

philosophy Notes.

(1)

→ what is definition of philosophy:- ?

The term "philosophy" means, "love of wisdom." In a broad sense, philosophy is an activity people undertake when they seek to understand fundamental truths about themselves, the world in which they live, and their relationship to the world and to

each other. ^{or} (philosophy is set of ideals, standard or beliefs used to describe behaviour and thoughts.)

e.g:- example of philosophy is

Buddhism.

(2)

→ Importance of philosophy:-?

The study of philosophy enhance a person's problem-solving capacities. It helps us to analyze concepts, definitions, arguments, and problems. It contributes to our capacity to organize ideas and issues, to deal with questions of value, and to extract what is essential from large quantities of information.

————— (3) —————

→ What is philosophy is an academic discipline?

As an academic discipline philosophy is much the same. Philosophy is the study of a variety of fundamental questions about the nature of ourselves and the world we live in. These questions

are very wide-ranging.

→ Epistemology:-

(4)

Q- what is Knowledge?

Q- Do we anything at all?

Q- How do we know what we know?

The branch of philosophy that studies the nature and ground of knowledge with reference to its units

and validity. Epistemology on the other hand is concerned with application divided into two parts: Knowledge and its

→ **Rationalism:-** Descartes was the first Rationalism.

Rationalism is the knowledge that is derived from reason and logic. Rationalism is about intuition. Mathematical knowledge is the best example of this.

→ **Empiricism:-**

Empiricism is the knowledge that is derived from experience and experimentation.

Empiricism is about visual
Concept.

The term Empiricism comes
from Greek word Emperia. ←

(5)

→ What is knowledge?

Some philosopher have
held that knowledge is
a state of mind - i.e. a
special kind of awareness of
things.

Many philosopher define
knowledge as Justified, true,
belief. (JTB).

(6)

→ What are source and
Justification of knowledge?

Beliefs arise in people for a wide variety of cause. Among them we must list psychological factor such as desires, emotional needs, prejudice, and biases of various kinds. Obviously, when beliefs originate in source like these, they don't qualify as knowledge even if true. For true beliefs to count as knowledge, it is necessary that they originate in source we have good reason to consider reliable.

They are perception, introspection, memory, reason and testimony.

→ Skepticism:-

'Skepticism' and 'Skeptical' refer to few related but different concepts. In everyday life, the definition of 'Skeptical' is usually this: to be uncertain or doubtful about a particular idea or claim, usually based on insufficient evidence for that claim.

Philosophers however, define Skepticism more broadly. Rather than questioning a particular idea, as in everyday usage, it means questioning or even denying the possibility of any knowledge.

→ Types :-

- Modified Skepticism.
- Total Skepticism.
- Academic Skepticism.

→ Metaphysics:-

Metaphysics is the branch of philosophy that examines the fundamental nature of reality, including the relationship b/w mind and matter, b/w substance and attribute and b/w potentiality and actuality.

An example: ←
metaphysics is a study of God versus the Big Bang theory.

Q. is there a God?

Q. what is truth?

Q. Do people have free wills?

→ What is reality (substance)?

The expression 'substance' is irregular in that, while it is a phrase that philosophy has given to common dialect, normal use today is no manual for its conventional essentialness. The word is generally utilized now for stuff like gold, things tangible and of value.

→ Aristotle:- State that 'substance' is most genuine and essential and most distinct feeling of the word is what is neither predictable of subject nor show in a subject; for example the individual man or steed.

→ Idealism (plato) :-

plato's idealism is plato's concept of the perfect forms that everything in material reality comes from but only as imitation of these forms. In other words, material reality is ever changing and subject to time and space, so nothing, in reality, could be perfect, as opposed to absolute and eternal Forms that are perfect or ideal.

→ Materialism :-

Materialism is also, called physcicalism, in philosophy, the view that fact (including facts about the human mind and will and the course of human history) are casually dependent upon physical processes, or even reducible to them.

→ What are time and space.?

philosophy of space and time is the branch of philosophy concerned with issues surrounding the ontology, epistemology, and character of space, and time.

materialism

→ Free will and Determinism:-

Free will:-

Free will in philosophy and science, the supposed power or capacity of humans to make decisions or perform actions independently of any prior event or state of the universe.

→ Determinism:- In philosophy and science the thesis that all events in the universe, including human decisions and actions, are usually ~~the~~ inevitable. For example, a determinist might argue that a person's genes make him or her anxious.

Ethics:-

Ethics derived from the Greek word "ethos" which means "way of living". Ethics is a branch of philosophy that is concerned with human conduct, more specifically the behaviour of individuals in society.

Q. What is good? What makes actions or people good?

Q. What is right?

Q. How should I treat others?

→ Moral Philosophy:-

Moral philosophy is the branch of philosophy that contemplates what is right and wrong.

It explore the nature of morality and examine how people should live their lives in relation to others.

