

Chapter # 02

The Researching Professional

Qualities of a researcher

Following are the Qualities of a researcher :

- 1- Curiosity
- 2- Analytical ability and foresight
- 3- Determination
- 4- Friendly with respondents
- 5- Least discouragement
- 6- Accuracy
- 7- Capacity of depth information
- 8- Truthful
- 9- Keen observer
- 10- Careful in listening
- 11- Low dependency on common sense
- 12- Economical
- 13- Expert in Subject
- 14- Good in Conversation
- 15- Having clear Terminology
- 16- Trained in research tools

- 17- Analytical
 - 18- Equality and justice
 - 19- Awareness of the possible drawbacks
 - 20- Critical thinking
 - 21- Preservance
 - 22- Attention to detail
 - 23- Open-mindedness
 - 24- Ethical conduct
 - 25- problem-solving
 - 26- creativity
 - 27- Collaboration
 - 28- Honest
 - 29- Logical rationals
 - 30- organizations skills.
-

Quality

Quality is the standard of something as measured against other things of a similar kind; the degree of excellence of something.

Researcher

Researcher is a person who carry / carries out academic or scientific research.

Researcher is a person who job involves discovering or verifying information for use in a book, programme etc.

Qualities of a researcher

1- Curiosity

A researcher should possess a strong sense of curiosity and have a genuine interest in exploring new ideas and knowledge.

2- Analytical ability & Foresight

Capacity to collect and analyze data, identify patterns and anticipate future developments.

3- Determination

Persistence and resolve to complete research projects despite obstacles.

4-Friendly with Respondents

A good researcher must have the quality to become friendly with respondents. It should have to talk to them in the same in which the responding are answering and make happy made.

5-Least Discouragement

If the people are not co-operate to give correct data, the researcher should not be discouraged and face the difficulties, it would be called a good researcher.

6-Accuracy

A researcher would be said to be good, if he is accurate in his views. His ideas must be accurate one.

7-Capacity of Depth Information

A researcher should have the capacity to collect more & more information in little time.

8-Truthful

A researcher must have to be truthful. His ideas would be free from false reports and saying information.

9-Keen Observer

It is a quality of a good researcher that he may have the ideas of keen and deep observation.

10-Careful in Listening

A researcher would be more careful in listening. He would have the quality of listening very low information's even whispering.

11-Low dependency on Common Sense

A researcher should be called good if he has low dependency on common sense but keep in observation all the events and happenings.

12- Economical

Good researcher must have control over his economic resources. He has to keep his finance within limits and spend carefully.

13- Expert in Subject

A researcher would be a good one if he has full command over his subject. He makes the use of his theoretical study in field work easily.

14- Good in Conversation

The conversation of a good researcher should be sympathetic & not boring. He must have the skills and art to be liked by the people.

15- Having Clear Terminology

A good researcher's terminology would be clear. It would be free from out words to become difficult for the respondents to answer.

16- Trained in Research Tools

Research is impossible without its techniques and tools. So, it should be better for a researcher to know about the use of these tools.

17- More Analytical

A researcher would be different from other people of the society. On the basis of this quality he may observe the situation very well. Then he should be able to solve the problems easily.

18- Equality and Justice

A good researcher should believe on equality and justice. As equal to all types of people he may collect better information's from the respondents.

19- Awareness

of the possible

drawbacks

Awareness of the possible drawbacks

and shortcomings of research is very essential on the part of a good researcher. By knowing it before, the researcher may try to minimize such problems, although it is well high impossible to claim complete perfection of a research work.

20- Critical thinking

Research need to be able to analyze information and data critically, evaluating its reliability and validity. They should have the ability to make logically / logical connections, identify patterns and draw sound conclusions.

21- Perseverance

Research often involves extensive time and effort as well as facing obstacles and setbacks. Researchers need to be persistent and willing to overcome challenges in order to achieve results.

22- Attention to detail

Researchers must have a keen eye for detail and precision, as even the smallest overlooked detail can impact the validity and accuracy of research findings.

23- Open-mindedness

Being open-mindedness allows researcher to consider different perspectives and approach, encouraging innovation and creative thinking.

24- Ethical Conduct

Researchers are responsible for maintaining high ethical standards in all aspects of their work, including data collection, analysis and reporting. This involves ensuring the privacy, confidentiality, and welfare of participants.

25- Problem-Solving

Researcher often involves addressing various research questions and findings

Solutions to problems. Researchers need to be skilled in problem-solving techniques and be able to think critically and creatively to solve research-related challenges.

26- Creativity

Ability to think outside the box and find innovation / innovative solutions.

27- Collaboration

Willingness to work with others, share ideas and build on each other's strengths.

