

Commonly used Application Software

Commonly used application packages are:

1. Word Processing Packages
2. Spread Sheet
3. Database Management System
4. Electronic Communication
5. Drawing and Graphics
6. Enhanced Presentation

1. Word Processing Package:

Word processing software's are used to write letters and other text documents in computer. The computer program that provides these facilities in the computer is called word processing package.

Most popular word processing package is MS Word.

2. Spread Sheet:

These packages are used in business applications. Spreadsheet provides very efficient method of mathematic calculation on tabular data (in the form of rows and columns). Spreadsheet can also be used to take decision on the basis of data.

Most widely used spreadsheet program is MS Excel.

3. Database Management System:

A database is a collection of data stored in an organized way. These packages provide facilities for efficient storage and retrieval of data in files.

Most widely used Database Management System software's are

- MS Access
- Oracle
- FoxPro etc.

4. Electronic Communication:

We can use computers to send and receive emails through internet. Several programs are available for electronic communication.

For Example:

- Internet Explorer
- Netscape Navigator

5. Drawing and Graphics:

Computer graphics software provides the capability to transfer a series of numeric values into graphics for easier analysis and interpretation. Drawing programs are used to create graphics and images.

For Example:

- Adobe Photoshop
- Coral Draw

6. Enhanced Presentation:

A presentation program like MS PowerPoint is used to make professional presentations. These presentations can be printed or directly used on projector. You can also use these presentations on computer screen.

For Example:

- MS PowerPoint

What is System Software and Utility Program?

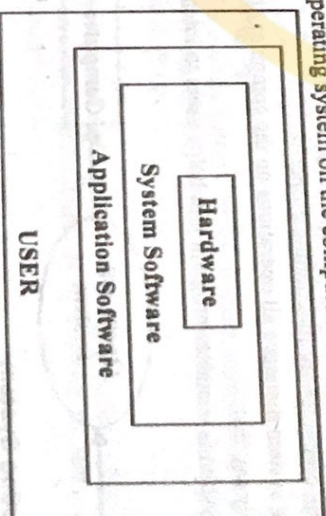

Q:

Ans: **System Software:** MS Powerpoint
System Software consists of the program that control and manage the operations of the computer and its devices.

1. System Software consists of the program that control and manage the operations of the computer and its devices.
2. It serves as an interface between the user, application program and the computer hardware.
3. No interaction is possible with computers without system software.
