

1. Definition

Expository writing is a type of writing used to explain, describe, inform, or clarify a topic in a straightforward, logical, and fact-based manner.

It focuses on delivering information rather than expressing personal opinions.

The language is clear, objective, and organized.

Example: Textbooks, news articles, user manuals.

2. Types of Expository Writing

There are several main types:

1. Descriptive – Explains something in detail, appealing to the senses.

Example: Describing the features of a smartphone.

2. Process / How-to – Explains steps to do something.

Example: A recipe or assembling instructions.

3. Compare and Contrast – Shows similarities and differences.

Example: Comparing online learning vs. Classroom learning.

4. Cause and Effect – Explains reasons and results.

Example: Causes of global warming and its effects.

5. Problem and Solution – Identifies a problem and suggests ways to solve it.

Example: Traffic congestion solutions in urban areas.

6. Definition – Explains the meaning of a term or concept.

Example: What is artificial intelligences

3. Purpose

The main purposes of expository writing are:

To inform – Provide factual details.

To explain – Make a topic clear and understandable.

To describe – Give a detailed, accurate picture.

To clarify – Remove confusion about a topic.

4. Applications

Expository writing is widely used in:

Education: Textbooks, research papers, academic essays.

Media: News reports, factual articles, informative blogs.

Workplace: Reports, presentations, procedural manuals.

Daily life: How-to guides, instructions, product descriptions.

.....

Characteristics of effective expository writing (clarity, coherence and organization)

1. Clarity

Meaning:

Clarity means the reader can easily grasp your message without confusion. Every sentence should say exactly what you intend, in the simplest and most accurate way possible.

Key Elements for Clarity:

Precise vocabulary: Use exact words rather than vague or ambiguous ones.

Simplicity: Prefer plain language over overly complex terms unless the topic demands them — and explain technical terms when used.

Concrete examples: Support abstract ideas with real-life examples or facts.

Consistent meaning: Avoid shifting definitions or using the same term in different ways within the same piece.

Example:

Unclear: “The weather phenomenon displayed significant variability.”

Clear: “The weather changed frequently throughout the week.”

2. Coherence

Meaning:

Coherence ensures that ideas in your writing flow logically and are connected in a way that makes sense to the reader. It’s about the smoothness and consistency of thought.

Key Elements for Coherence:

Logical progression: Ideas should build upon one another naturally.

Transitions: Use connecting words and phrases (“therefore,” “in contrast,” “as a result”) to link sentences and paragraphs.

Unified focus: Each paragraph should stick to one main idea that directly supports the overall topic.

Avoid abrupt shifts: Don’t jump between unrelated points without clear explanation.

Example:

Incoherent: “Solar energy is renewable. Oil prices are rising. Solar panels can be expensive.”

Coherent: “Solar energy is renewable and can help reduce dependence on fossil fuels. Although the initial cost of solar panels is high, it can save money in the long term.”

3. Organization

Meaning:

Organization refers to how information is arranged so that the reader can easily follow it. A well-organized expository text guides the reader step-by-step from introduction to conclusion.

Key Elements for Organization:

Clear introduction: States the main idea or thesis and previews the structure.

Structured body: Breaks the topic into logical sections, each developed in its own paragraph.

Paragraph unity: One main point per paragraph, supported by evidence.

Conclusion: Summarizes key points, reinforces the main idea, and leaves a clear final impression.

Formatting aids: Headings, bullet points, and numbering can help with readability in longer works.

Common Organizational Patterns in Expository Writing:

Chronological (time order)

Cause and effect

Compare and contrast

Problem and solution

General to specific (or vice versa)

Example:

If writing about climate change, you might:

1. Introduce the topic and its importance.
2. Explain causes (greenhouse gases, deforestation).
3. Discuss effects (rising temperatures, sea-level rise).
4. Present possible solutions.
5. Conclude by summarizing and urging action.

.....

Introduction to Paragraph Writing

1. Definition

A paragraph is a group of related sentences that develop a single main idea. It is the basic building block of any piece of writing, whether it's an essay, article, or story. Each paragraph focuses on one topic and organizes ideas in a logical, connected way.

2. Purpose of a Paragraph

To present one main idea clearly.

To organize information for easy reading.

To support the main idea with explanations, evidence, or examples.

To transition smoothly between different ideas in longer writing.

3. Parts of a Good Paragraph

1. Topic Sentence

States the main idea of the paragraph.

