beliefs when trying to make sense of the message.

#### **5. Feedback**

The receiver feeds back their understanding of the message to the sender, to make sure that the message they received was the same message as the sender intended. This feedback can be a verbal or non-verbal response, for example saying yes or nodding the head.

### **Why is Communication so Important**

The purpose of communication is to convey a message effectively to others. This process involves both the sender of the message and the receiver. However, messages can often be misunderstood by one or more of the parties involved. It is vital to get communication right in the workplace, for example when a manager needs to inform his workforce of potential redundancies. Misunderstandings in the transmission of this message could lead to an unhappy and/or unproductive workforce.

A message is successful only when both the sender and the receiver understand to mean the same thing. If messages are transmitted successfully, thoughts and ideas are communicated effectively.

When transmission is unsuccessful, the thoughts and ideas conveyed do not necessarily reflect their true meaning, causing a breakdown in communications and relationships.

### **3. THE ROLE OF TEACHERS**

In a traditional classroom, a teacher speaks while students listen. This works great for some students but not so well for others:

- Students who already know the content get bored.
- Students who are behind can't follow.
- Students who are absent miss everything.

In a Modern Classroom, the teacher replaces lectures by recording short videos, based on research-supported practices. Now students can:

- Fast-forward through things they already know.
- Pause to take notes or ask questions.
- Rewind when they miss something.
- Learn in school and at home.
- Rewatch old videos in preparation for year-end assessments.

This all means that, during class, teachers their time giving each student the supports they need. You won't see a teacher standing up front, managing behavior. Instead, Modern Classroom teachers spend most of their time working with students alone or in small groups, while other students learn through videos or self-directed group work.

The teacher's role is to encourage, nurture, and challenge, while students lead their own learning. This means that the teacher spends class time working closely with students, providing each learner with the support they need.

### **3.1 TEACHER AS PERFORMERS**

Teacher as performer is a very powerful role and one we can savor. Research shows that a dynamic presentation of nonsense is valued more by most students than the most erudite and demanding series of facts, interspersed with poor presentation (Fox, 19 ). Research underscores that this is even more applicable with secondary than elementary students, with those who are knowledgeable more than those who are novices.

Many teachers resist this role. Although we know how much we valued learning experiences which were enjoyable and exciting, we inherently resist the notion that Sesame Street really teaches children, or that we might need to let our hair down and risk ourselves as a stand-up comedian who receives derision instead of laughs.

Why would teachers resist a role as performer?

- It is very demanding and is a high energy user
- Many teachers fear that they will lose the audience and be unable to regain either student decorum or student respect
- Many teachers are uncertain of themselves and are unwilling to risk disclosure
- Although great literature is a prime example of true education and entertainment going hand in hand, there is a deeply rooted belief that learning and pain somehow belong together, while learning and pleasure must somehow be frivolous - this particularly carries over into evaluation
- Some teachers believe that a direct linear presentation is fastest, and therefore the best and quickest way to effect learning
- Lack of security in one as own knowledge and ability to handle surprises
- Fear of appearing foolish and having "weak humanity" revealed
- Some teachers think of this as "Mickey Mouse" or for children, particularly prevalent perspective in secondary education

- Teachers are seldom required to learn entertainment skills, so there is a general lack of knowledge associated with the rigor and humanities connection this can bring into the classroom setting and the learning arena
- There is a current misconception that assuming different roles detracts from the presentation of a "real" person
- Good entertainment and performance takes a great deal of perfecting of skills and advance planning
- One must be good at student management to move in and out of performing

### **Teacher Behaviors Which Subtly Enhance Classroom Climate:**

- Use examples in lessons which stimulate student interest and are student focused
- Vary presentation to take attention spans into account
- Pace the lessons to maintain student interest and intersperse with active segments
- Use surprise and humor to heighten interest
- Minimize unintended distractions
- Highlight student input which takes the lesson forward
- Question students in a variety of ways and provide ways for them to share thoughts - with partners, on a personal response sheet, on the chalk board, in group
- Take students back and forth from familiar to unknown
- Use music, art, drama, activity through lessons to increase involvement, excitement