28- Honest

Truthful and transparent in collecting, analyzing and reporting data.

29- Logical and Rational

using sound reasoning evidence-based thinking and objective

analysis.

30- Organizations Skills

Ability to plan, manage and prioritize tasks, data, and resources.

Topic # 02

Teacher as a Researcher

Teacher

A teacher, formally an educator, is a person who helps students to acquire knowledge, competence, or virtue, via the practice of teaching. Informally the role of teacher may be taken on by anyone.

Researcher

Researcher is a person who carries out academic or scientific

research.

Researcher is a person whose job involves discovering or verifying information for use in a book, programme, etc.

Teacher as a researcher

The concept of teacher-as-researcher is included in recent literature on educational reform, which encourages teachers to be collaborators in revising curriculum, improving their work environment, professionalizing teaching and developing policy. One of the many benefits of teachers researching their own practices is that the teacher has a sense of ownership and control of the research because what is being researched occurs in that teacher's own class-room.

Teachers are researchers. They collect enormous amounts of data each day, and they rapidly evaluate and make decisions based on this data. Some of this work is numerical, but much is qualitative.

Teachers may be second only to doctors in doing this. What teachers are not good at doing anything formal with this data. Like a cup sitting under a running tap, more and more information is

Constantly flowing in, too much to hold. All this data could, however, be used as evidence to inform practice

A teacher can play a valuable role in conducting research, especially in the field of education.

As a researcher, a teacher can

1. Identify research questions

Through their experience in the classroom, teacher can identify areas of interest or concerns that they feel could benefit from further investigation. They can formulate research questions that are relevant to their teaching practice and needs of their students.

2. Design research studies

Teachers can design research studies to explore their research questions. They can determine the appropriate research methodology, develop data collection tools, and plan the implementation of the study. This may involve conducting surveys, interviews, observations or experiments.

3. Collect and analyze data

Teachers can gather data using various methods and tools. They can collect information on students performance, behavior, or attitudes, or they can gather data on instructional strategies or interventions. Teacher can also analyze the collected data using Statistical techniques to draw meaningful conclusions.

4. Implement interventions

Based on their research findings, teachers can develop and implement interventions or strategies to address issues identified through their research. By testing these interventions in their own class-rooms, teachers can evaluate their effectiveness and provide evidence-based recommendations for improvement.

5. Disseminate findings

Teachers can share their research findings with the educational community through academic journals,

Conferences, or presentations. By disseminating their research, teachers can contribute to the knowledge base in the field of education and inform other educators about effective strategies and interventions.

⇒ Overall, teachers as researchers can bring a unique perspective to educational research by being intimately involved in the day-to-day realities of teaching. Their research can have a direct impact on their own practice as well as on the wider educational community.

Topic # 3

Research ethics

Research ethics refers to the ethical principles and guidelines that govern the conduct of research involving human subjects or animals subjects. It involves ensuring that research is conducted in an ethical manner with respect for the rights and welfare of the subjects involved.

1. Informed Consent

Researchers must obtain informed consent from participants, meaning that participants need to be fully aware of the purpose, procedure, risks and benefits of the research and voluntarily agree to participate.

2. Privacy and Confidentiality

Researchers must ensure the privacy and confidentiality of participants' personal information.

They should take measures to protect participants identities and ensure that data are stored securely.

3. Beneficence

Researchers should prioritize the well-being and welfare of research participants. They should minimize potential risks and maximize potential benefits associated with the research.

4. Non-maleficence

Researcher should not cause harm to participants. They should take precautions to minimize any potential physical, psychological, or emotional harm or discomfort.

5. Data Manipulation & Fabrication

Researchers should not manipulate or fabricate data. They should report their findings truthfully and accurately.

6. Conflict of Interest

Researchers should disclose any potential conflicts of interest that could compromise the objectivity and integrity of their research.

Data Manipulation & Fabrication

7. Integrity and Objectivity

Researchers must ensure the accuracy and honesty of their research should (not) findings, avoids bias or conflict of interest, and report their results without distortion or misrepresentation.

8. Respect for Ethical Guidelines

Researchers should adhere to national and international ethical guidelines, such as the Declaration of Helsinki for medical research, and obtain ethical approval from Institutional Review Boards or Ethics Review Committees.

9. Animal Welfare

Date: / /20

Day:

Researcher involving animal subjects should follow ethical guidelines to minimize pain, suffering and distress.

Researchers should use alternatives to animals testing whenever possible and ensure that animals are treated humanely.

⇒ Failure to adhere to research ethics can have serious consequences, including harm to participants, damage to research integrity, legal and professional ramifications, and loss of public trust in the scientific community. Therefore, it is essential for researchers to prioritize ethical considerations throughout the research process.