Usually appears at the beginning.

Example: "Regular exercise improves both physical and mental health."

2. Supporting Sentences

Provide facts, details, explanations, and examples that develop the main idea.

Example: "Exercise helps strengthen muscles, improves heart health, and reduces stress levels."

3. Concluding Sentence

Summarizes the idea and gives the paragraph a clear ending.

Example: “For these reasons, making time for exercise is essential for a healthy lifestyle.”

4. Characteristics of an Effective Paragraph

Unity: All sentences relate to the main idea.

Coherence: Ideas flow smoothly with logical order and linking words.

Adequate Development: The paragraph fully explains its idea, not too short or too long.

Order: Sentences are arranged logically (chronological, cause-effect, etc.)

5. Example Paragraph

Topic Sentence: Reading every day can significantly improve your vocabulary.

Supporting Sentences: When you read, you encounter new words in different contexts. This helps you understand their meanings and how to use them correctly. Over time, repeated exposure to new vocabulary makes it a natural part of your language.

Concluding Sentence: Therefore, regular reading is one of the best habits to build a stronger vocabulary.

.....

WEEK TWO

The writing process:

Pre-writing techniques (brainstorming, free-writing, mind-mapping, listing, questioning and outlining etc.)

...

Definition:

Pre-writing is the stage before drafting where you generate, explore, and organize ideas. It helps you plan your writing so it becomes clear, focused, and well-structured.

1. Brainstorming

Meaning: Quickly writing down every idea that comes to mind about a topic — without judging or organizing them.

Purpose: To generate a large pool of ideas.

Example: If your topic is “Healthy Lifestyle,” you might write: exercise, balanced diet, drinking water, sleep, stress management, avoiding junk food.

2. Free-Writing

Meaning: Writing continuously for a set period (e.g., 5–10 minutes) without worrying about grammar, spelling, or organization.

Purpose: To discover ideas and thoughts that flow naturally.

Example: Writing nonstop about “Technology in Education” without editing yourself — you might uncover points you didn’t think of before.

3. Mind-Mapping

Meaning: A visual diagram that connects ideas around a central topic using branches.

Purpose: To see relationships between ideas and subtopics.

Example: For “Climate Change” in the centre, branches could be “Causes” → “Fossil fuels, Deforestation,” and “Effects” → “Rising sea levels, Extreme weather.”

4. Listing

Meaning: Creating a simple bullet-point or numbered list of ideas or details.

Purpose: To organize points you already know into a clear form.

Example: For “Benefits of Reading,” list: improves vocabulary, increases knowledge, reduces stress, improves focus.

5. Questioning

Meaning: Asking and answering questions about your topic (often the 5Ws and 1H: Who, What, When, Where, Why, How).

Purpose: To explore the topic from multiple angles.

Example: Topic “Online Learning” —

Who benefits most?

What tools are needed?

When is it most effective?

Where can it be done?

Why is it popular?

How does it compare to in-person learning?

6. Outlining

Meaning: Arranging ideas in a structured plan before writing.

Purpose: To create a logical flow for the final draft.

Example:

1. Introduction – importance of healthy eating
2. Body Paragraph 1 – benefits for the body
3. Body Paragraph 2 – benefits for the mind
4. Body Paragraph 3 – challenges and solutions
5. Conclusion – summary and final thought

..

Drafting

Definition

Drafting is the stage of writing where you take your ideas from the pre-writing stage and start turning them into sentences and paragraphs.

It's your first attempt at putting your thoughts into a structured form — without worrying too much about perfection.

Three-Stage Process of Drafting Techniques

1. The First Draft (Rough Draft)

Purpose: To get your ideas down on paper quickly.

Characteristics:

Focus on content, not grammar or spelling.

Follow the outline or plan from the pre-writing stage.

Accept that it won't be perfect — it's just the foundation.

Tips:

Don't stop to edit every sentence.

Write freely until you complete the whole draft.

Example: Writing an essay introduction with the main idea, even if the wording is awkward, just to have something to work with.

2. Revising Draft

Purpose: To improve the content, organization, and clarity of your writing.

Characteristics:

Check if the ideas make sense and flow logically.

Add, remove, or rearrange details for better structure.

Strengthen topic sentences and supporting evidence.

Tips:

Read your draft aloud to hear awkward sentences.

Ask yourself if each paragraph supports the main idea.

Example: Moving a paragraph about “Causes of Climate Change” before “Effects” to make the order logical.