### **Dynamic ways to enhance the role of teacher / performer:**

|                         |                          |                           |
|-------------------------|--------------------------|---------------------------|
| Singing                 | Role playing             | Poetry                    |
| Puppet shows            | Chalk board contest      | Mnemonic games            |
| Word webbing            | Excerpts by authors      | Team efforts              |
| Learning centers        | Games-learning, etc.     | Physical punctuation      |
| Theater game            | Poetry                   | Art expression of concept |
| Dramatic interpretation | Make a mask - JFK        | Rewrite in new voice      |
| Create dialogue         | Debate                   | Characterization          |
| Outline to change       | Shadow box               | Tape a segment            |
| Double as a hero        | I'll change one thing... | Tell the empty chair      |

## **3.2 TEACHERS AS COMPOSERS**

The role of the teachers in building a learning environment use of ICT and the other focuses on the use of formative assessment play very important role for the students learning. Students are expected to master many different types of knowledge, facts, projects, calculations, problem solving and management skills. Teachers play their role as composes his complex learning environment. Teacher with pedagogical education develops and composes his learning environment together with his students.

An individualized learning theory is formed in terms of individual action and individual thoughts. A socio cultural perspectives takes into account the social quality with the way the situational

social system interactively operates to construct shared knowledge. Learning by doing which is an expression we know from Dewey, which teacher meant that collaboration is essential.

Students as future employees are going to work in project team and collaborate with a lot of different people, so that teaching based on the practical field and experience, and not on pedagogical theory. Students needed to solve different tasks for different goals, and the goals determined the method to be used.

The teacher know by his own experience that some of this content needed to be learned by memorizing the material. Subjects needed to be discussed and worked with over time, and then he designed tasks for projecting and problem solving. The teacher wanted to compose a learning environment that supported both individual learning and learning together in a context.

### **3.3 TEACHER AS CONDUCTOR**

It is pivotal significance that teachers get to know the various roles that they may or may not play during the class. To clarify, managing, organizing, promoting and assessing are the most important roles a teacher would wish to play.

#### **Managing Routines and Activities**

First of all, teachers can find themselves managers inside the class, controlling almost every minute of it. Some teachers encounter comfortableness and self-confidence when they play the role of managers since they feel that the students, that way, are ready to be inspired by them. Nonetheless, most ESL classes nowadays do not identify with so-called managers; however, any teacher should be aware of when and how to keep the class under his or her control. Secondly, teachers are susceptible to playing the role of an organizer. To exemplify, a teacher who would like to play a certain game with the students should know how to divide the students into teams or pairs, how to organize their seats as per the activities and how to give clear instructions to come up with the well-organized output. A teacher playing the role of an organizer has to build rapport with the students to help result in good organization and, hence, valid classes. In short, teachers' playing the roles of managers and organizers can be vital for producing a healthy teaching-learning process.

#### **Providing Encouragement and Assessment**

Not only can teachers find themselves managers and organizers, but they can also act like prompters and assessors. To begin with, teachers might want to give their students a push, to start an exercise or activity, for instance, which shape of modeling the first question of the exercise or triggering a specific conversation to get the students talking and producing. In this case, teachers play the role of prompters; however, teachers might tend to be aware of not spoon-feeding the students or helping them a bit too much, unnecessarily. Finally, one of the most significant functions a teacher can be identified with is assessing his or her students. Acting as assessors, teachers should notice their students' performances and put them on the right track whenever

possible. This role would require the teacher to be regularly giving feedback; therefore, teachers should be sensitive during such a process to avoid embarrassing a student or overpraising another and, thus, shun any unnecessary disturbance in the students' learning processes. In brief, prompting and assessing are two of the important roles of teachers.

### **3.4 TEACHER AS CRITIC**

Teacher's role as critic in the classroom is very important in help out the students to overcome their problems and to do better work. Teachers should be used different useful techniques for creating a right attitude toward the teaching profession and trainings students to have the right attitude towards administrators. Trainings help out the student's disciplinary control are the basic duties of the teachers.