Moral philosophy has three branches.

(i) meta ethics, (ii) normative ethics (iii) applied ethics.

→ What is Good?

'Good' is the most general term of positive evaluation, used to recommend or express approval in a wide range of context.

Good is generally considered to be the opposite of evil and is of interest in the study of ethics, morality, philosophy, and religion.

→ What is Goodness?

It is in the interest of moral philosophy

to adequately and accurately define the meaning of goodness. This is important bec the meaning of goodness set the foundation for an ethical theory. The branch of ethics interested in the meaning of goodness is called the value theory.

→ Utilitarianism (J.S Mill)

Mill define "Utilitarianism" as the creed that consider a particular "theory of life" as the "foundation of morals". His view of theory of life was monistic. There is one thing and one thing only, that is intrinsically desirable, namely pleasure.

→ Types:-

→ Qualitative utilitarianism:-

Qualitative utilitarianism is the branch of utilitarianism that arose from the work of J.S. Mill, an English philosopher. Qualitative utilitarianism rejected hedonic calculus and categorized 'pleasures' and 'pains' in a more qualitative manner.

→ Quantitative - - :-

Quantitative utilitarianism is concerned with aggregate utility maximization and uses a hedonic calculus to determine the rightness or wrongness of actions.

→ Ideal - - - :-

Ideal utilitarianism is based on moral values. It recognizes beauty and friendship, as well as pleasure, as intrinsic goods that one's action should aim to maximize.

→ Deontological Ethics (Kant)

Deontological is an ethical theory that uses rules to distinguish right from wrong. Deontological is often associated with philosopher Immanuel Kant. Kant believed that ethical action follows universal moral laws, such as "Don't lie. Don't steal, Don't cheat".

→ what is political philosophy?

political philosophy is the study of fundamental question about the state, government, politics, liberty, justice, property, rights, law and the enforcement of a legal code by authority. The meaning of term is itself one of the major problem of political philosophy.

→ Social contract Theory:-

Social contract Theory says that people live together in society in accordance

with an agreement that establishes moral and political rules of behavior.

Some people believe that if we live ~~according~~ according to a social contract, we can live morally by our own choice and not because a divine being requires it.

→ Plato Political Thought :-

Plato is one of the most outstanding philosophers in ancient Greece, and he is also regarded as the founder of political philosophy. He claims that democracy is a danger

due to excessive freedom.
He also argue that in
a system in which
everyone has a right to rule
all sorts of selfish people
who care nothing for the
people but are only motivated
by their own personal desires
are able to attain power.

→ What is logic:-?

Philosophy of logic
is the area of philosophy
that studies the scope
and nature of logic. It
investigates the philosophical
problems raised by logic,
such as the presuppositions
often implicitly at work in
theories of logic and in

their application.

→ What is Argument:-?

philosophy is the practice of making and assessing arguments. An argument is set of statements that work together to support another statement. Making and assessing arguments can help us get closer to understanding the truth.

→ Inductive Argument:-

An inductive argument is the use of collected instances of evidence of something specific to support a general conclusion. Inductive reasoning is used to show

the likelihood that an argument will prove true in the future.

→ Deductive Argument :- ?

A deductive argument is an argument for which the premises are offered to provide logically conclusive support for its conclusion.

→ Symbolic logic :-

Symbolic logic is a way to represent logical expressions by using symbols and variables in place of natural language, such as English in order to remove vagueness. Logical expressions (are statements) that have a truth value. They

are either true or false.

→ What is philosophy of science?

The philosophy of science is concerned with all the assumption, foundations, methods, implications of science, and with the use and merit of science. This discipline sometimes overlaps metaphysics, ontology and epistemology, viz, when it explores whether scientific result comprise a study of truth.

→ Methodology of science (Balon).

In order to test potential truths, or hypotheses, Bacon devised a method whereby scientists set up experiments to manipulate nature and attempt to prove their hypotheses wrong.

→ Hume's critique on induction.

First formulated by David Hume, the problem of induction questions our reasons for believing that the future will resemble the past, or more broadly it questions predictions about unobserved things based on previous observations.

→ Karl Popper :-

Sir Karl Popper was an Austrian philosopher, academic and social commentator. Popper is known as for his rejection of the classical inductivist views on the scientific method in favour of empirical falsification.

→ Logical Positivism :-

Logical positivism, also called logical empiricism, a philosopher movement that arose in Vienna in the 1920s and was characterized by the view that scientific knowledge is the only kind of factual knowledge and that all traditional metaphysical doctrines are to

be rejected as meaningless.

→ Thomas Kuhn :-

Thomas Kuhn was an American philosopher of science. The structure of Scientific Revolution was influential in both academic and popular circles, including the term paradigm shift.