3. Editing and Proofreading Draft

Purpose: To correct mistakes and polish the writing.

Characteristics:

Fix grammar, punctuation, and spelling errors.

Check formatting and style consistency.

Remove unnecessary repetition

Tips:

Use grammar-check tools, but also read carefully yourself.

Double-check names, dates, and facts.

Example: Changing “there” to “their” or fixing sentence fragments.

Summary Table

<u>Stage</u>	<u>Purpose</u>	<u>Focus</u>	<u>Example Action</u>
<u>First Draft</u>	<u>Get ideas down</u>	<u>Content</u>	<u>Write without worrying about grammar</u>
<u>Revising</u>	<u>Improve clarity & structure</u>	<u>Organization & ideas</u>	<u>Move or add paragraphs</u>
<u>Editing</u>	<u>Correct errors</u>	<u>Language & accuracy</u>	<u>Fix spelling and grammar mistakes</u>

.....

1. Revising – Improving the content and flow

Purpose: To make your writing clear, logical, and well-organized.

When revising, check for:

Clarity: Is the meaning easy to understand? Replace vague words with precise ones.

Coherence: Do sentences and paragraphs connect smoothly? Use linking words.

Organization: Is the order of ideas logical? Rearrange if needed

Completeness: Have you given enough details and examples?

Conciseness: Remove extra or repeated words.

Example change (clarity + conciseness):

Before: The weather conditions were very, very bad.

After: The weather was terrible.

2. Editing – Correcting grammar and language errors

Purpose: To make the writing correct and polished.

When editing, check for:

Grammar: Subject–verb agreement, correct verb tense, proper sentence structure.

Spelling & Punctuation: Fix typos, missing commas, and other punctuation mistakes.

Consistency: Keep the same style, format, and terms throughout.

Word choice: Choose the most accurate and suitable words.

Example change (grammar):

Before: She go to school every day.

After: She goes to school every day.

Tip to Remember:

Revising = Big changes (ideas, order, clarity, flow)

Editing = Small changes (grammar, spelling, punctuation)

....

Proofreading

Meaning:

Proofreading is the final step of the writing process.

It's when you carefully check your finished draft to find and correct small mistakes before sharing or submitting it.

Purpose of Proofreading:

To make sure the writing is error-free.

To give the draft a professional and polished look.

To catch mistakes you may have missed during editing.

What to Check in Proofreading:

1. Spelling errors – Fix typos and wrong spellings.
2. Grammar – Ensure correct tense, agreement, and sentence structure.
3. Punctuation – Check commas, full stops, quotation marks, etc.
4. Capitalization – Names, titles, and proper nouns should start with a capital letter.
5. Formatting – Margins, font size, paragraph spacing.
6. Consistency – Same style of dates, numbers, and terms throughout.

Tips for Proofreading:

Read slowly and carefully.

Read your work aloud to hear mistakes.

Check one thing at a time (e.g., first spelling, then punctuation).

If possible, take a short break before proofreading — fresh eyes catch more mistakes.

Example:

Before: their going to meet us at the park tomorrow.

After proofreading: They're going to meet us at the park tomorrow.

....

Peer Review and Feedback

Meaning:

Peer Review: When classmates or colleagues read each other's work and give suggestions for improvement.

Feedback: The comments, advice, and evaluations you receive (or give) about the work.

It's a way to improve writing by seeing it from another person's point of view.

Purpose:

To find mistakes you may have missed.

To check if your ideas are clear, logical, and complete.

To learn new writing techniques from others.

To improve skills through both giving and receiving critique.

When Providing Feedback (as a reviewer):

Be positive first – mention strengths before pointing out problems.

Be specific – say exactly what needs improvement.

Be respectful – focus on the work, not the person.

Suggest solutions – not just point out mistakes.

Example:

X “This is bad.”

✓ “Your introduction is interesting, but you could add more examples in the second paragraph for clarity.”

When Receiving Feedback (as a writer):

Listen carefully – don’t interrupt or argue.

Be open-minded – accept constructive criticism.

Ask questions – if something is unclear.

Use the advice – revise your work based on helpful suggestions.

Benefits of Peer Review:

Improves clarity and coherence.

Helps find grammar and spelling errors.

Encourages critical thinking.

Builds teamwork and communication skills.

.....

WEEK THREE

Essay Organization and Structure

Introduction and Hook

1. What is an Introduction?

The first part of your writing.