The teachers chooses students strategically for comments, governess the flow of discussion and contributes enthusiasm interests compelling comments to build interest and makes key points and reforms students observations when necessary to make them clear to the group and connected to the learning targets. The teacher takes up the responsibility of counselling the students in various difficult situation and providing proper advice or guidance. Teacher should help out the students understanding the small ways in which a critical condition can be dealt with.

Teachers take on a variety of critic roles within the classroom in flowing ways:

- Higher order thinking skills
- Effective communication skills
- Knowledge of technology that students will need for 21st-century careers and the increased globalized environment.

An interactive teacher is by definition one that is fully aware of the group dynamics of a classroom. As Dörnyei and Murphey (2003) explained, the success of classroom learning is very much dependent on:

How students relate to each other and their teacher

What the classroom environment is

How effectively students cooperate and communicate with each other

The roles not only the teacher plays but the learners engage in

Brown, H. Douglas (2007) mentions that “teachers can play many roles in the course of teaching and this might facilitate learning. Their ability to carry these out effectively will depend to a large extent on the rapport they establish with their students, and of course, on their own level of knowledge and skills.”

According to Harmer, J. (2007), the term ‘facilitator’ is used by many authors to describe a particular kind of teacher, one who is democratic (where the teacher shares some of the leadership with the students) rather than autocratic (where the teacher is in control of everything that goes on in the classroom), and one who fosters learner autonomy (where students not only learn on their

own but also take responsibility for that learning) through the use of group and pair work and by acting as more of a resource than a transmitter of knowledge.

#### **4. ROLE OF LEARNER**

Students in Modern Classrooms don't just sit and listen -- they actively engage. Whether they are watching videos independently, or collaborating with classmates to master a new skill, they are always appropriately challenged and supported.

Students are greater ownership of their learning, builds executive-functioning and self-management skills, and makes learning fun. Evaluators at Johns Hopkins University found that, compared to students in traditional classrooms, students in Modern Classrooms were significantly more likely to:

- Enjoy learning.
- Understand what they are learning.
- Teach themselves new content and skills.
- Complete challenging assignments without giving up.

##### **4.1 RECIEVER ROLE**

In the communication process, the "receiver" is the listener, reader, or observer—that is, the individual (or the group of individuals) to whom a message is directed. The receiver is also called the "audience" or decoder. The person who initiates a message in the communication process is called the "sender." Put simply, an "effective" message is one that's received in the way that the sender intended. Problems can arise on both ends that prevent the intended message from getting through to the receiver.

"The receiver's task is to interpret the sender's message, both verbal and nonverbal, with as little distortion as possible. The process of interpreting the message is known as decoding. Because words and nonverbal signals have different meanings to different people, countless problems can occur at this point in the communication process:

"The sender inadequately encodes the original message with words not present in the receiver's vocabulary; ambiguous, nonspecific ideas; or nonverbal signals that distract the receiver or contradict the verbal message.

- The receiver is intimidated by the position or authority of the sender, resulting in a tension that prevents effective concentration on the message and failure to ask for needed clarification.
- The receiver prejudices the topic as too boring or difficult to understand and does not attempt to understand the message.
- The receiver is close-minded and unreceptive to new and different ideas.

"With the infinite number of breakdowns possible at each stage of the communication process, it is indeed a miracle that effective communication ever occurs."

Even the environment or the receiver's emotional state can affect the decoding of the message, for example, distractions in the room, discomfort on the part of the receiver, or stress or anxiety that allow the receiver to insert subtext that the sender didn't intend. Knowledge of social or cultural contexts can hinder the receiver from picking up cues or responding appropriately as well. Relational contexts can color a message, too, as messages from close friends could be received differently than a message from a work supervisor.

## **4.2 DETECTIVE ROLE**

Detective remains a descriptive title, not a position that describes your present work and displays your talents, expertise, training and experience in a certain sector.

The role of the detective is easier for the student to experience. It calls for the use of his curiosity and cunning. It is a role that uses a disguise to mask any fear of learning. The student in the detective's role can investigate a sometimes enemy at hand—the textbook. It is laced with clues and when assembled, can point to an understanding of motives and causes. Collecting the facts and discovering the “who done it” may raise questions of why it was done. Therefore, the unit's thrust is to get the student to assume the role of a detective and to use that role to investigate and question their textbook.

