TECHNICAL REPORT:

A technical report (Scientific Report) is a document that describes the process, progress, or results of technical or scientific research or the state of a technical or scientific research problem. It might also include recommendations and conclusions of the research.

INTRODUCTION:

- Technical reports are often prepared for sponsors of research projects.
- Technical reports are today a major source of scientific and technical information. They are prepared for internal or wider distribution by many organizations.
- There are no absolute rules about the details of report production, because every report must be totally adapted to the needs of its reader.
- Flexibility and adaptation may be useful, but only to make the report more accessible to the reader.

OBJECTIVES:

The objectives of a report identify exactly what information it covers, for whom it is written and why it should be produced; these objectives should be clear to the writer long before the process of writing starts.

It is helpful to put down in note form the precise details of the objectives and to check these details regularly until the last stages of production.

RULES OF WRITING REPORT:

- The reader is the most important person.
- Keep the report as short as possible.
- All references should be correct in all details.
- The writing should be accurate.
- The right diagram with the right labels should be in the right place for the reader.
- Reports should be checked for technical errors, typing errors.
- The report should look as good as it is.

Categorization of Material Available:

As material arrives, it should be put into one of three categories:

- ▣ Obviously important information which must go into the report because it is completely relevant to the objectives.
- ▣ Borderline information which might be useful to some readers, or which might amplify or substantiate other more important material.
- ▣ Information which is interesting (or not) to the writer, but which is not relevant to the objectives of the report.

FORMAT:

The full format of a report can be as follows:

- " " Title page.
- Summary.
- " " Table of Contents.
- " " Introduction/Scope.
- " " Procedure/ Body Text.
- " " Conclusions.
- " " Recommendations.
- " " References.
- " " Appendices.

TITLE PAGE:

The title page is the first page of the report proper which the reader will see. It should contain :

- The title and author's name.
- The report reference number and date, if available.
- The company's name and logo if desired.
- A statement of copyright if needed, and no more.

SUMMARY:

The summary (sometimes referred to as the executive summary) provides a brief overview of the substance of the report; usually no more than half a page. It is not an introduction to the topic. The summary should outline all the key features of your report, including the topic, what you did and how you did it. The summary gives the most important findings of your research or investigation.

TABLE OF CONTENT:

The contents page sets out the sections and subsections of the report and their corresponding page numbers. It should clearly show the structural relationship between the sections and subsections. A reader looking for specific information should be able to locate the appropriate section easily from the table of contents.

Number the sections by the decimal point numbering system.

INTRODUCTION:

The introduction provides the background information needed for the rest of your report to be understood. It is usually half to three-quarters of a page in length. The introduction includes:

- The background to the topic.
- A clear statement of the purpose of the report.
- A clear statement of the aims of the project.

BODY OF REPORT:

This is main part of the report, where you present your work. The introduction and conclusions act as a frame for the body only; therefore all the details of your work must be included here.

The presentation of information should flow logically so that the reader can follow the development of your project.

CONCLUSION:

The conclusions section provides an effective ending to your report. They must give some overall insight into the value of your work in general and inform the reader of what the major impact of your work is.

REFERENCES:

A reference shows that information comes from another source and also gives the details of these sources.

APPENDIXES:

Appendixes contain material that is too detailed to include in the main report, such as raw data or detailed drawings. Usually each appendix must be given a number and title.