It tells the reader what your topic is about.

It prepares them for what they will read.

A good introduction should:

Give a short background of the topic.

State the main idea (thesis).

Make the reader want to read more.

2. What is a Hook?

The very first sentence of your introduction.

Its job is to grab the reader's attention.

Makes the reader curious or interested.

Common Types of Hooks:

1. Question: "Have you ever wondered why exercise makes you happier?"
2. Interesting fact: "Your brain uses about 20% of your body's energy."
3. Quote: "Education is the most powerful weapon which you can use to change the world." – Nelson Mandela
4. Short story or example: "Last year, a small village planted 1,000 trees to fight climate change."
5. Shocking statement: "Every minute, one garbage truck of plastic is dumped into our oceans."

Example of Introduction with Hook:

Hook: "Have you ever tried to imagine a world without the internet?"

Introduction: "In today's world, the internet has become a basic need. It connects people, shares information, and supports almost every part of life."

.....

Thesis Statement

What it is:

A single sentence that tells the main idea of your writing.

It clearly states what you are writing about and your point of view.

Usually placed at the end of the introduction

Why it's important:

Gives the reader a clear direction of what to expect.

Keeps your writing focused and organized.

Acts like a roadmap for your essay or article

How to make a good thesis statement:

1. Be clear – Avoid confusing words.
2. Be specific – Focus on one main idea, not many.
3. Be direct – Don't hide your opinion or topic.

Examples:

Weak thesis: “Pollution is bad for the environment.” (Too general)

Strong thesis: “Plastic pollution harms marine life, pollutes water, and threatens human health.” (Specific and clear)

Formula for a quick thesis:

Topic + Your main point + Main reasons

Example:

“Online learning is an effective education method because it offers flexibility, saves time, and provides access to more resources.”

....

Body Paragraphs

A body paragraph is where you develop and explain one main idea that supports your thesis statement.

In an essay, the body usually has 2–4 paragraphs, each focusing on a separate supporting point.

1. Topic Sentence – The main idea of the paragraph

Purpose:

Introduces what the paragraph will be about.

Connects directly to your thesis statement.

Placement: Usually the first sentence of the paragraph.

Qualities of a good topic sentence:

Clear – No confusing or vague wording.

Specific – Focused on one idea only.

Linked – Ties back to the thesis.

Example:

Thesis: “Social media has both benefits and drawbacks for students.”

Topic sentence: “One major benefit of social media is that it helps students stay connected and share information.

2. Supporting Evidence – Proof and explanation for the topic sentence

Purpose: To explain, prove, or expand the main idea of the paragraph.

Types of supporting evidence:

1. **Facts and Statistics – e.g., “A 2023 study found that students who join online study groups score 15% higher on exams.”**
2. **Examples – e.g., “For example, students often share notes and assignments through class WhatsApp groups.”**
3. **Expert Opinions – e.g., “Education expert Dr. Ali notes that peer learning online increases motivation.”**
4. **Explanations – Describe how or why something happens.**
5. **Personal Experiences – Only if suitable for the topic.**

Rule: Every supporting detail should directly relate to the topic sentence.

3. **Transitional Devices – Connecting ideas smoothly**

Purpose: To make your writing flow naturally from one sentence/paragraph to the next.

Types of transitions:

1. **Adding information: furthermore, in addition, also, moreover**
2. **Showing contrast: however, on the other hand, although**
3. **Showing cause and effect: therefore, as a result, consequently**
4. **Giving examples: for example, for instance, such as**
5. **Showing order: first, next, then, finally**

Example in use:

“Students can easily share resources through social media groups. Furthermore, these platforms allow them to collaborate on projects in real time.”

Example of a Full Body Paragraph:

Topic Sentence: “Regular exercise improves mental health.”

Supporting Evidence:

“According to research, exercise reduces symptoms of anxiety and depression by releasing endorphins — chemicals that make people feel happier.”

“For example, a 30-minute walk can help reduce stress levels after a busy day.”

Transitional Device:

“Furthermore, regular physical activity improves sleep, which also benefits mental well-being.”

....

Conclusion

What It Is:

The final paragraph of your writing.

Summarizes the main points and gives the reader a sense of closure.

Leaves a final impression so the reader remembers your message.

Types of Concluding Paragraphs:

1. Summary Conclusion

Restates the main points of your essay in a short form.

Good for academic writing or reports.