The first step for the student detective will be to practice gathering basic facts. Using the textbook, the student will collect certain information in the role of a newspaper reporter or nearly forgotten, Joe Friday, “Just the facts, ma'am.” The well-known event—Columbus' discovery of America—can be a starting point. The students will be asked to investigate the who, when, what, where, and how of the event. This simple exercise will build confidence in the students and help to erase any fear that the textbook may be beyond their comprehension. It will get the student inside the text covers and lay the foundation for historical inquiry.

When asking the students for their information, they should look at a picture or illustration in their book depicting the event. This will help to place the students at the scene of the event because it visibly recreates it for them. Their eyes can visualize the event as they supply the facts, thereby making the event more alive and substantial.

As student detective, the students should construct a series of questions based on their evidence. Their questions should attempt to reveal his human interests; questions, they might ask, if they could in person, as a friend. By this process, the student may be drawn closer to the person rather than to just his accomplishments. By coming to know the person, they will understand better the facts as portrayed.

## **4.3 GENERATOR ROLE**

Students working in groups is one of the most effective and efficient teaching strategies for all classrooms. There is a multitude of benefits, and students engage in learning at a higher level. Students learn how to tackle more complex problems than they could on their own. They experience others' ideas for problem-solving and combine their knowledge and skills. Students see the value in teamwork and share different perspectives.

When assigning groups, it is vital to vary the groups periodically. Teachers incorporate motivating tasks and time for enjoyment. Teachers assign tasks that are just above students' ability and that they could not figure out on their own. The students focus on relevant topics and information on real-world scenarios. The assignment and expectations must be specific and organized. The teachers ask questions that should elicit varied responses.

During this time of online instruction in education, there are many learning curves and challenges. Utilizing online groups is a great idea and promotes involvement and engagement at a higher level as it does for in-person learning. Teachers may use digital grouping organizers to assign groups to online learning environments. A few examples of digital student organizers are: Random Student Generator, Class Dojo, Random Group Maker, and the Team Shake app (Techie Teacher, 2018.) Group dynamics are different online but can be beneficial in that students are interacting with each other. Utilizing platforms such as Zoom and Google Meet enhances the experience and makes learning more engaging in that students can see and hear each other.

Reading level allows students to learn from each other. Students can be placed in ability groups where they are all performing comparably, or they can be placed in a group with a higher-level reader, two average readers, and a lower-level reader. Both types of groups have advantages and allow students to gain a deeper understanding of what they are studying. As they hear each other read and practice skills, they are exposed to more vocabulary, expression, and comprehension.

#### **4.4 FACILITATOR ROLE**

Building presence through student-facilitator interactions in course can have a powerful impact on students' cognitive and emotional engagement. Your presence has a way of capturing attention and garnering interest and can impact students' mental health and well-being.

Facilitator presence in an online course provides learners with a teacher to observe and a model for their own academic behavior. A living, breathing, immediately-present model or teacher naturally captures attention and garners interest. The human attentional system has evolved to prioritize human actions, features, and behaviors, which has given rise to a fascinating body of research on social attention. In short, people catch people's attention (e.g., Theeuwes & Van der Stigchel, 2006) and in an online learning context, the degree to which students sense the immediacy and social presence of an online facilitator predicts student affect, cognition, and motivation (Baker, 2010).

Research on student mental health and well-being indicates that many of the student-facilitator interaction strategies that we'll discuss here and in the units that follow not only build student engagement and learning, but also can help support student mental health and well-being. In a study by Baik, Larcombe, & Brooker (2019), student surveys uncovered several key areas where students experienced support or drain on their mental health. The table below lists the themes that emerged from this research, along with descriptions of those themes. We have highlighted themes where online course facilitators can have substantial impact and bolded specific areas these facilitators can influence.

## 5. CLASSROOM COMMUNICATION

**Communication** within the classroom is important in order for students to learn effectively and should be put in place from an early stage of learning. Classroom communication exists in three categories: verbal, nonverbal, and written.

**Verbal communication** refers to sending or receiving a message through sounds and languages. Teachers can address one student or the whole classroom through verbal communication. For example, a teacher may ask a student to stand up which is verbal communication.

