◆ Also knowledge helps us to make a sense of information, it's helps us to understanding different point of views. It guides our thought process

learning, informs our analytical skills.
• knowledge is built upon a verifiable facts.

Knowledge and belief

According to classical definition:
For a person to know something, three conditions must be required;

- The person must believe the proposition and statement.
- The proposition and statement must be true.
- The person must have a valid reason to support their belief.

From above conditions we noticed that knowledge and beliefs are two distinct concepts that are often related but not identical. Both knowledge and beliefs can be based on evidence and reasoning. By knowing v knowledge the concepts

Our beliefs on our past ^{are} firm and stranger

"Rationalism is the philosophical approach that emphasizes the use of reason and innate knowledge to understand the world."

II founder of rationalism:-

1. Plato

Plato theory of forms and his emphasis on reason as the primary source of knowledge laid the ground work for rationalist thought.

2. Descartes

Descartes is often credited as the founder of rationalism. His emphasis on reason, innate ideas, the method of doubt laid the modern rationalist thought.

3. Aristotle

He is considered the one of most wise and intelligent person in the world. His emphasis on reasons and his development of logic and metaphysics also contributed to the development

Date: _____
of rationalism.

Rationalism argue that innate ideas developed on human being by birth. argue that we cannot make this observation unless we already have a concept of causation.

Empiricism:-

"Sense observation proceed the ideas Sense perceptions is authentic source of knowledge."

Empiricism believe that knowledge comes from sense experiences such as sight, sound, touch, taste and smell.

Basically, empiricism rejects the concept of plato and descartes that innate ideas developed on human being by birth.

Empiricism is believed that knowledge is based on experiences. Empiricists also believe that these experiences can be gained by using senses.

Empiricism is the theory that the origin of all knowledge is sense experienced. It emphasizes the role of experience and evidence especially sensory perception.
