General APA Format Guidelines

Title Page

There are two different versions of an (APA Title Page) the student and professional versions.

For a student title paper, include:

- Title of paper
- Name of each author of the paper (the by-line)
- Affiliation for each author (the university attended, including the name of the department)
- Course number and name
- Instructor name (check with the instructor for their preferred format)
- Assignment due date (i.e., November 4, 2020)
- Page number

For a professional APA paper, include:

- Title of paper
- Name of each author of the paper (by-line)
- Affiliation for each author
- Author note
- Running head (an abbreviated version of the paper title)
- Page number

For both student and professional papers, the paper title is in title case, bold, and centred. It should be about three to four lines down from the top margin of the page.

Be concise. Your title should be a short statement of what the reader will find in the paper. Your title will often identify the major variables and their relationships. Examples of APA paper titles include:

- Effect of Sleep Deprivation on Math Performance
- Impact of Leadership Style on Employee Productivity
- How Music Tempo Affects Running Pace

- How Medication Improves Smoking Cessation Outcomes.

A title page for a professional paper should also include an author note, which provides more information about the paper's authors, study registration, data sharing, disclaimers on any conflicts of interest, a point of contact, and funding sources.

Heading

The headings can range from the significant headings, heading 1 to the titles of the chapters. The writers use headings levels 2 to 5 for subheadings. The heading1 should use a centred, bold, title case capitalization, while heading 2 uses left-alignment, bold, and title character capitalization. Heading 3 uses indent, bold, and sentence case capitalization.

Introduction to formatting of APA

The introduction must have two aspects; the writers can include their study about the topic and the existing literature they have gone through before taking up the particular case for the research. They should also write about their proceedings, methodology, and approach while dealing with the subject. The Introduction of an APA paper should begin on a new page, following the Abstract. Because its position in the paper makes it easily identifiable, the Introduction does not require a heading. Instead, include the title of the paper at the top of the page, in upper and lower case, followed by the text. Our editors typically look for the following items in an APA Introduction:

- Background information on the topic
- An explanation of why the topic is significant
- An overview of relevant literature
- A discussion of the hypothesis
- How the author intends to address the problem
- Information on the paper's organization

The Introduction must be well organized and may contain headings to make the APA paper more understandable. Try to avoid jargon as it will only confuse your reader.

Methods

This section describes the research and how it was conducted. The method is very important because it concerns the reproducibility of the research. Reproducibility, one of the main principles of the Scientific Method, refers to the ability of a test or experiment to be replicated by independent researchers. We look for the following subsections in the Method section of an APA paper: participants (or subjects), measures, and procedures (the latter two are often combined in one subsection). These subheadings should be left-justified. The "participants" subsection should describe the subjects (including total number and their basic demographic information) and how they were selected and categorized. It should also explain why some subjects were not included. The subsection for measures and procedures should specify the equipment and materials used in the experiment, including any questionnaires or surveys. This section must also describe in detail how the research was conducted. The method must have a description of the processes followed. The examiner needs to know about the various steps that the writer followed while writing the report. It makes the whole report more credible.

Reference pages in APA format

All sources cited in your paper should be included in the reference page. The reference page should appear at the end of your APA paper. This page makes it easy for the reader to easily look up all of the materials you cited. Anything cited in the text must appear in the reference section and anything include in the reference section must be cited somewhere in the text. Your reference should be begin on a new page with the little "References" in bold and centred at the very top. Do not underline, italicize, or place quotation marks around the little.

Basic reference page rules

Be sure not to forget these rules when putting together your APA format reference page:

- Alphabetize reference by the last name of the first author of each sources.
- Capitalize all major words in the little of the journal (i.e. the journal of personality and social psychology).
- Capitalize only the first letter in article titles. If a colon appears in the little, the first letter after the colon should also be capitalized. The little should not be placed in quotations, underlined, italicized.