**Non-verbal communication** refers to communicating without words through body language, gestures, facial expressions, the tone and pitch of the voice, and posture. For example, if a teacher is nodding their head while a student is speaking, this can be encouraging or show that they agree with the student.

**Written communication is sending or receiving** information through writing. For example, a teacher may arrange a written assignment for students to test their knowledge or present lecture slides or notes for complicated information.

**According to Cole and Chan**, a typical process of classroom communication (and communication in general as well) includes the following five distinct stages:

1. Formulation of message
2. Message encoding
3. Message transmission
4. Message decoding and interpretation
5. Feedback and evaluation

The communication process is made up of four main key components, these include encoding, medium of transmission, decoding, and feedback. However, there are other major two factors in this process, and these two factors are present in the form of “sender” and “receiver”, this process begins with the sender and ends with the receiver. In the classroom is also a similar concept of the communication process, this meaning of communication is related to the “messages” and “counter-messages”, which has to constitute in the teaching-learning process. It has involved mainly three main factors initiation, reception, and response that serve as feedback. This communication process has to share teacher feelings, ideas, and opinions with the students. In short, the classroom communication process is an interaction and exchange of ideas in-between teacher and students.

## USING TECHNOLOGY IN CLASSROOM COMMUNICATION

Technology provides access to information and helps in establishing contacts with teachers and students located at different locations.

1. OHP or the overhead projector
2. Audio-Video Resources
3. Computer Technology

Schmuck and Schmuck (1997) recommend that teachers be aware of things which may have a negative impact on classroom communication. The teacher should arrange opportunities for the discussion of such feelings, attitudes and expectations which remain just under the surface in classroom communication to enable learners to improve themselves and benefit from better classroom communication. They continue by listing four levels of classroom communication.

- **Spoken-unspoken messages** – Clear communication requires that spoken and unspoken messages are the same, otherwise learners will be confused by the conflicting communication.
- **Surface-hidden intentions** – This comes to the fore in competitive classrooms, where learners are outspoken about their goals to do well but hide their ambition to do better than others, using negative remarks to air their hidden intentions.
- **Work-emotional activities** – Communication regarding curriculum work in class is always influenced by feelings about the way the work is done. If such feelings are not addressed and improved over a period of time, learners may become resistant to learning and develop feelings of apathy to school work.
- **Task-maintenance functions** – Good communication in class can help a group to make progress with tasks and can ensure that group members work together in a positive atmosphere.

### Classroom Discourse

The term classroom discourse refers to the language that teachers and students use to communicate with each other in the classroom. Talking, or conversation, is the medium through which most teaching takes place, so the study of classroom discourse is the study of the process of face-to-face classroom teaching. Classroom discourse is an interaction between teachers and learners and between learners and learners. It is generally claimed to form an isolated discourse domain. Teachers and students construct an understanding of their roles and relationships, and the expectations for their involvement classroom. To be successful, students must develop the communicative competence.

## 6.TEACHER BEHAVIOR AND CLASSROOM INSTRUCTION

In simple words, the behavior maintained and demonstrated by a teacher at the time of teaching is known as his teaching behavior. Actually in the practical classroom situations, what does a teacher do with his students in terms of verbal and non-verbal behaviors is quite important for making the students achieve the desired learning experiences. Sometimes the teacher asks the students questions, explains, demonstrates, illustrates, and guides, other times he encourages them to participate and respond, diagnoses the feelings, and so on.

McNergency and Garner (1981) have defined teacher behavior as a function of the characteristics of the teacher, his environment and the task in which the teacher engages. In this way, how a teacher behaves during teaching is almost guided by his own personality (characteristics of individual teachers) and the situation or environment in which he is teaching (engaged in the teaching activities). Further, there is no doubt that desirable or undesirable behavior on the part of teacher significantly contributes towards his effectiveness or ineffectiveness. For a desirable control, guidance and direction of teaching, there must be some methods of finding out how a teacher behaves in a particular teaching-learning situation. Also, there must be some proper ways and means for bringing desirable modification in the teaching behavior for the ultimate success of the process of teaching-learning. The modification of teaching or teacher behavior essentially stands for the attempts or modification in the existing entry behavior of a teacher for helping him to attain the level of the desired terminal behavior in order to exercise his professional duties as effectively as possible

Teaching is a process performed by a person called a teacher in the classroom of a group of students for a specified period of time on a topic or subject. In this process teachers and students both interact with each other where the teacher plays a very active role sometimes as the leader of the group.