Example: “In conclusion, social media connects people worldwide, improves learning opportunities, and supports business growth.”

2. Restated Thesis Conclusion

Repeats your thesis statement but in different words.

Reinforces the central idea.

Example: Thesis: “Exercise improves health.”

Restated: “Overall, physical activity is essential for a healthy body and mind.”

3. Call-to-Action Conclusion

Encourages the reader to take action after reading.

Often used in persuasive or opinion writing.

Example: “To protect our planet, each of us must reduce plastic use and support eco-friendly products.”

4. Prediction or Future Outlook

Suggests what might happen in the future if your advice is followed (or ignored).

Example: “If we continue to invest in renewable energy, we can look forward to a cleaner and healthier world.”

5. Quotation Conclusion

Ends with a powerful quote that matches your topic.

Example: “As Nelson Mandela said, ‘Education is the most powerful weapon which you can use to change the world.’”

Tips for Leaving an Impact

End with a strong sentence that sticks in the reader's mind.

Avoid introducing new information in the conclusion.

Use emotional or inspiring language if suitable.

Show the importance of your topic one last time.

Example Conclusion with Impact:

“Social media is not just a tool for sharing photos — it is a powerful platform for education, business, and global connection. By using it wisely, we can create a more informed and connected world. The choice is ours, and the future depends on it.”

.....

Ensuring Cohesion and Coherence

What They Mean:

Cohesion = How well your sentences and paragraphs stick together using linking words and smooth transitions.

Coherence = How clearly and logically your ideas make sense to the reader.

Think of cohesion like glue holding the sentences together, and coherence like a clear road map guiding the reader.

How to Create Seamless Connections Between Paragraphs:

1. Use transition words to link ideas:

Examples: firstly, in addition, however, therefore, as a result, on the other hand, in conclusion.

Example sentence: “Exercise improves mental health. In addition, it helps maintain a healthy weight.”

2. Repeat key ideas or words from the previous paragraph so the reader feels the flow.

Example:

End of paragraph 1: “...helps students manage time better.”

Start of paragraph 2: “Time management is also important for reducing stress.”

3. Arrange paragraphs in a logical order (chronological, cause-effect, problem-solution, etc.).
4. Stick to one main idea per paragraph so the reader doesn't get confused.

5. Check the overall flow by reading your draft out loud — if it feels jumpy, add connecting sentences.

Mini Example:

Paragraph 1 ending: “...reading improves vocabulary and comprehension.”

Paragraph 2 starting: “This improvement in comprehension also helps students perform better in exams.”

See how the idea flows naturally from one paragraph to the next? That’s cohesion + coherence in action.

.....

WEEK FOUR....

Different Types of Expository Writing

Expository writing is used to explain, describe, or inform the reader about a topic in a clear and logical way. It focuses on facts, not opinions. There are several types, each with its own purpose and style.

1. Descriptive Expository Writing

Purpose: To give a detailed picture of a person, place, object, or event so the reader can imagine it clearly.

Features: Uses vivid details, sensory language (sight, sound, smell, taste, touch), and comparisons.

Example:

A rose is a flower with soft, velvety petals. Its fragrance is sweet and calming, and its colors range from bright red to soft pink.

Where it’s used: Travel articles, museum guides, product descriptions.

2. Process or “How-To” Writing

Purpose: To explain the steps in doing something in order.

Features: Uses chronological order, clear steps, and often includes diagrams or numbered lists.

Example:

To bake a cake, first preheat your oven to 180°C. Then, mix flour, sugar, eggs, and butter until smooth. Pour into a baking tin and bake for 30 minutes.

Where it’s used: Cooking recipes, instruction manuals, DIY guides.

3. Cause and Effect Writing

Purpose: To explain why something happens (cause) and what happens as a result (effect).

Features: Shows relationships between events, uses cause–effect signal words (because, therefore, as a result, consequently).

Example:

Heavy rainfall caused flooding in the city. As a result, many roads were closed and people were evacuated.

Where it's used: Science reports, historical analyses, environmental studies.

4. Compare and Contrast Writing

Purpose: To show similarities (compare) and differences (contrast) between two or more subjects.

Features: Uses words like “similar to,” “different from,” “on the other hand,” “both,” “however.”

Example:

Cats are quiet and independent pets, while dogs are more active and social. Both require love and care, but their personalities are quite different.

Where it's used: Book reviews, product comparisons, academic essays.

