Ans: The pituitary gland is often called the master gland because it controls several other hormone glands in your body, including the thyroid and adrenal. The ovaries and testicle.

Q no 9: Define psychometrics?

Ans: psychometrics is the field of study concerned with the theory and techniques of psychological measurement, which includes the measurement of knowledge, abilities, attitudes, and personality traits. The field is primarily concerned with the study of differences between individuals.

Q no 10: (Repeat) process of Effective communication?

Ans: Effective communication leads to understanding- The communication process is made up of four key components. Those components include encoding, medium of transmission, decoding, and feedback. There are also two other factors are present in the form of the sender and receiver.

Past paper 2017

Short Questions

Qno1 :(Repeat) briefly describe the bipolar mood disorder?

Ans: Bipolar disorder formerly called manic depression, is a mental health condition that causes extreme mood swing that include emotional highs mania or hypomania and lows (depression). When you become depressed, you may feel sad or hopeless and lose interest or pleasure in most activities.

Qno2: (Repeat) Briefly Describe case study method?

Ans: Case study in psychology refers to the use of a descriptive research approach to obtain an in - depth analysis of a person, group, or phenomenon. A variety of techniques may be employed including personal interviews, direct, observation, psychometric test, and archival records.

Qno3: Explain factors influence perception process?

Ans: There are two factors of influence perception process.

1. **External factor**
2. **Internal factor**

External factor: - The external factor relate to what is to be perceived and situation. These are size, Intensity, frequency, status, etc., **internal factor:** - personality- traits influence how a person select perception.

Motivation- people will select perceptions according to what they need in the moment.

Experience -The patterns of occurrences or associations one has learned in the past affect current perceptions.

Qno4: (Repeat) Define the concept of different level of consciousness in Freud's psychotherapy?

Ans : (freud divided human consciousness into three levels of awareness).

1. Conscious.
2. Preconscious.
3. Unconscious.

Each of three levels corresponds and overlaps with Freud's ideas of the Id, ego and superego. While three elements are stored out of our awareness, they are nevertheless thought to influence our behavior.

Qno5: List down the physical change happen in emotional states?

Ans: The most obvious signs of emotional arousal involve change in the activity of the visceral motor (autonomic) system. Thus, Increases of decreases in heart rate, cutaneous blood flow (blushing or turning pale), piloerection, sweating, and gastrointestinal motility can all accompany various emotions.

Qno6: why pituitary gland called "Master gland"? Explain.

Ans: The pituitary gland is often called the master gland because it controls several other hormone glands in your body, including the thyroid and adrenals. The ovaries and testicle.

Qno7: Process of effective communication?

Ans: Effective communication leads to understanding. The communication process is made up of four key components. Those components include encoding, medium of transmission, decoding, and feedback. There are also two other factors are present in the form of the sender and receiver.

Qno8: Explain biological basis of behavior?

Ans: All human behavior is a product of biological structure and processes, highly organized on multiple interconnected levels. Understanding these biological precursors for psychological disorders, such as drugs that influence neurotransmitter function.

Q no 10: Explain James Lange theory emotions?

Ans: The James - Lange theory of emotion suggests that emotions occur as a result of physiological reaction to events, this theory suggests that seeing an external stimulus lead to a physiological reaction

Past papers 2018

Short Questions

Q no 1: difference between sensation and perception?

Ans: sensation and perception are two separate processes that are very closely related. Sensation is input about the physical world obtain by our sensory receptors, and perception is the process by which the brain select, organizes, and interprets these sensations.

Q no 2: what is school of thought, give name of three school of thought is field of psychology?

Ans: The different school of psychology represent the major theories within psychology.

- 1: Structuralism and functionalism.
- 2: The Psychoanalytic school of thought.
- 3: The humanistic school of thought.

Q no 3: what is creative thinking?

Ans: The mental processes leading to a new invention, solution or synthesis in an area - A creative solution may use preexisting elements (e.g. .. objects, ideas).

Q no 4: Briefly Describe case study Method?

Ans : Case study in psychology refers to the use of a descriptive research approach to obtain an in depth analysis of a person , group , or phenomenon .A variety of techniques may be employed including personal interviews , direct , observation , psychometric test , and archival records .

Q no 5: Define and Explain persuasion?

Ans : Persuasion the process by which a person ' s attitudes or behaviour are , without duress , influenced by communications from other people .one's attitudes and behaviour are also affected by other factors
For Example: (verbal threats, physical coercion, one's physiological states).

Q no 6: Define the concept of different level of consciousness in Freud's psychotherapy?

Ans: Freud divided human consciousness into three levels of awareness.

1. Conscious 2. Preconscious 3. Unconscious.

Each of three levels corresponds and overlaps with Freud's ideas of the Id, ego and superego .which three elements are stored out of our awareness, and they are nevertheless thought to influence our behavior.

Q no 7: List down the physical change happen in emotional stated?

Ans: The most obvious signs of emotional arousal involve changes in the activity of the visceral motor (autonomic) system. Thus, Increases of decreases in heart rate, cutaneous blood flow (blushing or turning pale), piloerection , sweating , and gastrointestinal motility can all accompany various emotions .

Q no 8: what is persuasion? How it change the behavior of other person?

Ans: persuasion the process by which a person's attitudes or behavior are, without duress, influenced by communications from other people. Persuasion aims to change behavior .It can be accomplice by altered a person attitude favorable or unfavorable view of something .That might, in turn, alter the person's disposition to act on way or another.

Q no 9: Briefly describe the bipolar mood disorder?

Ans: Formerly called manic depression, is a mental health condition that causes extreme mood swing that include emotional highs (mania or hypomania) and lows (depression). When you become depressed, you may feel sad or hopeless and lose interest or pleasure in most activities.

Q no 10: Briefly describe experimental method?

Ans: (A closer look at the experimental method in psychology). The experimental method involves manipulating one variable to determine if change in one variable cause changes in another variable .This method relies on controlled method, random assignment and the manipulation of variables to test a hypothesis.

Past papers (2019)

Short Questions**Qno1.what is the normal reaction to frustration?**