The classroom is a complex meshing of simultaneous activities and events where teacher and learner both are involved. The teacher should be able to involve his or her total being in the teaching process.

The behavior of the teacher influences that of his students, whereas at the same time students' behavior also influences that of the teacher. In the classroom, the effects of this circular communication process can be seen in the creation and maintenance of a good classroom climate and the behaviors that determine the quality of relationships and feelings. The link between teacher behavior and the student behavior (Wubbels and Levy, 1993) suggests that teachers can benefit directly from knowing how their interpersonal behavior affects student behavior.

The task of the teacher is to put a child on the right road to its own perfection and to encourage it to follow the road, watching, suggesting, helping but not imposing and interfering. There is no provision for the development of intellectual and thinking skills among students who are given less time for active participation and interaction and the teachers seem to have a very dominant role in the classroom. Unfortunately, a poorly structured classroom quickly deteriorates into a vacuous waste of time (UNDP,1997).

For Amidon, teaching is a process of interaction between the teacher and student. It is two-way traffic and a commonly shared phenomenon. He emphasizes teaching as a set of properly planned and clearly defined activities that are undertaken for the achievement of certain objectives.

Teacher behavior effects class instruction

### **Encourage high expectations**

- Set challenging goals for learning.
- Make expectations clear both orally and in writing.
- Set consequences for non-completion of work.
- Encourage students to write and speak well.
- Discuss class progress.
- Communicate importance of high academic standards.

### **Encourage cooperation among students**

- Ask students to explain difficult concepts to each other.
- Inquire into students' interests and backgrounds.
- Encourage students to prepare together for class.
- Allow students to critique each other's work.
- Create study groups and project teams.

### **Emphasize timeliness**

- Expect students to complete assignments promptly.
- Estimate and communicate the amount of time to be spent on tasks.
- Encourage rehearsal of oral presentations.
- Encourage steady work and sensible time management.

### **Give prompt feedback**

- Provide sufficient opportunities for assessment.
- Prepare classroom activities (for example, active learning exercises) that give immediate feedback.
- Return graded assignments within one week.
- Give detailed evaluations of work starting early in the term.
- Give a pre-test at the beginning of the course to assess students' background in the subject.

### **Encourage student-instructor contact**

- Adopt a demeanor that communicates that you are approachable.
- Welcome students to drop by your office. Respect diverse talents and ways of learning.

### **Encourage student involvement**

- Use diverse teaching activities. Encourage active learning. Ask students to present work to the class.
- Ask students to relate outside events to class material.

- Give students real-life situations to analyze.
- Use simulations and role-playing in class.
- Encourage students to challenge course material.
- Be sure to make clear that showing disrespect to you or other students is not appropriate.

## **7. INTERACTION ANALYSIS**

The interaction analysis is a technique for analyzing and observing the classroom behavior. It provides the structure, components and flow of behavior of classroom activities. The interaction analysis can also be used as a mechanism of feedback device for the observation and modification of teacher behavior. The pupil's teachers are trained in both theory and practice of interaction analysis for use in it as observation and feedback device. They should be well acquainted with encoding and decoding process of interaction analysis. During the teaching Practice program me, classroom teaching of teachers trainees are observed by using the interaction analysis. The record sheet of classroom observation should be given to the teacher concerned and he is asked to decode his own behavior by preparing the matrix table. The decoding process provides him own teaching components and flow of behavior.

### **Characteristics of Interaction Analysis**

The interaction analysis as an observation device may be useful for developing the following teaching behavior

1. The verbal interaction of the classroom can be made more effective and interesting.
2. Students' participation can be increased by the teacher in his teaching.
3. The teacher may shift his direct behavior into indirect behavior.
4. The creative behavior patterns can be developed by giving the awareness and the practice of interaction modes.
5. The technique can be used with another feedback device like micro teaching and simulated teaching.