5. Problem and Solution Writing

Purpose: To present a problem and suggest possible solutions.

Features: Clearly states the problem, explains why it is important, and offers practical solutions.

Example:

Plastic pollution is harming marine life. To solve this, we can reduce single-use plastics, promote recycling, and support eco-friendly packaging.

Where it's used: Opinion columns, environmental reports, policy proposals.

6. Definition Writing

Purpose: To explain the meaning of a term or concept in detail.

Features: May include examples, origins of the term, and comparisons to similar concepts.

Example:

Photosynthesis is the process by which green plants use sunlight to convert water and carbon dioxide into food (glucose) and oxygen.

Where it's used: Dictionaries, encyclopedias, textbooks.

7. Classification Writing

Purpose: To organize information into categories or groups.

Features: Explains how items are grouped and what makes each category different.

Example:

Fruits can be classified into citrus (oranges, lemons), berries (strawberries, blueberries), and tropical (mangoes, pineapples).

Where it's used: Science, marketing, organizational reports.

Summary Table for Quick Revision

<u>Type</u>	<u>Purpose</u>	<u>Example</u>	<u>Common Uses</u>
<u>Descriptive</u>	<u>Describe vividly</u>	<u>A garden full of colorful flowers swaying in the wind</u>	
	<u>Travel, product descriptions</u>		
<u>Process / How-To</u>	<u>Show steps</u>	<u>How to plant a tree</u>	<u>Recipes, manuals</u>
<u>Cause & Effect</u>	<u>Explain why/how</u>	<u>Deforestation causes climate change</u>	
	<u>Science, history</u>		
<u>Compare & Contrast</u>	<u>Show similarities/differences</u>	<u>Apple vs. Samsung</u>	<u>Reviews, essays</u>
<u>Problem & Solution</u>	<u>Suggest fixes</u>	<u>Traffic jams solved by better public transport</u>	
	<u>Policies, environment</u>		
<u>Definition</u>	<u>Explain meaning</u>	<u>What is democracy?</u>	<u>Dictionaries, textbooks</u>
<u>Classification</u>	<u>Group items</u>	<u>Types of volcanoes</u>	<u>Science, reports</u>

....

WEEK FIVE...

Writing for Specific Purposes and Audiences:

...

Different Purposes of Writing

Writers create texts for different reasons. Here are the main purposes:

1. To Inform

Meaning: To give true facts or information.

Example: A news article telling about yesterday's weather.

Where used: Textbooks, newspapers, reports.

2. To Explain / Analyze

Meaning: To make something clear or easy to understand by breaking it into parts.

Example: An article explaining how plants grow.

Where used: Science books, research papers, blogs.

3. To Persuade

Meaning: To make the reader agree with your opinion or do something.

Example: An advertisement asking people to buy a product.

Where used: Ads, speeches, opinion articles.

4. To Entertain

Meaning: To make the reader enjoy or feel emotions.

Example: A funny short story or a joke.

Where used: Novels, plays, poems.

5. To Describe

Meaning: To give a clear picture using words.

Example: Describing a sunset in detail.

Where used: Travel writing, product descriptions.

6. To Instruct

Meaning: To teach how to do something step-by-step.

Example: A recipe telling how to make cake.

Where used: Manuals, tutorials.

....

Writing for Academic Audiences

When you write for school, college, or research purposes, you are writing for an academic audience — teachers, professors, researchers, or students. This type of writing follows certain rules.

1. Formality

Use formal language — no slang, texting style, or casual words.

Write in complete sentences with correct grammar.

Avoid short forms like don't → write do not.

Example:

~~X~~ Kids these days don't care about studies.

✓ Many students today show less interest in academic activities.

2. Objectivity

Be neutral and focus on facts, not personal feelings.

Avoid “I think” or “I feel” unless necessary.

Support ideas with evidence (facts, examples, research).

Example:

~~X~~ I believe social media is bad.

✓ Studies show that excessive use of social media can harm mental health.

3. Academic Conventions

Follow the rules of academic writing, such as:

Citing sources (giving credit to authors or books you used).

Organized structure (introduction, body, conclusion).

Using clear headings and logical order.

Following a specific style guide (APA, MLA, Chicago, etc.).

Example:

Instead of copying from a book, write in your own words and then mention the author and year.

....

Writing for Public Audiences

When you write for the general public — like readers of blogs, magazines, websites, or social media — your style needs to be clear, interesting, and easy to understand.