- Double space all reference.
- Italicized the title of books and journals.
- When the same author cited multiple times, list reference in chronological order with the oldest first, working your way up to the most recent one.
- Use a hanging indentation for each reference should be aligned to the left, but each additional line needs to be indented.

Journal and periodical

- Journal article should appear in alphabetical order in your reference list.
- More APA format tips include.
- Capitalize the first letter of the first word in the title, subtitles, and proper noun.
- Italicize name of the publication and the volume number.
- The basic format of journal article reference is to first list author by their first names. Next, the publication year is enclosed in parentheses and follow by a period.
- The title of the article should then follow, with only the first letter of the first word capitalized as well as the first of the any proper nouns.
- The italicize title of the journal comes after, followed by a comma. Place the volume number next, also italicized.
- Follow this with the issues number in parentheses, followed by a comma.
- Then, place page number, using a hyphen in between if it's a range of pages. Place a period after this. Finally, a hyperlink include the DOI number should be included if there is one available.

Books

This style is applicable to printed text. The format for citing books in APA format is as follows:

- Name of author (last name, first initial).
- The date of the publication in parentheses.
- The italicized title of the book.
- If applicable, put the edition of the book in parentheses.
- Publisher name.
- Hyperlink with DOI number.
- **Note:** place a period after each of these elements

In text criterion

For the APA criteria, the in-text criteria is a must. The writers must include the name of the author and date of the work in the in-text criteria. Include an in-text criteria when you refer to, summarize, paraphrase, or quote from another source. For every in-text criteria in your paper, there must be a corresponding entry in your reference list. APA in-text criteria style uses the author's last name and the year of publication, for example: (Field, 2005). For direct quotations, include the page number as well, for example: (Field, 2005, p. 14). For sources such as websites and e-books that have no page numbers, use a paragraph number. More information on citing sources without pagination is given on the APA Style web page.

Example of in-text criteria

A few researchers in the linguistics field have developed training programs designed to improve native speakers' ability to understand accented speech (Derwing, Rossiter, & Munro, 2002; Krech Thomas, 2004). Their training techniques are based on the research described above indicating that comprehension improves with exposure to non-native speech. Derwing et al. (2002) conducted their training with students preparing to be social workers, but note that other professionals who work with non-native speakers could benefit from a similar program.

General guidelines

In-text references should immediately follow the title, word, or phrase to which they are directly relevant, rather than appearing at the end of long clauses or sentences. In-text references should always precede punctuation marks. Below are examples of using in-text criteria.

- **Author's name in parentheses:**

One study found that the most important element in comprehending non-native speech is familiarity with the topic (Gass & Varonis, 1984).

- **Author's name part of narrative:**

Gass and Varonis (1984) found that the most important element in comprehending non-native speech is familiarity with the topic.

- **Group as author:**
 1. First criteria: (American Psychological Association [APA], 2015)
 2. Subsequent criteria: (APA, 2015)
- **Multiple works:** (separate each work with semi-colons)

Example: Research shows that listening to a particular accent improves comprehension of accented speech in general (Gass & Varonis, 1984; Krech Thomas, 2004).

- **Direct quote:** (include page number and place quotation marks around the direct quote)

Example: One study found that “the listener's familiarity with the topic of discourse greatly facilitates the interpretation of the entire message” (Gass & Varonis, 1984, p. 85).

Example 2: Gass and Varonis (1984) found that “the listener’s familiarity with the topic of discourse greatly facilitates the interpretation of the entire message” (p. 85).

Note: For direct quotations of more than 40 words, display the quote as an indented block of text without quotation marks and include the authors’ names, year, and page number in parentheses at the end of the quote.

For example: This suggests that familiarity with non-native speech in general, although it is clearly not as important a variable as topic familiarity, may indeed have some effect. That is, prior experience with non-native speech, such as that gained by listening to the reading, facilitates comprehension. (Gass & Varonis, 1984, p. 77)