### **Theoretical Assumptions of Interaction Analysis**

1. Predominance of verbal communication
2. Higher reliability of verbal behavior
3. Consistency of verbal statements
4. Teacher's influence
5. Relation between students and teacher
6. Relation between social climate and productivity
7. Relation between class-room climate and learning
8. Use of observational technique
9. Role of feedback
10. Expression through verbal statement

### **Important techniques of Interaction Analysis:**

Interaction analysis is a process of encoding and decoding the pattern of interaction between the communicator and the receiver. In the coding process a code symbol is assigned to each category of behavior and a trained observer records by jotting down code symbols. In the decoding step, a trained analyst interprets the display of code data and reconstructs the original events on the basis of the encoded data. Interaction analysis is the study of classroom climate and teaching behavior of the teacher.

Classroom interaction analysis can be used for pre service and in service education in order to help teachers improve the quality of classroom instruction. This requires some kind of objective feedback to the person who is trying to change his behavior.

### **8. Flanders' Interaction Analysis Categories System (FIACS)**

Flanders developed a system of interaction analysis to study what is happening in a classroom when a teacher teaches. It is known as Flanders Interaction Analysis Categories System (FIACS). Flanders and others developed this system at the University of Minnesota, U.S.A. between 1955 and 1960. Flanders classified total verbal behavior into 10 categories. Verbal behavior comprises teacher talk, student talk and silence or confusion.

The ten categories are mentioned as under:

1. Teacher Talk – 7 categories
2. Pupil Talk – 2 categories
3. Silence or Confusion- 1 category

Thus, the first seven categories include teacher talk. Next two categories include pupil talk. The last tenth category includes the small spans of silence or pause or confusion. The first 7 categories of teacher talk have been bifurcated into a) indirect talk,

b) Direct talk.

#### ***Teacher's Talk - 7 Categories***

##### ***A) Indirect Talk (4 Categories)***

1. Accepts Feelings
2. Praise or Encouragement
3. Accepts or Uses ideas of Pupils
4. Asking Questions

##### ***B) Direct Talk (3 Categories)***

5. Lecture

6. Giving Directions

7. Criticizing or Justifying Authority

***Pupil Talk (2 Categories)***

8. Pupil Talk Response

9. Pupil Talk Initiation

***Neither Teacher Talk nor Pupil Talk (1 Category)***

1. Silence or Pause or Confusion

**Accept feeling**

In this category, teacher accepts the feelings of the pupils.\* He feels himself that the pupils should not be punished for exhibiting his feelings. Feelings may be positive or negative.

**2. Praises or encourages**

\*Teacher praises or encourages student action or behavior. \*When a student gives answer to the question asked by the teacher, the teacher gives positive reinforcement by saying words like “good”, “very good”, “better”, “correct”, “excellent”, “carry on”, etc.

**3. Accept ideas Indirect Influence**

\*It is just like 1st category. But in this category, the pupils ideas are accepted only and not his feelings. \*If a pupil passes on some suggestions, then the teacher may repeat in nutshell in his own style or words.\*the teacher can say, “I understand what you mean” etc. Or the teacher clarifies, builds or develops ideas or suggestions given by a student.

**4. Asks questions**

\*Asking question about content or procedures, based on the teacher ideas and expecting an answer from the pupil.\*Sometimes, teacher asks the question but he carries on his lecture without receiving any answer. Such questions are not included in this category

**5. Lectures**

\*Giving facts or opinions about content or procedure expression of his own ideas, giving his own explanation or citing an authority other than a pupil.

**6. Gives directions**

The teacher gives directions, commands or orders or initiation, with which a pupil/student is expected to comply with,- Open your books.- Stand up on the benches.- Solve 4th sum of exercise 5.3.

**1. Criticizes**

When the teacher asks the pupils not to interrupt with foolish questions, then this behavior is included in this category. \*Teacher’s “what” and “why” also come under this category

## **8. Pupil's response**

\*It includes the pupils talk in response to teacher's talk

\*Teacher asks question, student gives answer to the question.

## **9. Student talk Initiation**

Talk by pupils that they initiate.