1. Engaging Language

Catch the reader's attention right from the start.

Use simple words and short sentences.

Add stories, examples, or questions to keep interest.

Speak directly to the reader (you, we).

Example:

Instead of: Climate change poses environmental challenges.

Say: Our planet is getting hotter — and it's affecting all of us.

2. Informative Language

Give useful and accurate facts.

Explain terms that people might not know.

Use statistics, examples, and visuals when possible.

Example:

“Did you know? A single plastic bottle can take up to 450 years to decompose.”

3. Persuasive Language

Encourage readers to think, feel, or act.

Use emotional appeal (touch the heart) and logical arguments (facts and reasons).

Repeat important points so they stick.

Example:

“By switching to reusable bags, you can help save sea turtles and reduce plastic waste in our oceans.”

....

1. What is “Tone” in Writing?

Tone is the attitude or feeling the writer shows toward the subject or audience through their choice of words.

It's how you say something, not just what you say.

Examples: formal, informal, serious, humorous, respectful, encouraging.

2. What is “Style” in Writing?

Style is the way the writer expresses ideas — including vocabulary, sentence structure, and organization.

Examples: descriptive, narrative, analytical, persuasive, conversational.

3. Matching Tone & Style to Purpose and Audience

<u>Purpose</u>	<u>Audience</u>	<u>Tone</u>	<u>Style</u>	<u>Example</u>
----------------	-----------------	-------------	--------------	----------------

<u>To Inform</u>	<u>General public</u>	<u>Clear, neutral, straightforward</u>	<u>Expository style</u>	<u>with facts and examples</u>
<u>“The Earth revolves around the Sun in 365 days.”</u>				

<u>To Analyze</u>	<u>Academic readers</u>	<u>Formal, objective, precise</u>	<u>Analytical style with</u>	<u>evidence and logical reasoning</u>
<u>“The data indicates a correlation between</u>				
<u>urbanization and air quality decline.”</u>				

<u>To Persuade</u>	<u>Voters, customers, public</u>	<u>Confident, motivating, sometimes emotional</u>	<u>Persuasive style with strong arguments and calls to action</u>	<u>“Every vote</u>
<u>counts — make your voice heard this election.”</u>				

<u>To Entertain</u>	<u>Social media users, magazine readers</u>	<u>Fun, light-hearted, sometimes</u>	<u>dramatic</u>	<u>Narrative or descriptive style with humor or vivid imagery</u>
<u>“She</u>				
<u>opened the fridge, and there it was — the last slice of pizza, glowing like treasure.”</u>				

4. Tips for Choosing the Right Tone & Style

1. Know your audience – Are they students, experts, or casual readers?
2. Match your vocabulary – Simple words for the public, precise terms for experts.
3. Adjust formality – Formal for reports, informal for blogs or friendly letters.
4. Keep purpose in mind – Inform? Persuade? Entertain? Your tone should fit.
5. Stay consistent – Don’t switch from serious to joking unless it’s intentional.
6. Examples of Different Tones

Formal: “The experiment yielded conclusive results.”

Informal: “The test worked perfectly!”

Serious: “This is a matter of life and death.”

Humorous: “I tried to cook dinner, but the smoke alarm had other plans.”

Optimistic: “Tomorrow will bring new opportunities.”

Pessimistic: “It’s probably not going to work out.”

.....

WEEK SIX...

Ethical Considerations:

..

1. What is “Original Writing”?

Original writing means your work is your own — your own words, structure, and understanding — even if you use information from other sources.

It's not copied from books, websites, or other people.

It shows your thinking and how you explain ideas in your way.

2. How to Ensure Original Writing

A. Find Credible Sources

Use trustworthy sources like:

Academic books and journals

Reputable news outlets

Official reports and government websites

Avoid random blogs, Wikipedia (as a main source), or unreliable social media posts.

Tip: If you can't find the author's name, date, or publisher, it might not be reliable.

B. Evaluate Information

Before using a source, check:

1. Authority – Who wrote it? Are they an expert?
2. Accuracy – Does it have facts with proof?
3. Currency – Is it recent and up-to-date?
4. Purpose – Is it to inform, persuade, or entertain? Does it have bias?

C. Use Your Own Words (Paraphrasing)

Don't just copy — read, understand, then explain in your own way.

Keep the meaning the same but change the sentence structure and wording.

Example:

Original: "Global warming is causing glaciers to melt at an unprecedented rate."

