Topic:- Data Collection Procedure

- Data Collection is a systematic process of gathering observations or measurements. Whether you are performing research for business, governmental or academic purposes, data collection allows you to gain first-hand knowledge and original insights into your research problem.

- Step 1:-

- Define the aim of your Research:-

Before you start the process of data collection, you need to identify exactly what you want to achieve. You can start by writing a problem statement: what is the practical or scientific issue that you want to address and why does it matter?

You might need to collect quantitative or qualitative data.

- Quantitative Data:-

Is expressed in numbers and graphs and is analyzed through statistical methods.

- Qualitative Data:- is expressed in words and analyzed through interpretations and categorizations

• Step 2:-

⇒ Choose your Data Collection Method:-

Based on the data you want to collect, decide which method is best suited for your research.

- Experimental research is primarily a quantitative method.
- Interviews, focus groups are qualitative methods.
- Surveys, observations and secondary data collection can be quantitative or qualitative methods.

• Step 3:-

⇒ Collect the Data:-

Data collection is the process of gathering and measuring information on variables of interest in an established systematic fashion
