TYPES OF EDUCATIONAL RESEARCH

TOPIC:

**TYPES OF RESEARCH BY
PURPOSE**

Presented by

Abida Kaleem

TYPES OF RESEARCH BY PURPOSE

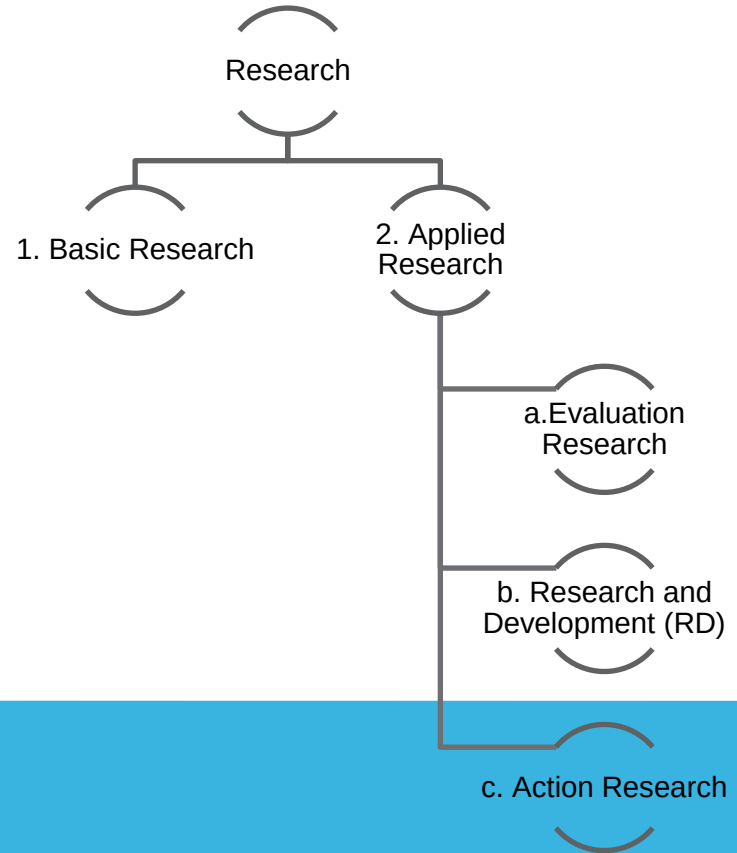

According to Gay, Mills & Airasian (2009), research can be classified into following categories on the basis of objectives or purposes:

1) Basic Research

2) Applied Research

Applied Research also divided into

- i. Evaluation Research*
- ii. Research & Development*
- iii. Action Research*

1. BASIC RESEARCH/ FUNDAMENTAL RESEARCH/ PURE RESEARCH

The basic purpose behind this type of research is

- *To develop, formulate, modify, evaluate, or to refine a theory*
- *To obtain a deep insight into the field of study*
- *Discovery of new knowledge or facts*
- *To expand, contribute or add new facts in the existing knowledge*

Theory development (to develop theory) is a conceptual process that requires many years research studies. This research has no immediate or planned utilization or application.

It follows the approach “**to generate new knowledge for knowledge sake**”.

It involves high quality research design, careful sampling, its finding has universal validity or its result generalization.

Basic research is quite costly and time-consuming. The purpose of basic research is not to impact the society at present but in the future.

APPLIED RESEARCH

Applied Research is just apply or test the theory to solve the practical problems. It provides the data to support, guide, and revise the development of the theory.

- It is used to answer a specific question that has direct application to the world.
- This research solves the social and real life problems.
- The scope of applied research is for the present and not for sometime in the future.

EVALUATION RESEARCH

Evaluation Research is most important, widely used, practical form of research.

- It is the systematic process of collecting and analyzing data about the quality(value, effectiveness, merit) of any program, product or practice.
- Evaluation Research mainly focuses on making decisions about programs, product or practices.

Evaluation Research has different forms and functions.

1) **Formative evaluation**

It occurs during the design (planning) phase when program/ product is under development. It is conducted during implementation so that weakness can be remedied.

2) **Summative evaluation**

It focuses on the overall quality(value, worth) of completed program or product.

RESEARCH & DEVELOPMENT (R&D)

Research & Development (R&D)

is the process of researching the consumer needs and then to develop the product to fulfill those needs.

The purpose of the Research & Development (R&D) in Education is to develop effective products for use in schools .e.g. learning material, teacher-training material or media material. All these products field-tested, effectiveness level is achieved. R&D is very expensive process. Quality of the product meet the specific needs of the school.

ACTION RESEARCH

Action Research in education

is any systematic inquiry conducted by teachers, principals, school counselors in teaching learning environment to gather information about the ways in which the teacher teach, the students learn.

- Its purpose is to provide teacher-researcher with a method for solving everyday problems in their own setting.
- Its results cannot be generalized or applied to other settings.
- Its goal is the solution of the given problem, not the contribution to science.
- The **teacher** is the most important part of the action research.
- The teacher-researcher's main concern is to improve the current educational process.
- Action research provides the immediate answers to problems that cannot wait for the theoretical solution.

SUMMARY: TYPES OF RESEARCH BY PURPOSE

Summary

Basic research is conducted to develop or refine theory, not to solve immediate practical problems.

Applied research is conducted to find solutions to current practical problems.

Evaluation Research The purpose of evaluation research is to inform decision making about educational programs and practices.

Research & Development

The major purpose of R&D efforts is to develop effective products for use in schools.

Action Research

The purpose of action research is to provide teacher researchers with a method for solving everyday problems in their own settings.