Paraphrased: "Because of climate change, glaciers are melting faster than ever before."

D. Give Credit (Citations & References)

If you use someone else's idea, statistic, or exact words, mention the source.

Use the required format (APA, MLA, Chicago, etc.) in your work.

E. Add Your Own Analysis

After presenting information from a source, explain what you think about it.

This shows your understanding, not just a copy-paste of facts.

....

1. What is Citation and Referencing?

Citation: Brief mention inside your writing to show where information came from.

Referencing: A full list at the end of your work with complete details of each source.

They help:

Give credit to the original author.

Avoid plagiarism.

Let readers find your sources.

2. Common Citation Styles

A. APA Style (American Psychological Association)

Mostly used in social sciences (psychology, education, sociology).

In-text citation format: (Author, Year, Page)

Example in-text:

Climate change affects food security (Smith, 2020, p. 45).

Reference list example:

Smith, J. (2020). *Climate change and agriculture*. Oxford University Press.

B. MLA Style (Modern Language Association)

Mostly used in humanities (literature, history, arts).

In-text citation format: (Author Page)

Example in-text:

Climate change affects food security (Smith 45).

Works Cited example:

Smith, John. *Climate Change and Agriculture*. Oxford University Press, 2020.

C. Other Styles

Chicago Style – used in history and some sciences; allows footnotes.

Harvard Style – similar to APA, popular in many universities.

3. Key Rules for All Styles

Be consistent — don't mix styles in one paper.

Every in-text citation must have a matching reference in the list.

References should be alphabetical by author's last name.

Use proper punctuation and formatting exactly as required.

....

1. Why Integrate Quotes and Evidence?

When you write an academic or informative piece, you need proof to support your ideas.

This proof can come from:

Quoting – using the author's exact words.

Paraphrasing – rewriting the author's idea in your own words.

Summarizing – shortening the author's idea to only the main point.

Using evidence correctly:

Makes your writing stronger.

Shows you have researched well.

Avoids plagiarism (by giving credit to the source).

2. Quoting (Exact words)

Use when the exact wording is important.

Put the words inside quotation marks.

Always give in-text citation.

Example (APA):

According to Smith (2020), "Climate change is the biggest challenge of our generation" (p. 14).

3. Paraphrasing (Same idea, new words)

Rewrite the original text completely in your own words.

Keep the meaning the same.

Still give credit to the original author.

Example (APA):

Smith (2020) explains that climate change is currently the most serious issue faced by humanity (p. 14).

4. Summarizing (Main idea only)

Make the text shorter, covering only the main point.

Good for giving an overview of a large section.

Still needs a citation.

Example (APA):

Smith (2020) argues that climate change is humanity's greatest challenge.

5. Tips for Integrating Evidence Smoothly

Introduce the quote or evidence before showing it.

Explain the meaning after the quote.

Blend it into your own sentence instead of just “dropping” it.

Example:

As experts have noted, “Plastic waste takes centuries to decompose” (Brown, 2018, p. 22), which shows why urgent action is needed.

....

1. What is Plagiarism?

Plagiarism is when you use someone else's words, ideas, or work without giving them proper credit.

It's like copying homework and pretending it's yours — but in writing, it's taken very seriously.

2. Why Avoid Plagiarism? (Ethical Considerations)

Honesty – You must give credit to the person who originally wrote or said it.

Respect – Acknowledging other people's hard work.

Academic Integrity – Schools, colleges, and publishers have strict rules against plagiarism.

Trust – Readers believe you when they know your work is original and sources are reliable.

3. Best Practices to Avoid Plagiarism

A. Use Your Own Words and Ideas

Don't just copy-paste from books or the internet.

Read, understand, and then rewrite in your own way.

B. Always Cite Your Sources

Mention where you got the information (APA, MLA, or other style).

Include in-text citations and a references list.

C. Quote Correctly

Use quotation marks for exact words.

Example: “Education is the most powerful weapon” (Mandela, 1994).

D. Paraphrase and Summarize Carefully

Even if you change the words, you must still cite the source.

E. Keep Track of Sources

While researching, write down all the author names, titles, and links so you don’t forget later.

F. Use Plagiarism Checkers

Tools like Turnitin, Grammarly, or Quetext can help find accidental copying.

4. Quick Example

X Plagiarism:

Climate change is the biggest challenge of our generation.

(Copied exactly without credit)

Finish.