→ Structure :- The structure of Scientific Revolutions. According to Kuhn different stages in the history of scientific thought are characterized by different scientific paradigms, or worldviews, each consisting of a body of formal theories, classic experiments, and trusted methodologies.

→ Paul Feyerabend:-

Feyerabend became ~~first~~ famous for his purportedly anarchistic view of science and his rejection of the existence of universal methodological rules. He was an influential figure in the sociology of scientific knowledge.

→ What is philosophy of social science :-?

Philosophy of social science, branch of philosophy that examines the concepts, methods, and logic of the social science. The philosophy of social

Science is consequently a
metatheoretical endeavour - a
theory about theories of social life.

→ Methodology of Positivism:-

Positivism gives rise to
Quantitative methodology. This is
methodology that involves the
collection of 'scientific' data
that is precise and based
on measurement and is
often analysed using statistics
with the intention that the
findings be generalisable.
One method used to positivist
research is the experiment.

Positivism :-

Positivism is the name for the scientific study of the social world. Its goal is to formulate abstract and universal laws on the operative dynamics of the social universe.

A law is a statement about relationship among forces in the universe. In positivism, laws are to be tested against collected data systematically.

Individualism and

Holism :-

Individualism focuses on the composition of social

System, whereas holism focuses on their structure. Neither of them is adequate, one bcz all individualism are interrelated and two bcz there are no relations without relata.

→ What is philosophy of Art:-?

philosophy of art, the study of nature of art, including concepts such as interpretation, representation and expression, and form. It is closely related to aesthetics, the philosophical study of beauty and taste. untitled (String Quilt, House top Pattern).

→ Representation in Art :-

The term "representation" suggests a type of description or portrayal of someone or something. In the visual arts this implies that the art object depicts something other than or outside itself. In some cases the mode of representation is iconic and relies on ideas or symbols.

→ Types :-

Four type of Representation in Art:-

- Realism-
- Impressionism-
- idealism
- stylization-

Art and craft :-

Art is described as an unstructured and open-ended form of work; that expresses emotions, feelings, and visions.

Craft denotes a form of work, involving the creation of physical object, by the use of hands and brain. Art relies on artistic merit whereas Craft is based on learned skills and technique.

→ Social role of Art :-

Art is believed to help children and young adult to build confidence and encourages them for empathy and acceptance of differences.

It also allows opportunity for free expression, creativity and problem-solving skills.

→ History of philosophy:-

The history of philosophy as history, then, is a discipline in which the philosophical positions, principles, and arguments of philosophers are presented, analyzed, and explained in the historical contexts of their times.

→ Ancient Greek Era:-

Ancient Greek philosophy arose in the 6th century BC, marking the end of the Greek Dark Ages. Greek philosophy continued throughout the Hellenistic period and the period in which Greece and most Greek-inhabited lands were part of the Roman Empire. Philosophy was used to make sense of the world using reason.

→ Medieval Era:-

Medieval Era philosophy is the philosophy of Western Europe from about ad 400 - 1400, roughly the period b/w the fall of Rome and the Renaissance. Medieval philosophers are the historical

Successors of the philosophers of antiquity, but they are in fact only tenuously connected with them.

→ Modern Era of Philosophy.

A period beginning in the last quarter of the 20th century when information became easily accessible through publication and through the manipulation of information by computers and computer networks.

Modern era divided into two parts.

- Analytical tradition.
- Continental tradition.

→ Analytical tradition.

Any of various

philosophical methodologies holding that clear and precise definition and argumentation are vital to productive philosophical inquiry.

→ Continental traditions :-

Continental philosophy is a term used to describe some philosophers and philosophical traditions that do not fall under the umbrella of analytical philosophy. However, there is no academic consensus on the definition of continental philosophy.

→ philosophy in practice.

Philosophy practice, is a branch in the modern

Philosophy, using philosophizing as a means for posing, analyzing and solving worldview problems that are determined on the basis of spiritual needs of a client.

philosophy and Trial of Greek philosopher Socrates:-

Socrates of Athens is among the most famous figures in world history for his contributions to the development of ancient Greek philosophy which provided the foundation for all of western philosophy. He is, in fact, known as 'father of western philosophy', for this reason.

→ What is Philosophy of mind?

Philosophy of mind is a branch of philosophy that studies the ontology and nature of the mind and its relationship with the body.

→ Dualism:-

Dualism comes in various forms, and we will be considering the most prominent, Substance Dualism. Dualism is the view that mind and matter are two different kinds of "stuff". Matter is what the physical science

deal with and is the stuff out of which all the things in the universe mentioned at the start of this chapter are made.

To see why some people believe dualism is true, it is necessary to consider the metaphysics of identity.

First principal:-

→ Leibniz's law:-

If A is identical to B, then any property of A is a property of B, or whatever is true of A is true of B.

→ Second principal.

Identity of indiscernibles:-

If A and B are identical in all respect, then they are identical objects i.e. one and the same object.