\*Expressing own ideas; initiating a new topic; freedom to develop opinions and a line of thought like asking thoughtful questions; going beyond the existing structure.

3. Silence or Pause or Confusion (1 category)

## **10. Silence or confusion**

\*Pauses, short periods of silence and period of confusion in which communication cannot be understood by the observer.

## **PROCEDURE OF OBSERVATION / ENCODING PROCEDURE**

1. The observer sits in the classroom in the best position to hear and see the participants.
2. At the end of every three seconds he decides which category best represents the communication events just completed. Thus the time involves in coding one tally for every 3 seconds, is 20 tallies in one minute, 100 tallies in 5 minutes and 1200 tallies in one hour.
3. In this process only the serial numbers of the categories are recorded.
4. The serial number of that category is recorded on the data sheet by the observer.
5. When the observation is over, the observer shifts to some other room and prepares the details on the basis of those serial numbers of the categories.
6. In this observation process, the writing of serial numbers of the categories is known as ENCODING.
7. Writing details of behavior on the basis of these categories is known as DECODING.
8. The observers should remember the serial numbers of these categories.

## **Advantages of FIACS**

1. It is an effective tool /instrument to measure the social-emotional climate in the classroom.
2. It is also used for in-service teachers.
3. It provides feedback to the pupil-teachers.
4. It is an objective and reliable method for observation of classroom teaching.
5. It is used to compare the behavior of teachers at different age levels, gender, subject etc.
6. It is much useful in team teaching and microteaching.

## **9. MICRO TEACHING**

- Teaching of a small unit of content to the small group of students (6-10 number) in a small amount of time (5-10 min.)
- To train inexperienced student-teachers for acquiring teaching skills.
- To improve the skills of experienced teachers.

### **Microteaching Cycle**

Step-I : Micro Lesson Plan (may take 2 hrs/ a day)

Step-II : Teach 5 Min.

Step-III : Feedback Session 5 Min.

Step-IV : Re-plan 10 Min.

Step-V : Re-teach another group 5 Min.

Step-VI : Re-feedback

### **Characteristics of Microteaching**

- 1) Duration of teaching as well as number of students are less.
- 2) Content is divided into smaller units.
- 3) Only one teaching skill is considered at a time.
- 4) Provision of immediate feedback.
- 5) In micro teaching cycle, there is facility of re-planning, re-teaching and re-evaluation.
- 6) It puts the teacher under the microscope
- 7) All the faults of the teacher are observed.
- 8) The problem of discipline can also be controlled

### **Skills of Micro teaching Techniques**

2. Introduction Skill
3. Skill of Probing Questions
4. Skill of Explanation
5. Skill of Stimulus Variation
6. Skill of Black-board Writing
7. Skill of Achieving Closure

### **Introduction Skill:**

- Establishing rapport with the learners

- Linking with past experiences
- link between introduction and main parts
- Use of appropriate devices/ techniques like questioning, examples, etc.

### **Skill of Probing Question**

- Probing questions are those which help the pupils to think in depth about the various aspects of the problem.
- By asking such questions again, the teacher makes the pupils more thoughtful.
- Enable the pupils to understand the subject deeply.

### **Skill of Explanation**

It involves the ability of a teacher to describe

Logically 'How', 'Why' and 'What' of concept

Precautions for skill of Explaining:

- a) In simple language.
- b) Should not be given the shape of an advice.
- c) Should be in a sequence.
- d) Should be according to the age, experience and mental level of the pupils

### **Skill of Stimulus Variation**

- Teacher movement
- Teacher gestures
- Change in voice
- Focusing
- Change in the interaction pattern
- Pausing
- Student's physical participation

### **Skill of Black-board Writing**

- Legibility
- Size and alignment
- Highlighting main points
- Utilization of the space
- Blackboard summary

- Correctness
- Position of the teacher and
- Contact with the pupils.

### **Skill of Achieving Closure**

- Questions and statements by the teacher related to the consolidation of the major points covered during the lesson
- Opportunities provided by the teacher to the pupils for linking the present knowledge with the past knowledge.
- Opportunities provided by the teacher to the pupils for applying the knowledge gained during the lesson to the new situations.
