

Date: _____

Day: _____

Polarography

Past Papers

SHORT Questions

(i) What do you know about

✓ polarographic maxima. (2017)

(ii) How oxygen interferes in polarographic analysis? How the problem is overcome? (2017)(2019)

(iii) Describe the two factors that contribute to the electrochemical reaction in polarography. (2017)

(iv) Give the characteristics of supporting electrolyte to be used in polarography. (2019)

(v) What do you know about residual current in polarography. (2019)

(vi) Difference between cathodic current and anodic current in polarography. (2022)

Distinguish between migration current and residual current.

(vii) Distinguish between migration current and residual current (2022)

(viii) Describe the role of inert supporting electrolyte in polarography. (2022)

(ix) Give three advantages of DME. (2020)

Long Questions

(i) Explain Instrumentation in polarography. (2017)

(ii) What is meant by diffusion current? Discuss factors affecting it. (2019)

(iii) Describe various types of electrodes in polarography. (2019)

(iv) Discuss half wave potential. What information is obtained from polarographic curve? (2020)

(v) Write note on Qualitative aspect of polarographic analysis. (2020)

(vi) Discuss in detail the factor affecting the limiting current. (2022)

(vii) Polarography is applied to organic and inorganic substances. Explain its detail. (2022)
